ERROR CODE TABLES

[Controller Software : Ver.2.20.*]

How to refer to error codes

In an error code with eight digits, the upper two digits may change as described below. Therefore, when you search an error code from the error code table, use the lower six digits.

Error code system

abcccccc

a [The first digit from the left]	The first one digit will be used to distinguish robots when two or more robots are controlled. The error code table attached to this manual includes errors that start from eight. 8: A master robot. A robot if only one robot is used. 9: The first robot in slave robots. A: The second robot in slave robots. B: The third robot in slave robots.
b [The second digit from the left]	This digit expresses an error level from 0 to 5. Note that the same error may be different error levels in normal tasks and supervisory tasks. The error code table attached to this manual expresses the errors in normal tasks only.
c [The third or lower from the left]	These digits express the error content.

Example)

Error code "8150006B"

8: Robot is a "Master".

1: Error level is "Level 1".

50006B: The error content is "Command isn't executable while program is edited".

Error Level

The controller issues 6 levels of errors. Each level has different action of the controller.

Error Level	Description	Robot Motion	Tasks	Motor Power	I/O
Error level 0	Minor error (warning)	Normal	Normal	Status quo	None
Error level 1	Minor error (Recoverable error by error handling)	Pause	Pause all tasks	Status quo	Output warning
Error level 2	Warning in robot	Pause	Pause all tasks	Status quo	Output warning
Error level 3	Abnormal condition in robot	All stop	Reset-stop all tasks	OFF	Anomalous power
Error level 4	E-STOP error	All stop "E-STOP"	Reset-stop all tasks	OFF	Anomalous power
Error level 5	Catastrophic failure	All stop "E-STOP"	Reset-stop all tasks	OFF	Anomalous power

RC7 code

RC7 codes listed on the error code table show codes which are used when outputting an error number by a dedicated I/O.

For detail, refer to the System Input/Output Signals Manual, "Error Readout (0100)" in Standard Mode or "Error number (output)" in RC3 compatible mode.

An empty cell is convert to "230*"("*" shows error level) when output.

Error code [81608FFF]

[81608FFF] is an error code that occurs when running a program with providers. This error code indicates an error that is not supported in RC8 series has been issued.

For details, see "Provider Errors" in "PROVIDER GUIDE".

How to output error codes to I/O

Mode	Output timing	Destination	Output area and format
Standard mode	Executing "Error Read (0100)", which is an IO command, will output an error code.	RC7 code (16bits output)	On the status area of the system output, an RC7 Code will be displayed. You can check an RC7 Code in the Error Code Tables. In the Error Code Table, if an outputted error's RC7 Code cell is empty, 230* will be issued (the asterisk represents an error level).
		RC8 series code (32bits output)	When an error occurs, an error code written in the Code column in the Error Code Table will be outputted to the user output area you have specified.
RC3 Compatible mode	Output automatically when an error occurs.	RC7 code (12bits outputs)	The lower 12-bit of the RC7 Code in the Error Code Table will be outputted to the error area of the system output. (Example: 0x2187 >0x187) In the Error Code Table, if an outputted error's RC7 Code cell is empty, 30* will be issued (the asterisk represents an error level)
		RC8 series code (32bits output)	When an error occurs, an error code written in the Code column in the Error Code Table will be outputted to the user output area you have specified.

To use an RC8 series Code (32-bit output), you need to specify the output area beforehand.

For details, refer to "32bit Error Code Output IO No" in the "Displaying and Changing I/O Parameters" under the OPERATION GUIDE.

Code	RC7 Code	Message	Level	Description	Remedy
80800001		Operation panel main page (Main.pns) is not found.	0	The main page (Main.pcs) necessary for TP panel display is not found.	Send main page from WINCAPS3.
85800010		Failed to start teach pendant communication software.	5	Catastrophic failure occurred during TP communication software startup.	Reboot robot controller and motor driver power supply. If the error still occurs, contact DENSO WAVE service.
85800011		Failed to initialize Teach pendant.	5	Catastrophic failure occurred during TP software startup.	Restart robot controller and motor driver power supply. If the error still occurs, contact DENSO WAVE service.
82800012		Failed to initialize 3DView.	2	Failed to initialize 3D display function. 3D function is disabled.	Confirm whether the hardware is compatible with 3D display function. Use 3D-compatible hardware and restart robot controller.
85800013		No valid license.	5	No valid license.	Please register a license, when it already has a license. Please contact DENSO WAVE service, when you do not have a license.
85800014		Failed to initialize application.	5	Failed to initialize application.	Restart robot controller and motor driver power supply. If the error still occurs, contact DENSO WAVE service.
85800015		Failed to create CaoEngine.	5	Failed to create CaoEngine.	Restart robot controller and motor driver power supply. If the error still occurs, contact DENSO WAVE service.
85800016		Failed to connect VRC.	5	Failed to connect VRC.	Restart robot controller and motor driver power supply. If the error still occurs, contact DENSO WAVE service.
85800017		Failed to initialize controller.	5	Failed to initialize controller.	Restart robot controller and motor driver power supply. If the error still occurs, contact DENSO WAVE service.
85800018		Failed to load language DLL.	5	Failed to load language DLL.	Restart robot controller and motor driver power supply. If the error still occurs, contact DENSO WAVE service.
85800019		Failed to load DLL.	5	Failed to load DLL.	Restart robot controller and motor driver power supply. If the error still occurs, contact DENSO WAVE service.
8080001A		Failed to initialize screen saver.	0	Failed to initialize screen saver.	Restart robot controller and motor driver power supply. If the error still occurs, contact DENSO WAVE service.

Code	RC7 Code	Message	Level	Description	Remedy
81800100		Impossible to display MsgBox without Teach Pendant.	1	MsgBox is displayed only in the Teach pendant.	Connect TeachPendant.
81800101		Impossible to display MsgBox while TP is disconnected.	1	Impossible to display MsgBox when TP is disconnected.	Connect TeachPendant.
81800102		The maximum number that can be displayed in MsgBox is exceeded.	1	Exceeded the number of displayable MsgBoxes at one time.	Reduce the number to display the MsgBox.
81800103		MsgBox source task execution has not been started.	1	Impossible to display MsgBox when the source task is not running.	Start the task where MsgBox runs.
81800104		Impossible to display MsgBox without RemoteTP or VirtualTP.	1	MsgBox is displayed only in RemoteTP or VirtualTP.	Use of RemoteTP or VirtualTP is necessary.
81800200		Failed to connect DENSO Robot Imaging Library.	1	Failed to connect DENSO Robot Imaging Library.	
80800201		An error occurred during the execution of the Software Trigger.	0	An error occurred during the execution of the Software Trigger.	
80800202		An error occurred during the execution of the Image Refresh.	0	An error occurred during the execution of the Image Refresh.	
81800203		Failed to initialize DENSO Robot Imaging Library.	1	Failed to initialize DENSO Robot Imaging Library.	
80800204		An error occurred in the preservation of the built-in visual data.	0	An error occurred in the preservation of the built-in visual data.	
85800205		Failed to connect to Teach pendant normally.	5	Communication between the teach pendant and the controller failed. The following causes are likely. 1. Broken, short-circuited or contact-failed teach pendant cable. 2. Teach pendant failure.	Check the following items first. Connect the teach pendant, and then reboot the controller. If the problem still occurs, contact to DENSO WAVE service. 1. The pendant cable isn't damaged or short-circuited, and properly connected to the teach pendant. 2. Teach pendant isn't damaged.
83800206		Failed to connect to Teach pendant normally. (2)	3	Communication between the teach pendant and the controller failed. The following causes are likely. 1. Broken, short-circuited or contact-failed teach pendant cable. 2. Teach pendant failure.	Check the following items first. Connect the teach pendant, and then reboot the controller. If the problem still occurs, contact to DENSO WAVE service. 1. The pendant cable isn't damaged or short-circuited, and properly connected to the teach pendant. 2. Teach pendant isn't damaged.
83600001		There is no procedure to start.	3	The task entry procedure Sub Main is not defined.	Revise the program and create Sub Main procedure.

Code	RC7 Code	Message	Level	Description	Remedy
83600002		Invalid procedure name.	3	Specified procedure name is not defined.	Revise the program and specify the existing procedure name.
83600003		Invalid procedure arguments.	3	The number or the type of the procedure argument is invalid.	Revise the number or the type of the argument to meet with the definition of the procedure.
83600004		Unmatching arguments count.	3	The number of the arguments of the function or the procedure does not match.	Revise the program and specify the correct number of arguments.
83600005		The procedure that has ByRef argument is not allowed to be called.	3	It is impossible to pass arguments with ByRef attribute because the value may be variable when referred.	Change the attribute of the argument from ByRef to ByVal, or use a global variable to pass the value.
80600006		Invalid line number to start.	0	Specified line number is incorrect.	Revise the program to specify an executable line.
81600007		Argument is incorrect	1	Specified argument is incorrect.	Revise the number or the type of the argument to meet with the specification.
81600008		Short of arguments	1	The number of the arguments of the function or the procedure is not enough.	Revise the program and specify the correct number of arguments.
81600009		Too much arguments	1	The number of the arguments of the function or the procedure is too much.	Revise the program and specify the correct number of arguments.
8160000A		The first argument is incorrect	1	The value or the variable of the 1st argument is incorrect.	Revise the value range or the variable type of the argument, and correct it.
8160000B		The second argument is incorrect	1	The value or the variable of the 2nd argument is incorrect.	Revise the value range or the variable type of the argument, and correct it.
8160000C		The third argument is incorrect	1	The value or the variable of the 3rd argument is incorrect.	Revise the value range or the variable type of the argument, and correct it.
8160000D		The 4th argument is incorrect	1	The value or the variable of the 4th argument is incorrect.	Revise the value range or the variable type of the argument, and correct it.
8160000E		The 5th argument is incorrect	1	The value or the variable of the 5th argument is incorrect.	Revise the value range or the variable type of the argument, and correct it.
8160000F		The 6th argument is incorrect	1	The value or the variable of the 6th argument is incorrect.	Revise the value range or the variable type of the argument, and correct it.
81600010		The 7th argument is incorrect	1	The value or the variable of the 7th argument is incorrect.	Revise the value range or the variable type of the argument, and correct it.
81600011		The 8th argument is incorrect	1	The value or the variable of the 8th argument is incorrect.	Revise the value range or the variable type of the argument, and correct it.
81600012		The 9th argument is incorrect	1	The value or the variable of the 9th argument is incorrect.	Revise the value range or the variable type of the argument, and correct it.
81600013		The 10th argument is incorrect	1	The value or the variable of the 10th argument is incorrect.	Revise the value range or the variable type of the argument, and correct it.

Code	RC7 Code	Message	Level	Description	Remedy
83600014	2003	Value is out of range	3	The argument value is out of range.	Revise the program to assign the argument value within its range.
83600015		Fig is out of range	3	Fig value is out of range.	Revise the program to assign the fig value within its range.
83600016		Failed to run task	3	Specified task is not executable, or not created.	Revise the program of specified task and save it so that it can be executed solely.
80600017		This line can't be setup.	0	Non-executable line is specified.	Revise the execution line
83600018		Internal error: Failed to access variable	3	Unexpected process was executed.	Restart the controller. If the error still occurs, please contact to DENSO WAVE service.
81600019		Reached to the limit.	1	Impossible to create a new object because the number of object have reached the maximum.	Limit the number of the objects which can be created simultaneously.
8160001A		Not executable on error condition.	1	Mutex object is in error state.	Please remove the error factor of the task which the error raised during exclusive operation execution. Or please reset the error condition of the mutex object by ResetMutex statement.
8160001B		Invalid ID.	1	An object corresponding to the specified ID is not found.	Specify a correct ID.
8360001C		Stack overflowed.	3	The stack size reached the maximum.	Revise the loop process. If it runs as you planned, increase the VM stack size.
8360001D		Stack underflowed.	3	Stack count went below zero.	Revise the loop process. If it runs as you planned, increase the VM stack size.
8360001E		Pass start displacement distance is out of range.	3	Pass start displacement distance is out of range.	Revise the program so that the Pass start displacement distance will be within the available range.
8160001F		Program stopped during provider running.	1	Program stopped during provider running due to stop processing. (Emergency-stop, Error occurred, mode switching, Protective-stop, Enable-auto Signal, etc.)	Start the program again.
83600020		Robot Index is out of range	3	Robot Index value is out of range.	Revise the program to assign the Robot Index value within its range.
81600021		Reached to the limit.	1	Impossible to create a new object because the number of object have reached the maximum.	Please limit the number of the objects which can be created.
81600022		Invalid ID.	1	An object corresponding to the specified ID is not found.	Specify a correct ID.
81600023		Reached to the limit of Queue.	1	Impossible to append a new element because the number of Queue have reached the maximum.	Reduce the element count of Queue.

Code	RC7 Code	Message	Level	Description	Remedy
80600024		Specified Hand number is not effective.	0	Hand number is invalid.	Revise the program or validate the hand number.
83601001		* Missing End If corresponding to If	3	End If statement is missing, or, not declared after If <condition> Then statement.	Revise the correspondence of "If <condition> Then" and "End If".
83601002		* Missing End If corresponding to ElseIf	3	End If statement is missing, or, not declared after ElseIf <condition> Then statement.	Revise the correspondence of "ElseIf <condition> Then" and "End If".
83601003		* Missing End If corresponding to Else	3	End If statement is missing, or, not declared after Else statement.	Revise the correspondence of "Else" and "End If".
83601004		* Missing Next corresponding to For	3	Next statement is missing, or, not declared after For statement.	Revise the correspondence of For and Next.
83601005		* Missing Wend corresponding to While	3	Wend statement is missing, or, not declared after While statement.	Revise the correspondence of While and Wend.
83601006		* Missing Loop corresponding to Do	3	Loop statement is missing, or, not declared after Do statement.	Revise the correspondence of Do and Loop.
83601007		* Missing End Select corresponding to Select	3	End Select statement is missing, or, not declared after Select statement.	Revise the correspondence of "Select Case" and "End Select".
83601008		* Procedure * declares different argument type	3	The type of the argument passed to the function or the procedure is not matching with the declaration.	Confirm the declaration of the function or the procedure, and specify the correct argument type.
83601009		* Procedure table registration failure	3	Memory is insufficient to register new table.	Restart the controller. If the error still occurs, please contact to DENSO WAVE service.
8360100A		* Array index number for argument * must be constant	3	The index of the array declaration is incorrect.	Use a constant value for array declaration index.
8360100B		* Argument * is already registered	3	The same name argument is already registered.	Don't use duplicated name for argument declaration.
8360100C		* Procedure * is already registered	3	It is impossible to register the procedure because the name duplicates the existing procedure name.	Check the procedure definition and use a non-duplicated name.
8360100D		* Specify index of array with constant	3	The index of the array declaration is incorrect.	Use a constant value for array declaration index.
8360100E		* Index of array must be more than zero.	3	The index of the array declaration is incorrect.	Revise the array declaration and use the value of 0 or more for the index.
8360100F		* Variable * is already registered	3	Variable declaration is duplicated.	Check the variable declaration and use non-duplicated name.
83601010		* Label * is already registered	3	Label name is duplicated.	Check the label declaration and use non-duplicated name.

Code	RC7 Code	Message	Level	Description	Remedy
83601011		＊Label ＊ is not defined	3	Specified label is not found.	Revise the program and declare the specified label definition.
83601012		＊Specify start port number of defio with a constant	3	DefIO start port number is not specified with a constant.	Check the Defio declaration and use a constant value for start port number.
83601013		＊Mask must be a constant	3	DefIO mask is not specified with a constant.	Check the Defio declaration and use a constant value for mask.
83601014		＊Variable definition of Variable ＊ is incorrect.	3	Variable declaration syntax error.	Revise the variable declaration to meet with syntax specification.
83601015		＊Invalid initial value of variable ＊.	3	Invalid initial value is assigned to the variable declaration.	Revise the variable declaration and assign the appropriate constant for the variable type.
83601016		＊Array variable ＊ can not be initialized with initial value.	3	Invalid array declaration.	Delete initial value assignment in the array declaration, and initialize the array value with value assignment code.
83601017		＊Impossible to use due to Reserved name(＊).	3	The name is reserved word.	Use non-reserved name.
83601018		＊Syntax error ＊	3	Unrecognizable syntax is used in the program.	Revise the program to eliminate the syntax error.
83601019		＊ ＊ Value of parameter is out of range.	3	Specified parameter is incorrect.	Revise the parameter value and specify the value within the expected range.
8360101A		＊File size is out of range.	3	File size is too big.	Divide the program so that each file size does not exceed its upper limit.
8360101C		＊Invalid variable. You can't use the type of ＊ for static attribute.	3	This variable type can't be static.	Change the variable type to I, F, D, V, P, J, T or S.
8360101D		＊Variable ＊ is used before definition	3	The variable is used before its declaration.	Declare the variable before it is used.
8360101E		＊Can't allocate Static variable.	3	You cannot register static variable anymore.	Please delete unnecessary global variables and other static variables.
83601020		The initial value assignment of the array is incorrect.	3	Can't specify arrays that have more than two dimensions as initial values at the declaration.	Initialize the value of two or more dimensions array by an executable code.
83601021		The number of elements of the initial values of the array is incorrect.	3	Too many elements of the initial values.	Confirm the number of elements or the initial values of the array.
83601022		The initial value assignment of the variable is incorrect.	3	Can't specify an array in the initial value. This variable is not the array.	Confirm the format of the initial value.
83601023		＊Type name(＊) is invalid.	3	Invalid type is assigned in the variable declaration.	Confirm the format of the variable type.
83601025		＊Robot＊ is not specified.	3	Robot is not specified.	Specify a robot.

83602020		* Only IO type is allowed.	3	Invalid variable type is specified.	Revise the variable type and change to the appropriate type.
83602021		* Only integer or real type are allowed.	3	Invalid variable type is specified.	Revise the variable type and change to the appropriate type.
83602022		* Array dimension is invalid	3	Invalid variable type is specified.	Revise the variable declaration and specify an array variable with appropriate dimensional counts.
83602023		* ＊ is not array type	3	Invalid variable type is specified.	Revise the variable declaration and specify array type variable.
83602024		* Fig is out of range	3	Fig value is not within the possible range.	Revise the program and change the value of Fig into the possible range.
83602025		* ＊ is not defined	3	Specified name of function or variable is not found.	Revise the program and define a function or a variable with the specified name.
83602026		* Array element is invalid	3	Invalid variable type is specified.	Revise the variable declaration and specify appropriate numbers of elements variable.
83602027		* Internal error:Popped Hand object node	3	Unexpected operation was executed.	Restart the controller. If the error still occurs, please contact to DENSO WAVE service.
83602028		* Internal error:Popped Pass node	3	Unexpected operation was executed.	Restart the controller. If the error still occurs, please contact to DENSO WAVE service.
83602029		* The operation of a vector is illegal	3	To calculate the vector and scalar, specify vector on the left, scalar on the right.	Revise the variable declaration and specify array type variable.
8360202A		* Right-hand side of + operation: typename of the immediate value is not specified.	3	Typename of (element1, element2,...) is not omittable.	Revise the immediate value type's typename that is omitted. Correct the typename.
8360202D		Incorrect syntax. '[' cannot be specified.	3	The specified brackets are incorrect.	Check the available bracket types. Use appropriate brackets.
8360202E		Incorrect syntax. '(' cannot be specified.	3	The specified brackets are incorrect.	Check the available bracket types. Use appropriate brackets.
8360202F		This command is not available in CC8.	3	This command is not available in CC8.	Revise the program.
83603001		* Unmatching argument type	3	The argument type is incorrect.	Revise the argument type and specify the type matching the declaration.
83603002		* Only VECTOR, POSITION or TRANS type are allowed.	3	Invalid variable type is specified.	Revise the variable type and change to the appropriate type.
83603003		* Assigned value must be an integer or a real	3	Invalid value is specified.	Change assign value to integer or real type.

Code	RC7 Code	Message	Level	Description	Remedy
83603004		＊ Only POSITION type is allowed.	3	Invalid variable type is specified.	Revise the variable type and change to the appropriate type.
83603005		＊ Only POSITION or TRANS type are allowed.	3	Invalid variable type is specified.	Revise the variable type and change to the appropriate type.
83603006		＊ Joint number must be an integer or an real	3	Invalid joint number is specified.	Revise the joint number and specify the appropriate value.
83603007		＊ Only JOINT type is allowed.	3	Invalid variable type is specified.	Revise the variable type and change to the appropriate type.
83603008		＊ Assigned value must be a VECTOR type	3	Invalid variable type is specified.	Revise the variable type and change to the appropriate type.
83603009		＊ Only TRANS type is allowed.	3	Invalid variable type is specified.	Revise the variable type and change to the appropriate type.
8360300A		＊ This operation is not available to String.	3	The specified operator is not applicable to strings.	Revise the program and use an appropriate operator.
8360300B		＊ String can't be assigned	3	Invalid variable type is specified.	Revise the variable type and change to the appropriate type.
8360300C		＊ ElseIf has no corresponding If	3	If statement is missing or not properly declared.	Revise the correspondence of "If <condition> Then" and "ElseIf", and correct the grammar of the sentence.
8360300D		＊ Else has no corresponding If	3	If statement is missing or not properly declared.	Revise the correspondence of "If <condition> Then" and "Else", and correct the grammar of the sentence.
8360300E		＊ End If has no corresponding If	3	If statement is missing or not properly declared.	Revise the correspondence of "If <condition> Then" and "End If", and correct the grammar of the sentence.
8360300F		＊ Next has no corresponding For	3	For statement is missing or not properly declared.	Revise the correspondence of "For" and "Next", and correct the grammar of the sentence.
83603010		＊ Exit For is at the outside of For−Next	3	For − Next statement is missing or not properly declared.	Revise the correspondence of "For" and "Next", and describe "For Exit" at the inside of the For − Next loop.
83603011		＊ Wend has no corresponding While	3	While statement is missing or not properly declared.	Revise the correspondence of "While" and "Wend", and correct the grammar of the sentence.
83603012		＊ Loop has no corresponding Do	3	Do statement is missing or not properly declared.	Revise the correspondence of "Do" and "Loop", and correct the grammar of the sentence.
83603013		＊ Both Do and Loop have respective conditional expressions.	3	Do − Loop statement is grammatically not correct.	Set a conditional expression for "Do" or for "Loop".

Code	RC7 Code	Message	Level	Description	Remedy
83603014		＊Exit Do is at the outside of Do-Loop	3	Do – Loop statement is missing or not properly declared.	Revise the correspondence of ″Do″ and ″Loop″, and write ″Do Exit″ at the inside of the For – Next loop.
83603015		＊Case has no corresponding Select	3	Select statement is missing or not properly declared.	Revise the correspondence of ″Select″ and ″Case″, and correct the grammar of the sentence.
83603016		＊Operator of the Case statement is wrong	3	The operator can't be used in Case statement.	Revise the ″Case″ statement and specify appropriate operator.
83603017		＊Case-Else has no corresponding Select	3	Select statement is missing or not properly declared.	Revise the correspondence of ″Select″ and ″Case Else″, and correct the grammar of the sentence.
83603018		＊End Select has no corresponding Select	3	Select statement is missing or not properly declared.	Revise the correspondence of ″Select″ and ″End Select″, and correct the grammar of the sentence.
83603019		＊Syntax error. Use Exit Sub.	3	Exit Sub is used by mistake in ″Function – End Function″ statement.	Check the definition of the procedure and correct the ″Exit″ statement.
8360301A		＊Syntax error. Use Exit Function.	3	Exit Function is used by mistake in ″Sub – End Sub″ statement.	Check the definition of the procedure and correct ″Exit″ statement.
8360301B		＊Only 0 or label name are allowed.	3	Jump destination of GoTo statement is not correctly specified.	Specify GoTo 0 or <Label Name>
8360301C		＊Internal error: Failed to calculate a plane from the specified three points	3	Unexpected process was executed.	Restart the controller. If the error still occurs, please contact to DENSO WAVE service.
8360301D		＊Only POSITION type is allowed.	3	Invalid variable type was specified.	Revise the variable type and change to the appropriate type.
8360301E		＊Assigned values must be IO type	3	Invalid variable type was specified.	Revise the variable type and change to the appropriate type.
8360301F		＊Event procedure must have the following form Sub　＊(ByVal Sender As Object, ByVal Args As Variant)	3	Event procedure definition is incorrect.	Check the event procedure definition.
83603020		＊Only VECTOR type is allowed.	3	Invalid variable type is specified.	Revise the variable type and change to the appropriate type.
83603021		＊Only JOINT type is allowed.	3	Invalid variable type is specified.	Revise the variable type and change to the appropriate type.
83603022		＊Argument is incorrect	3	Specified argument is incorrect.	Revise the value, type and range of the parameter, and then change it to the appropriate value.
83603023		＊Short of arguments	3	The number of argument is incorrect.	Revise the specification. Enter appropriate numebr of arguments.

Code	RC7 Code	Message	Level	Description	Remedy
83603024		＊Too much arguments	3	The number of argument is incorrect.	Revise the specification. Enter appropriate numebr of arguments.
81603025		＊Pass Start Displacement is incorrect.	1	Pass Start Displacement is not correctly specified.	Revise the specification and correct Pass Start Displacement.
81603026		＊Extended-joint Option is incorrect.	1	Extended-joint Option is not correctly specified.	Revise the specification and correct Extended-joint Option.
83603027		＊Too much arguments of SPEED Option.	3	The number of argument is incorrect.	Revise the specification. Enter appropriate numebr of arguments.
83603028		＊Too much arguments of ACCEL Option.	3	The number of argument is incorrect.	Revise the specification. Enter appropriate numebr of arguments.
83603029		＊Too much arguments of SYNC Option.	3	The number of argument is incorrect.	Revise the specification. Enter appropriate numebr of arguments.
8360302A		＊SYNC Option is incorrect.	3	Invalid Option (SYNC) is specified.	Revise the specification. Enter an appropriate option.
8360302B		＊Robot Index is duplicated.	3	Specified Robot Index is incorrect.	Revise the value of Robot Index of the specified Follower and Leader and then change it to the appropriate value.
8360302C		＊The Option is incorrect.	3	Invalid Option is specified.	Revise the specification. Enter an appropriate option.
8360302D		＊Only IO type is allowed to specify Mode option.	3	Invalid variable type is specified to apply Mode.	Revise the variable type and change to the appropriate type.
8360302E		＊The Mode Option value is out of range.	3	Invalid value is specified.	Revise the specification and assign an appropriate value.
8360302F		＊NEXT Option is incorrect.	3	Invalid Option (NEXT) is specified.	Revise the specification. Enter an appropriate option.
83603030		＊Cannot specify target positions consecutively.	3	The number of argument is incorrect.	Revise the specification. Enter appropriate numebr of arguments.
83603031		＊Pass Start Displacement is incorrect.	3	For three or more cooperative motion, you can not specify anything other than @0,@e,@c.	Revise the specification. Enter an appropriate option.
83603032		＊Cannot specify PTP motion together with SyncMove option.	3	In the case of use SyncMove option, cannot specify PTP motion.	Revise the specification. Enter an appropriate interpolation method or motion option.
83604FFF		＊Syntax error, unexpected '＊'.	3	Unrecognizable syntax is used.	Revise and correct the grammar of the error line to comply with the language specifications.
83605001		＊Real is out of range	3	Specified value is incorrect.	Revise the specification and assign an appropriate value.
83605002		＊Integer is out of range	3	Specified value is incorrect.	Revise the specification and assign an appropriate value.
83605003		＊String is unclosed	3	String format is incorrect.	Revise the correspondence of '"' and '"' to match two of them.

Code	RC7 Code	Message	Level	Description	Remedy
83605004		＊ End of file in the middle of string	3	String format is incorrect.	Revise the correspondence of '″' and '″' to match two of them.
83605005		Can't open file: ＊	3	Specified file is not exist or is not accessible.	Revise the file name and specify the existing file name.
83605101		＊ Cannot open Include file: ＊	3	Specified file is not exist or is not accessible.	Revise the file name and specify the existing file name.
81605102		＊ Macro name is defined with over 64 characters.	1	Macro name length exceeds the upper limit.	Define the macro name within 64 characters.
83605103		＊ ＊ Macro is already defined	3	Macro definition is duplicated.	Revise macro definition and use non-duplicated name.
83605104		＊ Can not open Import file: ＊	3	Specified file is not exist or is not accessible.	Revise the file name and specify the existing file name.
83605105		＊ Can not evaluate macro : ＊	3	Specified macro is undefined or not evaluable by pre-processor.	Revise macro definition and define as a constant.
83605106		＊ Can not divide by zero	3	Division by zero occurred.	Revise macro definition and eliminate division by zero.
83605109		＊ Macro ＊ is defined recursively, or too many macro definitions are applied continuously.	3	Macro definition is reentrant or exceeds the upper limit.	Revise the macro definition.
8360510B		＊ #Elif, #ElseIf has no corresponding #If, #Ifdef, #Ifndef	3	#If, #Ifdef, #Ifndef statement is missing or not properly declared.	Revise the correspondence of ″#If, #Ifdef, #Ifndef <condition>″ and ″#Elif, #Elseif″, and correct the grammar of the sentence.
8360510C		＊ #Else has no corresponding #If, #Ifdef, #Ifndef	3	#If, #Ifdef, #Ifndef statement is missing or not properly declared.	Revise the correspondence of ″#If, #Ifdef, #Ifndef <condition>″ and ″#Else″, and correct the grammar of the sentence.
8360510D		＊ #Endif has no corresponding #If, #Ifdef, #Ifndef	3	#If, #Ifdef, #Ifndef statement is missing or not properly declared.	Revise the correspondence of ″#If, #Ifdef, #Ifndef <condition>″ and ″#Endif″, and correct the grammar of the sentence.
8360510E		＊ Missing #Endif corresponding to #If	3	#Endif statement is missing, or, not declared after #If <condition> statement.	Revise the correspondence of ″#If <condition>″ and ″#Endif″.
8360510F		＊ Missing #Endif corresponding to #Elif, #Elseif	3	#Endif statement is missing, or, not declared after #Elif, #Elseif <condition> statement.	Revise the correspondence of ″#Elif, #Elseif <condition>″ and ″#Endif″.
83605110		＊ Missing #Endif corresponding to #Else	3	#Endif statement is missing, or, not declared after #Else statement.	Revise the correspondence of ″#Else″ and ″#Endif″
83605111		＊ Missing #Endif corresponding to #Ifdef	3	#Endif statement is missing, or, not declared after #Ifdef <condition> statement.	Revise the correspondence of ″#Ifdef <condition>″ and ″#Endif″.

Code	RC7 Code	Message	Level	Description	Remedy
83605112		＊ Missing #Endif corresponding to #Ifndef	3	#Endif statement is missing, or, not declared after #Ifndef <condition> statement.	Revise the correspondence of ″#Ifndef <condition>″ and ″#Endif″.
836051FF		Internal error: Complie error occurred.	3	Unexpected operation was executed.	Restart the controller. If the error still occurs, please contact to DENSO WAVE service.
83605201		＊ Robot number is out of range	3	Invalid robot number is specified.	Check the available robot number, and then change the specified robot number to appropriate one.
83605202		＊ Hand number is out of range	3	Invalid hand number is specified.	Check the available hand number, and then change the specified hand number to appropriate one.
83605203		＊ Integer is out of range	3	Specified value is incorrect.	Revise the specification and assign an appropriate value.
83605204		＊ IO variable index is out of range	3	Specified value is incorrect.	Check the I/O assignment range, and change to the appropriate index number.
83605205		＊ Global variable index is out of range	3	Specified value is incorrect.	Check the number of global variables, and specify the appropriate number.
83605206		＊ Undefined global variable	3	Unexpected operation was executed.	Restart the controller. If the error still occurs, please contact to DENSO WAVE service.
83605207		＊ Real is out of range	3	Specified value is incorrect.	Revise the specification and assign an appropriate value.
83605208		＊ Invalid character code for identifier exists.	3	Invalid character code is included in the program.	Revise the program, and then remove invalid character codes.
83605209		＊ String is unclosed	3	String format is incorrect.	Revise the correspondence of '″' and '″' to match two of them.
8360520A		＊ File was closed in the middle of string	3	String format is incorrect.	Revise the correspondence of '″' and '″' to match two of them.
8160520B		＊ Label name is defined with over 64 characters.	1	Label definition is invalid.	Define the label name within 64 characters.
8360520C		Can't open Include file: ＊	3	Specified file does not exist or is not accessible.	Revise the file name and then specify the existing file name.
8160520D		＊ Syntax error. ElseIf should not include a space.	1	Description of ElseIf statement is incorrect.	Remove a space between Else and If.
8160520E		＊ Syntax error. EndIf need to include a space.	1	Description of End If statement is incorrect.	Insert at least one space character between End and If.
8360520F		＊ Robot number is out of range	3	Invalid robot number is specified.	Check the available robot number, and then change the specified robot number to appropriate one.

Code	RC7 Code	Message	Level	Description	Remedy
81608FFF		Exception occurred.	1	Invalid process is executed.	Revise the operation and specified parameters, and then perform appropriate operation and parameter assignment.
81608001		Invalid parameter.	1	Specified parameter is invalid.	Revise the value, type and range of the parameter, and change it to the appropriate value.
81608002		Access denied.	1	Invalid process is executed.	Revise the operation and specified parameters, and then perform appropriate operation and parameter assignment.
81608003		No interface was supported.	1	Specified parameter is invalid.	Revise the value, type and range of the parameter, and change it to the appropriate value.
81608004		Unknown interface.	1	Specified parameter is invalid.	Revise the value, type and range of the parameter, and change it to the appropriate value.
81608005		Member not found.	1	Specified parameter is invalid.	Revise the value, type and range of the parameter, and change it to the appropriate value.
81608006		Parameter not found.	1	Specified parameter is invalid.	Revise the value, type and range of the parameter, and change it to the appropriate value.
81608007		Type mismatch.	1	Specified parameter is invalid.	Revise the value, type and range of the parameter, and change it to the appropriate value.
81608008		Unknown name.	1	Specified parameter is invalid.	Revise the value, type and range of the parameter, and change it to the appropriate value.
81608009		No named arguments	1	Specified parameter is invalid.	Revise the value, type and range of the parameter, and change it to the appropriate value.
8160800A		Wrong variable type	1	Specified parameter is invalid.	Revise the value, type and range of the parameter, and change it to the appropriate value.
8160800B		Out of range	1	Specified parameter is invalid.	Revise the value, type and range of the parameter, and change it to the appropriate value.
8160800C	2003	Invalid index	1	Specified parameter is invalid.	Revise the value, type and range of the parameter, and change it to the appropriate value.
8160800D		Unknown language	1	Specified parameter is invalid.	Revise the value, type and range of the parameter, and change it to the appropriate value.
8160800E		Memory is locked	1	Specified parameter is invalid.	Revise the value, type and range of the parameter, and change it to the appropriate value.
8160800F		Invalid number of parameters	1	Specified parameter is invalid.	Revise the value, type and range of the parameter, and change it to the appropriate value.
81608010		Parameter is not optional	1	Specified parameter is invalid.	Revise the value, type and range of the parameter, and change it to the appropriate value.

Code	RC7 Code	Message	Level	Description	Remedy
81608011		Invalid callee.	1	Specified parameter is invalid.	Revise the value, type and range of the parameter, and change it to the appropriate value.
81608012		Does not support a Collection	1	Specified parameter is invalid.	Revise the value, type and range of the parameter, and change it to the appropriate value.
81608013		Divided by zero	1	Specified parameter is invalid.	Revise the value, type and range of the parameter, and change it to the appropriate value.
81608014		Buffer is too small	1	Specified parameter is invalid.	Revise the value, type and range of the parameter, and change it to the appropriate value.
81608015		Timeout occurred.	1	Failed to finish the process within prdetermined time.	Revise the process, and set timeout duration longer, if necessary.
81608016		Not implemented.	1	Unexpected operation was executed.	Restart the controller. If the error still occurs, please contact to DENSO WAVE service.
81608017		Run out of memory	1	The used memory in the controller reached the upper limit.	Take the following actions. 1. Delete unnecessary tasks. 2. Reduce local variable number. 3. Reduce VM stack size setting, and restart the task.
81608018		The data necessary to complete this operation is still unavailable.	1	You cannot execute the process before the data preparation completes.	Save the program and recreate task. If the error still occurs, reboot the controller.
81608019		Invalid pointer.	1	Unexpected operation was executed.	Restart the controller. If the error still occurs, please contact to DENSO WAVE service.
8160801A		Invalid handle.	1	Unexpected operation was executed.	Restart the controller. If the error still occurs, please contact to DENSO WAVE service.
8160801B		Operation aborted.	1	Processing operation was forcibly aborted.	If an error occurs, clear the error. Reboot the controller.
8160801C		Unspecified error.	1	General error was reported from the inside of the system.	Revise the operation and specified parameters, and then perform appropriate operation and parameter assignment.
8160801D		Catastrophic error.	1	Unexpected operation was executed.	Restart the controller. If the error still occurs, please contact to DENSO WAVE service.
8160801E		Connection failed.	1	Failed to establish communication.	Make sure that the connection parameters and communication settings are correct, cables are connected properly, the specified port number has not used already. After that, reboot the controller.
8160801F		Transmit aborted.	1	Processing operation was aborted.	If an error occurs, clear the error. Reboot the controller.

Code	RC7 Code	Message	Level	Description	Remedy
83608020		You cannot start program because a syntax check is not done.	3	The program before the syntax check cannot be started.	Perform syntax check, and restart the program.
81608021		Specfied Public variable is not found.	1	The public variable is not found in the task.	Revise the program and declare the public variable in the specified task.
81608022		A designated task is not started.	1	The task declaring the public variable has not been started yet.	Compile the specified task.
81608023		Impossible to access because it is not Public attribute.	1	You cannot access specified variable because it is not declared as Public.	Revise the program and declare the variable as Public type.
81608024		The number of the dimensions in arrays are different.	1	Public variable array count does not match the argument array count.	Revise the program and match the array count of Public variable and argument.
83608025		Panel task can't be started directly.	3	Panel task is started automatically by opening the panel screen.	Open the corresponding panel screen to start the panel task.
83608026		No license.	3	License information is not registered.	Please register a license if you already have it. If not, please contact DENSO WAVE service.
81608027		Communication connection is not established.	1	Communication connection is not established.	Check the communication status with Com.State function.
81608028		Specified communication connection is already used.	1	Specified value is incorrect.	Revise the number, type and value range of the argument, and then correct argument.
81608029		Not enough memory available to restore static variables. Memory is insufficient to restore static variables.	1	Static memory area is insufficient.	Secure enough static memory area, for example, by deleting unused global variables.
8160802A		The number of elements for each dimension of the array is different.	1	The number of elemets for each dimension of the Public variable array does not match the number of elements for each dimension of the argument.	Revise the program so that the element counts on each dimensions of Public variable arrays matches with the element counts on each dimensions of argument arrays.
8360802B		Trace code does not exist.	3	Impossible to restart the program from the current line because the trace code is OFF	Please run the program from the top.
8160802C		Teach pendant is not connected.	1	You cannot execute without connecting a Teach pendant.	Execute after connecting a Teaching peandant.
8160802D		Teach pendant or Mini pendant is not connected.	1	You cannot execute without connecting a Teach pendant or a Mini pendant.	Execute after connecting a Teaching or Mini peandant.
8560802E		Too much number of dimensions	5	Stack overflow.	Revise the program and then restart the controller. If the error still occurs, please contact to DENSO WAVE service.

Code	RC7 Code	Message	Level	Description	Remedy
8160802F		Calling of StackRepair statement is illegal.	1	StackRepair was called without executing StackMemorize.	Call StackMemorize before executing StackRepair.
85609FFF		FRAM exception occurred.	5	Unexpected operation was executed while accessing FRAM data area.	Restart the controller. If the error still occurs, please contact to DENSO WAVE service.
85609001		Inconsistency of FRAM data area was detected.	5	FRAM data might not be properly saved while controller power was shutdown.	Restart the controller. If the error still occurs, please contact to DENSO WAVE service.
85609002		FRAM data area is uninitialized or broken.	5	Inconsistency was found in FRAM data area.	Restart the controller. If the error still occurs, please contact to DENSO WAVE service.
83609003		Variable buffer is insufficient.	3	Specified numbers of variables can't be set because of insufficient variable area.	Revise the numbers of variables so that the total variable size does not exceed the upper limit.
83609004		The number of variables exceeded the maximum limit.	3	Variable number range is from 0 to 2147483647	Specify the value within the range.
83609005		The variable is locked.	3	Access was denied because the variable area is in use.	Please access after the variable area size is changed.
83609101		Static variable related error occurred.	3	A static variable related error occurred in the controller system.	Revise the operation and specified parameters, and then perform appropriate operation and parameter assignment.
85609102		Failed to initialize static variables.	5	An error occurred in static variable area initialization.	Restart the controller, or initialize the Static variable area. If the error still occures, please contact DENSO WAVE service.
85609103		Failed to terminate the static variables.	5	An error occurred in static variable termination process.	Restart the controller, or initialize the Static variable area. If the error still occures, please contact DENSO WAVE service.
83609104		Failed to get the reserved area size of static variables.	3	An error occurred while calculating static variable reserved area size.	Restart the controller, or initialize the Static variable area. If the error still occures, please contact DENSO WAVE service.
83609105		Failed to get the free area size of static variables.	3	An error occurred while calculating static variable free area size.	Restart the controller, or initialize the Static variable area. If the error still occures, please contact DENSO WAVE service.
83609106		Impossible to allocate Static variable.	3	You cannot register static variable anymore.	Please delete unnecessary global variables and other static variables.
83609107		Failed to release static variables.	3	An error occurred while releasing static variables.	Restart the controller, or initialize the Static variable area. If the error still occures, please contact DENSO WAVE service.

Code	RC7 Code	Message	Level	Description	Remedy
83609108		Failed to write static variables.	3	An error occurred while writing static variables.	Restart the controller, or initialize the Static variable area. If the error still occures, please contact DENSO WAVE service.
83609109		Failed to read static variables.	3	An error occurred while reading static variables.	Restart the controller, or initialize the Static variable area. If the error still occures, please contact DENSO WAVE service.
8360910A		Failed to get static variable reservable ID.	3	An error occurred while acquiring the minimum static variable ID.	Restart the controller, or initialize the Static variable area. If the error still occures, please contact DENSO WAVE service.
8360910B		Failed to optimize static variables.	3	An error occurred while optimizing static variables.	Restart the controller, or initialize the Static variable area. If the error still occures, please contact DENSO WAVE service.
8360910C		Failed to output map file.	3	An error occurred while outputting static variable map file.	Restart the controller, or initialize the Static variable area. If the error still occures, please contact DENSO WAVE service.
8360910D		Failed to get map file name.	3	An error occurred while getting static variable map file name.	Restart the controller, or initialize the Static variable area. If the error still occures, please contact DENSO WAVE service.
8360910E		Failed in pre-processing of source initialization for static variables.	3	An error occurred while pre-processing source code initialization for static variables.	Restart the controller, or initialize the Static variable area. If the error still occures, please contact DENSO WAVE service.
8360910F		Failed in post-processing of source initialization for static variables.	3	An error occurred while post-processing source code initialization for static variables.	Restart the controller, or initialize the Static variable area. If the error still occures, please contact DENSO WAVE service.
83609110		Failed in compile pre-processing for static variables.	3	An error occurred in compile pre-process for static variables.	Restart the controller, or initialize the Static variable area. If the error still occures, please contact DENSO WAVE service.
83609111		Failed in compile post-processing for static variables.	3	An error occurred in compile post-process for static variables.	Restart the controller, or initialize the Static variable area. If the error still occures, please contact DENSO WAVE service.
83609112		Failed in post-processing of source delete for static variables.	3	An error occurred in source deletion pre-process for static variables.	Restart the controller, or initialize the Static variable area. If the error still occures, please contact DENSO WAVE service.
83609113		Failed in directory delete post-processing for static variables.	3	An error occurred in source deletion post-process for static variables.	Restart the controller, or initialize the Static variable area. If the error still occures, please contact DENSO WAVE service.

81500027		The 10th argument is incorrect	1	The 10th argument is incorrect	Revise the 10th program argument.
81500028		Invalid IP address	1	The specified IP address is invalid.	Revise the IP address assignment.

Code	RC7 Code	Message	Level	Description	Remedy
81500029	2031	Failed to find a file.	1	File isn't found.	Revise the file assignment.
8350002A		Program checked as "use" has syntax error	3	A program where the [Use] has been checked at the controller start-up is automatically checked its syntax. Syntax error has been detected in the [Use]-checked program.	Correct the syntax error of the program, or remove the programs with syntax errors from the project by unchecking the "use".
8350002B	3A00	Over 100 errors. Syntax check is aborted.	3	Syntax check is aborted because there are more than 100 errors.	Correct the syntax error of the program, or remove the programs with syntax errors from the project by unchecking the "use".
8350002C		All programs have stopped.	3	All programs were Reset-stop because some tasks in the program were still running while the file was being changed or deleted.	Stop programs and then try again.
8350002D		All TSRs have stopped.	3	All TSRs have been stopped because a file was deleted or changed while TSR was running.	Stop TSR and then try again.
8350002E		Panel task has stopped.	3	Panel task has stopped because a task was deleted or changed while it was still running.	Stop panel task and then try again.
8350002F		This operation is not available to header files.	3	You tried to execute operations prohibited for header files.	Do not execute this operation on header files.
83500030	73C1	You cannot set break points anymore.	3	You tried to register more breakpoints than the maximum limit.	Remove unnecessary breakpoints, and then try again.
83500031		Exceeded the maximum registration number of programs	3	You tried to register more than the maximum number of programs.	Revise the program to reduce the number of registered programs.
83500032	73EE	Impossible to execute. (Exceeded the maximum number of tasks executable simultaneously)	3	The maximum number of programs that are executable simultaneously has been exceeded.	Revise the program in order to reduce the number of programs running simultaneously.
85500033		Backup data is abnormal	5	Failure occurred in the backup data.	Please contact to DENSO WAVE service.
83500034		Illegal pair of GoSub and Return	3	Illegal pair of GoSub and Return	Revise the program.
85500035		Error in initialization process	5	An error occurred in the controller power-on process.	If you can identify an error from the error log that has been issued before the controller power-on process error, remove the cause of the error and try again. If you cannot identify another error, contact to DENSO WAVE service.
81500036		Same file name exists.	1	You cannot operate it because a file or directory with the same name already exists.	Revise the file name or directory name.
83500037		Undefined error	3	Undefined error occurred.	Contact to DENSO WAVE service.
81500038		You cannot set any axis included in the robot axes.	1	You cannot set an axis included in the robot axes. This setting is available to extended-joint only.	Specify extended-joint

Code	RC7 Code	Message	Level	Description	Remedy
80500039		Failed to store the area position	0	Failed to store the area detection position to P type variable.	Revise the area setting and then change P type variable number, or increase P type variable number.
8050003A		This command is not available while program is running	0	You tried to execute a process that is not available while program is running.	Do not execute the process while program is running.
8150003B	3C37	Illegal file name	1	File or folder has illegal name that can't be handled by a program.	Revise the file name or folder name.
8350003C		A transfer file is not found.	3	A file you specified is not exist in the controller.	Revise the file receive process of the program.
8350003D		You cannot execute it because a dependent files have been changed.	3	You cannot execute it because a dependent file has been changed.	Check the syntax of the dependant program.
8350003E		The specified port cannot be used for Detect function.	3	The selected port cannot be used in Detect function.	Specify Mini I/O user input port or Hand I/O input port for Detect function. If the port is assigned to the dummy input, release the dummy input.
8350003F		Port has been DetectOn by other Program.	3	DetectON command in different program have already specified with the same port number and the same detection direction.	Revise the port number and the detection direction of the DetectOn command.
83500040		Specified variable exceeds the range of the global variables	3	Specified global variable number is out of range.	Increase global variable size, or revise the variable specification.
81500041		The length of the string exceeds 255 bytes.	1	You tried to enter more than 255 bytes. Data stored in the character string for global variable cannot exceed 255 bytes.	Revise the program to reduce the string size to 255 bytes or less.
83500042		Program have already obtained arm group.	3	The program already taken the arm group that is different from the specified one.	Release arm semaphore with Givearm command, and then take another arm group number.
80500043		Auto-Tuning has been interrupted.	0	Auto-tuning has been stopped because a stop process was executed.	Execute Auto-tuning again.
80500044		Invalid line number to start	0	Program cannot start from the specified line.	Specify another line number.
80500045		Reset the program.	0	Program has been reset because JUMP was executed to jump to a point outside of the current function while program was running.	The program will be executed from the first line when the program starts next time.
80500046		Syntax check was canceled	0	Syntax check was canceled.	Perform syntax check again.
80500047		The number of Motor-ON exceeded the threshold.	0	Motor has been turned on more than the predetermined times.	Please prepare to change motor.
80500048		Program attribute file error.	0	An error has been occurred on a file that manages program attributes.	Reboot the controller. Set the flags for Priority and Activate/Inactivate again because these attributes have been initialized.

Code	RC7 Code	Message	Level	Description	Remedy
85500049		No valid VRC instance	5	Invalid invocation of AddController.	Revise the connection parameter of AddController method.
8350004A		Check-sum error	3	A Check-sum error has been detected when reading data.	Reboot the controller. If error still occurs, please contact to DENSO WAVE service.
8350004B	77E5	This axis is not activated.	3	This operation is not available to the inactivated axis.	Do not operate the inactivated axis. Activate the axis and then operate again.
8350004C		Axes are set overlapped	3	Link Info tried to set already used axis.	For Link Info setting, use axis that does not overlap with another link number.
8050004D		Breakpoints on the edited program were cleared.	0	Breakpoints were cleared because the program was edited.	Reset breakpoints if necessary.
8550004E		Although all-stop processing has been performed, some programs do not stop in a certain period of time.	5	Although all-stop processing was performed, some program did not stop within a specified period of time.	Reboot the controller.
8050004F		Duplicated COM Number	0	COM number is duplicated with other settings.	Select non-duplicated COM number.
83500050		Failed to transfer files.	3	Failed to read data from the recording medium.	Reboot the controller and try again.
83500051		Failed to transfer files.	3	Failed to read the transferrd data.	Reboot the controller and try again.
81500052	2261	Failed to write in the media	1	Failed to write into the recording medium.	Reboot the controller and try again.
81500053		Variable index is out of range	1	You tried to access a variable with an Index that exceeds the available range of variable.	Specify an Index within the variable range.
85500054		Encoder version is different.	5	Encoder version is not set properly.	Please contact to DENSO WAVE service.
80500055		Panel task was stopped.	0	Panel task has stopped because an error occurred in the task.	Close the Panel and open it again to restart the Panel task.
83500056		You cannot execute the command while the control log is being saved.	3	This operation is prohibited while the control log is being saved.	Try the operation again after the control log is saved.
83500057		You cannot execute the command while the servo log is being saved.	3	This operation is prohibited while the servo log is being saved.	Try the operation again after the servo log is saved.
85500058		Controller type is not match with the robot type.	5	Different type of robot was connected.	Please contact to DENSO WAVE service.
83500059		Panel Task cannot start.	3	An error occurred while starting Panel task.	Revise Panel task file.
8050005A		Panel Task is in the Stop-state.	0	Panel task stops.	Restart necessary Panel task.
8050005B		Failed to start the Panel Task.	0	An error occurred while starting Panel task.	Revise Panel task file.
8050005C		Direct Mode was cancelled	0	Direct mode was canceled.	Execute the direct mode again if you need to go on the direct mode

Code	RC7 Code	Message	Level	Description	Remedy
83501061		Command is not executable while vision data is being saved.	3	This command is not executable while visition datas is being saved.	Save the vision data completely, and then retry.
83501062		This command is not available in CC8.	3	This command is not available in CC8.	Revise the program.
83501063		You cannot execute a command until Safety parameters are transferred completely.	3	Failed to execute the command because Safety parameters transfer has not been completed.	Complete Safety parameters tranfer.
81501064		You cannot execute a command during Safety parameters transfer.[PC->RC]	1	This operation is not available during Safety parameters transfer [PC->RC].	Complete Safety parameters transfer and try again.
81501065		You cannot execute a command during Safety parameters transfer.[RC->PC]	1	This operation is not available during Safety parameters transfer [RC->PC].	Complete Safety parameters transfer and try again.
81501066		You cannot execute a command when the SS1 ON	1	This operation is not available while the SS1 is ON.	SS1 OFF and try again.
81501067		You cannot execute a command during Load estimating.	1	This operation is not available during Load estimating.	Finish Load estimating and try again.
81501068		You cannot execute a command during direct mode.	1	This operation is not available during Direct Mode.	Finish Direct mode and try again.
81501069		Operation preparation is necessary.	1	Operation preparation is necessary.	Prepare for operation.
8150106A		It can be executed only in direct mode.	1	Please execute in direct mode.	Please execute in direct mode.
8150106B		Execution is possible only if login level is programmer or higher.	1	Execution is possible only if login level is programmer or higher.	Please login with programmer or higher.
8350106C		You cannot execute a command while the homing mode is in process.	3	This operation is not available while the homing mode of selective external joint is in process.	Try again after the end of homing mode.
8350106D		It can not be executed in the direct preparation mode.	3	It can not be executed when the Teach-pendant setting is direct preparation mode.	Please cancel direct preparation mode with the Teach-pendant.
8350106E		You cannot motor power is ON while the motor power is OFF.	3	You cannot motor power is ON while the motor power is OFF.	Turn OFF the motor and try again.
8350106F		All programs were Reset-stop because some tasks in the program were not Reset-stop.	3	All programs were Reset-stop because some tasks in the program were not Reset-stop.	Please execute while all programs are Reset-stop.

Code	RC7 Code	Message	Level	Description	Remedy
81501070		You cannot execute a command while motion preparation has not been performed.	1	You cannot execute a command while motion preparation has not been performed.	Prepare for operation.
83501071		It can not be executed while the electric vacuum generator is running.	3	It can not be executed while the electric vacuum generator is running.	Please execute with the electric vacuum generator stopped.
83501072		You cannot execute a command when the COBOTTA Master Control function is enabled.	3	This operation is not available when the COBOTTA Master Control function is enabled.	Disable the COBOTTA Master Control function mode and then try again.
83501073		You cannot execute a command during SLS checking.	3	This operation is not available during SLS checking.	Finish SLS checking and then try again.
83502001	73E4	Out of I/O port range	3	You tried to handle I/O port range does not exist on the controller.	Revise the I/O number and then try again.
83502002	73E4	Port is in the System I/O range	3	You tried to handle System I/O port range.	Revise the I/O number and then try again.
83502003	73E4	Port is out of the System I/O range	3	You tried to handle User I/O as System I/O.	Revise the I/O number and then try again.
83502004	73E4	Out of User I/O port range	3	This I/O does not support input/output operation.	Revise the I/O operation and then try again.
83502005		Out of Dummy input range	3	You tried to turn ON/OFF I/O that isn't set as Dummy I/O input port.	Revise Dummy I/O input setup and then try again
83502006	2032	Undefined I/O command	3	Undefined I/O command was executed in System I/O.	An error occurred in the System I/O input command format. Revise the format and then try again.
83502007	73E4	Undefined I/O allocation	3	Undefined I/O allocation is specified.	Revise I/O allocation.
83502008	2033	I/O parity error	3	Inconsistent parity is found in System I/O.	Set the parity properly and turn ON the strobe signal of the system input.
83502009	73E4	Out of I/O input range	3	Failed to input data because this port is not input-area.	Revise the I/O number and try again.
8350200A		Invalid float value on I/O input	3	Bit-array was not recognized as Float when Float definition of DefIO has been set.	Revise the I/O bits so that it can be recognized as Float, and then retry.
8350200B	123C	Preparing for the field network communication	3	Field network communication has not been established yet.	Revise field network setting.
8350200C	123D	Field network connection has been closed	3	The communication was closed after the field network connection was established.	Confirm field network master parameters and cable connection status.
8350200D	125C	Field network internal EEPROM failure	3	An error occurred at EEPROM of the field network.	Reboot the power supply.
8350200E	125D	Field network address IP is duplicated.	3	IP address specified for the field network board is conflicting with another network device.	Change IP address of network device or field network to avoid IP address duplication.

Code	RC7 Code	Message	Level	Description	Remedy
8350200F	125E	Field network board initialization error	3	Failed to initialize the field network board.	Reboot the power supply of the field network.
83502010	125F	Field network configuration error	3	Failed to initialize the field network board.	Reboot the power supply of the field network.
83502011	1268	Field network communication error	3	An error occurred while establishing the field network connection.	Confirm field network master parameters and cable connection status.
83502012	1269	Field network receiving timeout	3	Timeout error occurred while acquiring the field network input data.	Confirm field network master parameters and cable connection status.
83502013	1298	Field network sending timeout	3	Timeout error occurred while acquiring the field network output data.	Confirm field network master parameters and cable connection status.
83502014	1299	Field network license error	3	Tried to use non-master type field bus board as a master.	Confirm field network board supports master operation.
83502015	123F	Field network Runtime error	3	An error occurred in the runtime routine for the field network.	Confirm LED on the board is lit, and then reboot the power supply.
83502016	123E	Field network error	3	An error occurred at the field network.	Reboot the power supply of the field network.
83502017	1235	Field network Command Timeout Error	3	Controller internal filed network communication error and timeout occurred.	Increase corresponding field network timeout setting.
83502018	123B	Field network error	3	Undefiled field network error	Reboot the power supply of the field network.
83502019		CC-Link error	3	CC-Link slave communication error occurred.	Check the CC-Link slave communication parameter
8350201A		DeviceNet master error	3	DeviceNet master communication error occurred.	Check the DeviceNet master communication parameter
8350201B		DeviceNet slave error	3	DeviceNet slave communication error occurred.	Check the DeviceNet slave communication parameter
8350201C		EtherNet/IP adaptor error	3	Ethernet I/P adaptor communication error occurred.	Check the Ethernet/IP adaptor communication parameter
8350201D		PROFIBUS slave error	3	Profibus slave communication error occurred.	Check the Profibus slave communication parameter.
8350201E		Invalid Robot ID on I/O input	3	The robot ID specified by I/O does not exist.	Check if the robot ID is correct.
8150201F		You cannot switch the I/O lock states between "Disable" to "Disable".	1	Tried to change the I/O lock status from "disable" to "disable".	Set to the Enable-state first, and then change to the Disable-state.
83502020	73E4	Invalid Data Area value	3	This command does not allow to turn ON the 15th bit of the data area.	Revise data area value and then retry.
82502021	21F5	Specified program is already running	2	The program that you specified to start in the System input is already running.	Revise the system input command and then retry.
83502022	2003	I/O value is out of range	3	The value specified in data area is not supported by system input command.	Revise the system input data area and then retry.
83502023	73E4	This is not the output area.	3	Specified area is not for the output.	Revise output I/O number and then retry.

Code	RC7 Code	Message	Level	Description	Remedy
81502024		You cannot use this function in the current I/O allocation	1	Failed to execute a command because this command is not supported by current I/O allocation.	Revise system input command and then retry.
83502025		Invalid device	3	Unsupported field network device is attached.	Revise the installed field network board.
83502027		Invalid allocation	3	Allocation setting is wrong.	Revise the allocation and reboot the field network power supply.
85502028		I/O board specification error	5	NPN type I/O is specified for the controller, but PNP type I/O board is installed.	Change the setting to PNP type, or change the board to NPN type.
85502029		I/O board specification error	5	PNP type I/O is specified for the controller, but NPN type I/O board is installed.	Change the setting to NPN type, or change the board to PNP type.
8350202A		Invalid I/O command argument	3	Invalid argument is passed to I/O command.	Revise the argument for I/O command.
8550202B		Invalid I/O allocation	5	Non-existing I/O allocation is specified.	Revise the I/O allocation, and then select I/O allocation that corresponds with the controller.
8150202C		Specified field network device does not exist.	1	1. Robot controller could not recognize the field network device connected. 2. The field network device specified by the project data sent from WINCAPS3 has not been connected. The target device is running in Simulation mode.	1. Reconnect the network device that had been connected to the robot controller. When connecting, be sure to set the field network device vertically to the connector on the robot controller. For details, refer to "Installing Expansion Board" (ID: 1347) in "RC8 SERIES ROBOT CONTROLLER MANUAL". 2. Connect the corresponding field network device.
8350202D		The system input range does not exist.	3	The system input range does not exist.	Reboot the power supply of the field network.
8150202E		Stop-processing output I/O can only be assigned to the user output.	1	Stop-processing output I/O is set to other than the user output.	Change the setting to user output.
8350202F		DeviceNet Slave:No license	3	No lisence.	Please register license number for the function to the controller. If you do not have a license, please contact DENSO WAVE to ask for the new licence.
83502030		DeviceNet Master:No license	3	No lisence.	Please register license number for the function to the controller. If you do not have a license, please contact DENSO WAVE to ask for the new licence.

Code	RC7 Code	Message	Level	Description	Remedy
83502031		CC-Link Slave:No license	3	No lisence.	Please register license number for the function to the controller. If you do not have a license, please contact DENSO WAVE to ask for the new licence.
83502032		Profibus Slave:No license	3	No lisence.	Please register license number for the function to the controller. If you do not have a license, please contact DENSO WAVE to ask for the new licence.
83502033		EtherNet/IP adaptor:No license	3	No lisence.	Please register license number for the function to the controller. If you do not have a license, please contact DENSO WAVE to ask for the new licence.
83502034		Parallel I/O:No license	3	No lisence.	Please register license number for the function to the controller. If you do not have a license, please contact DENSO WAVE to ask for the new licence.
83502035		Specified field network device has not been configured. Reboot after the configuration.	3	The installed field network device has not been configured. Reconfigure the board with the Sycon.Net, and then reboot.	The installed network device has not been set. Install Syncon.Net software on a PC, configure the network device through the network with the software, and then reboot.
81502036		Robot-running (command value) I/O can only be assigned to the User output and the Internal I/O.	1	Robot running (command value) output is set to other than the User output.	Change the setting to the user output.
83502037		Command-Slave is not available with the currently used field network device.	3	Command-Slave is not available with the current field network device.	Connect the Command-Slave-supported field network device.
83502038		Command-Slave data area setting error.	3	Insufficient data area for Command-Slave. The minimum I/O area sizes are Input:188 bytes, and Output:120 bytes.	Change the network I/O size to an appropriate value.
81502039		TSR-running I/O can only be assigned to the User output and the Internal I/O.	1	TSR running output is set to other than the User output.	Change the setting to the User output.
8150203A		Robot-running (encoder value) I/O can only be assigned to the User output and the Internal I/O.	1	Robot running (Encoder) output is set to other than the User output.	Change the setting to the User output.

Code	RC7 Code	Message	Level	Description	Remedy
8150203B		Robot controller startup completed-I/O can only be assigned to the User output and the Internal I/O.	1	Robot controller startup completed output is set to other than the User output.	Change the setting to the User output.
8150203C		Tip speed output AO device (manufactured by CONTEC) is not found.	1	The tip speed output AO device is not found.	Connect the AO device manufactured by CONTEC.
8150203D		AO channel that outputs the tip speed is not found.	1	AO channel that outputts the tip speed is not found.	Please set the channel number within the range of the currently installed AO device manufactured by CONTEC.
8150203E		Failed to set the AO range that outputs the tip speed.	1	Failed to set the AO range that outputs the tip speed.	Please set the output range of the currently installed AO device manufactured by CONTEC.
8150203F		Failed to initialize the tip speed output AO.	1	Failed to initialize the tip speed output AO.	Reboot the controller. If error still occurs, please contact to DENSO WAVE service.
81502040		Failed to get the tip speed.	1	Failed to get the tip speed.	Reboot the controller. If error still occurs, please contact to DENSO WAVE service.
81502041		Failed to output the analog voltage of the tip speed.	1	Failed to output the analog voltage of the tip speed.	Reboot the controller. If error still occurs, please contact to DENSO WAVE service.
83502042		PROFINET I/O Device:No license	3	No lisence.	Please register license number for the function to the controller. Or contact DENSO WAVE to ask for the new licence.
83502043		EtherCAT Slave:No license	3	No lisence.	Please register license number for the function to the controller. Or contact DENSO WAVE to ask for the new licence.
83502044		The project is configured as a field network master, but the slave device is connected.	3	The project is configured as a field network master, but the slave device is connected.	The attached device can be used for fielld network slave only. Please exchange it with the field network master device.
81502045		32-bit error number output I/O can only be assigned to the User output and the Internal I/O.	1	32-bit error number output I/O can only be assigned to the user output and the internal I/O.	Change the setting to the User output.
81502046		Battery replacement time output I/O can only be assigned to the User output and the Internal I/O.	1	Change battery time output I/O can only be assigned to the User output and the Internal I/O.	Change the setting to the User output.
81502047		Motor-OFF processing output I/O can only be assigned to the User output and the Internal I/O.	1	Motor-OFF processing output I/O can only be assigned to the User output and the Internal I/O.	Change the setting to the User output.

Code	RC7 Code	Message	Level	Description	Remedy
81502048		Anomaly detection joint output start port can only be assigned to the User output and the Internal I/O.	1	Anomaly detection joint output start port can only be assigned to the User output and the Internal I/O.	Change the setting to the User output.
81502049		Sharp rise pattern output port number can only be assigned to the User output and the Internal I/O.	1	Sharp rise pattern output port number can only be assigned to the User output and the Internal I/O.	Change the setting to the User output.
8150204A		Gradual pattern output port number can only be assigned to the User output and the Internal I/O.	1	Gradual pattern output port number can only be assigned to the User output and the Internal I/O.	Change the setting to the User output.
8350204B		EtherCAT slave error	3	EtherCAT slave communication error occurred.	Confirm EtherCAT slave communication parameter.
8350204C		It is impossible to operate several I/O ports in different I/O devices.	3	You tried to operate several I/O devices at the same time.	You tried to operate several I/O devices at the same time.
8150204D		This operation is not available because another process is using the same CONTEC Co. AO device.	1	This operation is not available because another process is using the same CONTEC Co. AO device.	Please use a device that does not collides with other process.
8150204E		Current mode output port number can only be assigned to the User output and the Internal I/O.	1	Current mode output port number can only be assigned to the User output and the Internal I/O.	Change the setting to the User output.
8350204F		The start number of sending I/O must be the multiples of 8.	3	The start number of sending IO must be the multiples of 8.	Use multiples of 8 for the start number of sending I/O.
83502050		Data length of sending I/O must be the multiples of 8.	3	Data length of sending IO must be the multiples of 8.	Set the data length of sending I/O to the multiples of 8.
83502051		The start number of receiving I/O must be the multiples of 8.	3	The start number of receiving IO must be the multiples of 8.	Use multiples of 8 for the start number of receiving I/O.
83502052		Data length of receiving IO must be the multiples of 8.	3	Data length of receiving IO must be the multiples of 8.	Set the data length of receiving I/O to the multiples of 8.
83502053		POWERLINK Controlled Node:No license	3	No lisence.	Please register license number for the function to the controller. Or contact DENSO WAVE to ask for the new licence.
83502054		sercos Slave:No license	3	No lisence.	Please register license number for the function to the controller. Or contact DENSO WAVE to ask for the new licence.

Code	RC7 Code	Message	Level	Description	Remedy
83502055		Command-Slave data area setting error.	3	Insufficient data area for Command-Slave. The minimum I/O area sizes are Input:248 bytes, and Output:208bytes.	Change the network I/O size to an appropriate value.
81502056		Robot Calc BackTraceLog output I/O can only be assigned to the User output and the Internal I/O.	1	Robot Calc BackTraceLog output I/O can only be assigned to the User output and the Internal I/O.	Change the setting to the User output.
81502057		Robot Move BackTraceLog output I/O can only be assigned to the User output and the Internal I/O.	1	Robot Move BackTraceLog output I/O can only be assigned to the User output and the Internal I/O.	Change the setting to the User output.
81502500		＊ Slave connection is disconnected	1	Slave connection is disconnected	Check the slave device condition.
85503001		Command-Slave fatal error	5	Unexpected Command-Slave error has occurred	Restart the controller. If the error still occurs, please contact to DENSO WAVE service.
83503002		Command-Slave strobe control is abnormal	3	Strobe has been turned OFF while Command-Slave was running	Turn OFF the strobe after completion
83503003		Invalid value for the interpolation method setting	3	Specified interpolation method is invalid.	Select the value from 1 or 0.
83503004		Invalid value for the pass start displacement setting	3	Specified pass start displacement is invalid.	Value range is from -6 to 65535. Revise the value.
83503005		Invalid value for the coordinate type of the target position	3	Specified coordinate type is invalid.	Value range is from 257 to 259. Revise the value.
83503006		Invalid valur for the variable number of the target position	3	Out-of-range value is set for the target position variable.	Value range needs to be a positive number. Revise the value.
83503007		Invalid value for the variable number of the route position (Move_C)	3	Out-of-range value is set for the route position variable of the circular motion.	Value range needs to be a positive number. Revise the value.
83503008		Invalid value for the route number (Move_S)	3	Out-of-range value is set for the route position of the spline motion.	Value range is from 1 through 20. Revise the value.
83503009		Invalid value for the Next option	3	Specified parameter of Next option is invalid.	Select the value for the interpolation method from 1 or 0.
8350300A		Invalid value for the Speed setting	3	Out-of-range value is set for internal speed of Motion option.	Value range is from 0.1 to 100. Revise the value.
8350300B		Invalid value for the Acceleration setting	3	Out-of-range value is set for internal acceleration speed of Motion option.	Value range is from 0.0001 to 100. Revise the value.

Code	RC7 Code	Message	Level	Description	Remedy
8350300C		Invalid value for the Deceleration setting	3	Out-of-range value is set for internal deceleration speed of Motion option.	Value range is from 0.0001 to 100. Revise the value.
8350300D		Invalid value for the Motion option (operation time)	3	Out-of-range value is set for motion time of Motion option.	Revise the setting so that the motion time is within the setting range. Specify the motion time by integer type. Entering a negative number causes an error.
8350300E		Invalid value for the Motion option (specify by MPS [internal speed])	3	Out-of-range value is set for internal speed (specified by MPS) of Motion option.	Revise the setting so that the internal speed parameter (specified by MPS) is within the setting range. Specify the Speed value (mm/sec) by single precision real number type data. Entering 0 is regarded as it is omitted. Entering a negative number causes an error.
8350300F		Invalid value for the Arm group	3	Specified Arm group is not defined.	Confirm Arm number index setting. Available arm group number is integer-type data between 0 and 31.
83503010		Invalid value for the Arm group KEEP	3	Out-of-range value is set for KEEP parameter.	Check the KEEP parameter index setting. Specify 0 or 1 by integer type.
83503011		Invalid value for the variable number	3	Out-of-range value is set for variable number.	Revise the setting so that the variable number is within the range of global variable.
83503012		Invalid Tool number for tool setting	3	Out-of-range value is set for Tool number.	Check the Tool number index setting. Available tool number is integer-type data between 1 and 63.
83503013		Invalid Tool number for tool changing	3	Out-of-range value is set for Tool number.	Check the Tool number index setting. Available Tool number is integer-type data between 0 and 63.
83503014		Invalid Work number for work setting	3	Out-of-range value is set for Work number.	Check the Work number index setting. Available Work number is integer-type data between 1 and 7.
83503015		Invalid Work number for work changing	3	Out-of-range value is set for Work number.	Check the Work number index setting. Available Work number is integer-type data between 0 and 7.
83503016		Invalid Area number	3	Out-of-range value is set for Area number	Check the Area number index setting. Available Area number is integer-type data between 0 and 31.
83503017		Invalid P-variable number for the center of detection area	3	Out-of-range value is set for Position-type variable for the center of the detection area.	Revise the setting so that the Position-type variable for the center of the detection area is within the range of global variable.
83503018		Invalid V-variable number for the detection area	3	Out-of-range value is set for Vector-type variable for the detection area.	Revise the setting so that the Vector-type variable for detection area is within the range of global variable.
83503019		Invalid Area detection period	3	Specified value for the Area detection period is out-of-range.	Select the area detection period from 0 to 4 by Integer-type data. Available detection periods are 2, 4, 8, 16 and 32ms.

Code	RC7 Code	Message	Level	Description	Remedy
8350301A		Invalid variable paramter for Area Pose	3	Specified value for the Area Pose paramter is out-of-range.	Select the Pose detection range from 0 to 2. Available Pose parameters are Vector-type or Position-type.
8350301B		Invalid variable number for Area Pose	3	Specified value for the Area Pose variable number is out-of-range.	Set a Area Pose variable within the range of global variable.
8350301C		Invalid variable number for four corners of a palette	3	A variable set for the palette 4-corner position is out-of-range.	Set a variable for the palette 4-corner position within the range of global variable.
8350301D		Incorrect output　setting during area detection	3	Out-of-range value was set to the area output setting	Check available area output setting. Available value ranges from 0 to 1.
8350301E		Incorrect error detection setting during area detection	3	Out-of-range value was set to the area detection setting	Check available area detection setting. Available value ranges from 0 to 5.
8350301F		Incorrect axis number for the area extended-joint option	3	Out-of-range value was set to the axis number for the area extended-joint option	Specify the extended-joint number by integer-type data. If a robot axis or axis that isn't exist is specified, an error occurs.
83503020		Incorrect JOG motion mode	3	Specified value for the JOG motion mode was out-of-range.	Revise Motion mode setting. Available value for the motion mode is integer-type data between "0" and "2".
83503021		Incorrect JOG motion axis	3	Specified value for the JOG motion axis was out-of-range.	Revise Motion axis setting. Available value for motion axis is integer-type data between "1"(1-axis/X-axis) and "8"(8-axis).
83503022		Incorrect JOG motion direction	3	Specified value for the JOG motion direction was out-of-range.	Revise Motion direction setting. Available motion direction value is integer-type data either "0"(positiove direction) or "1"(negative direction).
83503023		Incorrect speed value	3	Specified value for Speed was out-of-range.	Revise Speed setting. Available value for Speed ranges from 0.1 to 100.
83503024		Incorrect acceleration value	3	Specified value for Acceleration was out-of-range.	Revise Acceleration setting. Available value for Acceleration ranges from 0.0001 to 100.
83503025		Incorrect deceleration value	3	Specified value for Deceleration was out-of-range.	Revise Deceleration setting. Available value for Deceleration ranges from 0.0001 to 100.
83503026		Incorrect ARRIVE ratio	3	Specified value for ARRIVE motion ratio was out-of-range.	Revise ARRIVE motion ratio setting. Motion ratio must be no less than 0 and equal to 100 or less.
83503027		Incorrect Work attribute	3	Specified value for Work attribute of the Work setting was out-of-range.	Revise Work attribute setting. Available value for the motion direction is integer-type data between "0"(standard) and "1"(fixing tool).
83503028		Incorrect Z-axis thrust	3	Specified value for Z-axis thrust was out-of-range.	Revise Z-axis thrust value. (Unit: N)

Code	RC7 Code	Message	Level	Description	Remedy
83503029		Incorrect P-variable number for storing the error detection position	3	Out-of-range value was set to the P-variable number for storing the area detection position	Revise P-variable number for storing area detection position so that the value is within the range of global variable.
8350302A		Incorrect P-variable number for path point	3	Out-of-range value was set to the P-variable number for path point.	Revise P-variable number for path point so that the value is within the range of global variable.
8350302B		Incorrect V-variable number for the position of the payload center of gravity	3	Out-of-range value was set to the V-variable number for the position of the payload center of gravity.	Revise V-variable number for the position of the payload center of gravity so that the value is within the range of global variable.
8350302C		Incorrect V-variable number for the inertia through the payload center of gravity	3	Out-of-range value was set to the V-variable number for the inertia through the payload center of gravity.	Revise V-variable number for the inertia through the payload center of gravity so that the value is within the range of global variable.
8350302D		Incorrect P-variable number for the force control (force)	3	Out-of-range value was set to the P-variable number for the Force parameter of the force control function.	Revise P-variable number for the Force parameter of the force control function so that the value is within the range of global variable.
8350302E		Incorrect P-variable number for the force control (allowable position deviation)	3	Out-of-range value was set to the P-variable number for Allowable position deviation parameter of the force control function.	Revise P-variable number for Allowable position deviation parameter of the force control function so that the value is within the range of global variable.
8350302F		Incorrect P-variable number for the force control (compliance)	3	Out-of-range value was set to the P-variable number for the Compliance parameter of the force control function.	Revise P-variable number for the Compliance parameter of the force control function so that the value is within the range of global variable.
83503030		Incorrect P-variable number for the force control (damping)	3	Out-of-range value was set to the P-variable number for the Damping parameter of the force control function.	Revise P-variable number for the Damping parameter of the force control function so that the value is within the range of global variable.
83503031		Incorrect P-variable number for the force control (inertia)	3	Out-of-range value was set to the P-variable number for the Inertia parameter of the force control function.	Revise P-variable number for the Inertia parameter of the force control function so that the value is within the range of global variable.
83503032		Incorrect J-variable number for the force control (current limit)	3	Out-of-range value was set to the J-variable number for the Current limit parameter of the force control function.	Revise J-variable number for the Current limit parameter of the force control function so that the value is within the range of global variable.
83503033		Incorrect P-variable number for the force control (offset value)	3	Out-of-range value was set to the P-variable number for the Offset value parameter of the force control function.	Revise P-variable number for the Offset value parameter of the force control function so that the value is within the range of global variable.
83503034		Incorrect J-variable number for the force control (allowable axis deviation)	3	Out-of-range value was set to the J-variable number for the Allowable axis deviation parameter of the force control function.	Revise J-variable number for the Allowable axis deviation parameter of the force control function so that the value is within the range of global variable.

Code	RC7 Code	Message	Level	Description	Remedy
83503035		Incorrect P-variable number for the force control (control rate)	3	Out-of-range value was set to the P-variable number for the Control rate parameter of the force control function.	Revise P-variable number for the Control rate parameter of the force control function so that the value is within the range of global variable.
83503036		Incorrect axis number.	3	Out-of-range value was set to the axis number	Specify the joint number by integer-type data. If a xis that isn't exist is specified, an error occurs.
83503037		Command isn't executable while Stop-ON.	3	Failed to execute because this operation is not available during Stop-ON.	Turn the Stop-OFF and then retry.
83503038		Command isn't executable while Interrupted.	3	Failed to execute because this operation is not available during Interrupted.	While interrupted, only continue and stop commands can be executed.
83503039		Invalid offset number.	3	Invalid offset number　for the error information	Value range needs to be a offset number.
8350303A		Incorrect P-variable number for the force wait condition (travel distance)	3	Out-of-range value was set to the P-variable number for the travel distance parameter of the force control wait condition function.	Revise P-variable number for the travel distance parameter of the force control wait condition function so that the value is within the range of global variable.
8350303B		Incorrect P-variable number for the force wait condition (force and moment)	3	Out-of-range value was set to the P-variable number for the force and moment parameter of the force control wait condition function.	Revise P-variable number for the force and moment parameter of the force control wait condition function so that the value is within the range of global variable.
8350303C		Incorrect program type.	3	Incorrect program type.	Please review set point.
8350303D		Incorrect program number.	3	Incorrect program number.	Please review set point.
8350303E		Incorrect DIO kind.	3	Incorrect DIO kind.	Please review set point.
8350303F		Incorrect DIO Bit input-output number.	3	Incorrect DIO Bit input-output number.	Please review set point.
83503040		Incorrect DIO-Bit output value.	3	Incorrect DIO-Bit output value.	Please review set point.
83503041		Incorrect DIO Byte input-output number.	3	Incorrect DIO Byte input-output number.	Please review set point.
83503042		Incorrect DIO-Byte output value.	3	Incorrect DIO-Byte output value.	Please review set point.
83503043		Incorrect robot parameter number.	3	Incorrect robot parameter number.	Please review set point.
83503044		Incorrect buffer moder.	3	Incorrect buffer moder.	Please review set point.
83503045		Incorrect transition moder.	3	Incorrect transition moder.	Please review set point.
83503046		Incorrect transition parameter.	3	Incorrect transition parameter.	Please review set point.
83503047		Periodic access from the PLC to the controller has been interrupted.	3	Periodic access from the PLC to the controller has been interrupted.	Check the setting of PLC.
83503048		The communication parameter is incorrect.	3	The communication parameter is incorrect.	Check the communication parameter.

Code	RC7 Code	Message	Level	Description	Remedy
83503049		The communication permission parameter is incorrect.	3	The communication permission parameter is incorrect.	Check the communication permission parameter.
8350304A		The excutable token parameter is incorrect.	3	The excutable token parameter is incorrect.	Check the excutable token parameter.
8350304B		The date parameter is incorrect.	3	The date parameter is incorrect.	Check the date parameter.
8350304C		The calset parameter is incorrect.	3	The calset parameter is incorrect.	Check the calset parameter.
8350304D		The encoder reset parameter is incorrect.	3	The encoder reset parameter is incorrect.	Check the encoder reset parameter.
8350304E		FB multiple run	3	Multiple FB run at the same time.	Do not run multiple.
83505001	27D3	Failed to take J1 semaphore	3	1. A task that does not have arm semaphore tried to execute robot motion command. 2. A task tried to take arm semaphore, but the semaphore has been taken by another task already.	1. Retrieve arm semaphore with TakeArm statement, and then execute robot motion command. 2. Revise the program so that multiple programs do not take the arm semaphore concurrently.
83505002	27D3	Failed to take J2 semaphore	3	1. A task that does not have arm semaphore tried to execute robot motion command. 2. A task tried to take arm semaphore, but the semaphore has been taken by another task already.	1. Retrieve arm semaphore with TakeArm statement, and then execute robot motion command. 2. Revise the program so that multiple programs do not take the arm semaphore concurrently.
83505003	27D3	Failed to take J3 semaphore	3	1. A task that does not have arm semaphore tried to execute robot motion command. 2. A task tried to take arm semaphore, but the semaphore has been taken by another task already.	1. Retrieve arm semaphore with TakeArm statement, and then execute robot motion command. 2. Revise the program so that multiple programs do not take the arm semaphore concurrently.
83505004	27D3	Failed to take J4 semaphore	3	1. A task that does not have arm semaphore tried to execute robot motion command. 2. A task tried to take arm semaphore, but the semaphore has been taken by another task already.	1. Retrieve arm semaphore with TakeArm statement, and then execute robot motion command. 2. Revise the program so that multiple programs do not take the arm semaphore concurrently.
83505005	27D3	Failed to take J5 semaphore	3	1. A task that does not have arm semaphore tried to execute robot motion command. 2. A task tried to take arm semaphore, but the semaphore has been taken by another task already.	1. Retrieve arm semaphore with TakeArm statement, and then execute robot motion command. 2. Revise the program so that multiple programs do not take the arm semaphore concurrently.
83505006	27D3	Failed to take J6 semaphore	3	1. A task that does not have arm semaphore tried to execute robot motion command. 2. A task tried to take arm semaphore, but the semaphore has been taken by another task already.	1. Retrieve arm semaphore with TakeArm statement, and then execute robot motion command. 2. Revise the program so that multiple programs do not take the arm semaphore concurrently.

834A1376		SS1 signal input circuit 1 diagnosis signal failure	3	Diagnosis signal failure is detected at safety-motion I/O SS1 signal input circuit 1.	Check if there are no short circuit, ground fault, or improper connection for two lines on SS1 signal connection. Once you check that all SS1 wirings are properly connected, remove the safety-motion input connector and then reboot the robot controller. If the error doesn't occur, revise the connection. If the error still occurs, please contact DENSO WAVE service with error number and error message.
834A1377		SS1 signal input circuit 2 diagnosis signal failure	3	Diagnosis signal failure is detected at safety-motion I/O SS1 signal input circuit 2.	Check if there are no short circuit, ground fault, or improper connection for two lines on SS1 signal connection. Once you check that all SS1 wirings are properly connected, remove the safety-motion input connector and then reboot the robot controller. If the error doesn't occur, revise the connection. If the error still occurs, please contact DENSO WAVE service with error number and error message.
834A1378		Safe reference position check signal input circuit 1 diagnosis signal is undetected	3	Diagnosis signal is undetected at safety-motion I/O safe reference position check signal input circuit 1.	Check if there are no short circuit, ground fault, or improper connection for two lines on safe reference position check signal connection. Once you check that all safe reference position check wirings are properly connected, remove the safety-motion input connector and then reboot the robot controller. If the error doesn't occur, revise the connection. If the error still occurs, please contact DENSO WAVE service with error number and error message.

854A1744		Tool number input 0 setting cross monitoring error	5	Safety monitoring device tool number input 0 setting mismatch is detected.	Please confirm the safety parameters, and retransmit them. If error still occurs, please contact DENSO WAVE service with error number and error message.
854A1745		Tool number input 1 setting cross monitoring error	5	Safety monitoring device tool number input 1 setting mismatch is detected.	Please confirm the safety parameters, and retransmit them. If error still occurs, please contact DENSO WAVE service with error number and error message.
854A1746		Tool number input 2 setting cross monitoring error	5	Safety monitoring device tool number input 2 setting mismatch is detected.	Please confirm the safety parameters, and retransmit them. If error still occurs, please contact DENSO WAVE service with error number and error message.
854A1747		Tool number input 3 setting cross monitoring error	5	Safety monitoring device tool number input 3 setting mismatch is detected.	Please confirm the safety parameters, and retransmit them. If error still occurs, please contact DENSO WAVE service with error number and error message.
854A1748		Monitoring area 0 disable input setting cross monitoring error	5	Safety monitoring device monitoring area 0 disable input setting mismatch is detected.	Please confirm the safety parameters, and retransmit them. If error still occurs, please contact DENSO WAVE service with error number and error message.

Code	RC7 Code	Message	Level	Description	Remedy
854A1749		Monitoring area 1 disable input setting cross monitoring error	5	Safety monitoring device monitoring area 1 disable input setting mismatch is detected.	Please confirm the safety parameters, and retransmit them. If error still occurs, please contact DENSO WAVE service with error number and error message.
854A174A		Monitoring area 2 disable input setting cross monitoring error	5	Safety monitoring device monitoring area 2 disable input setting mismatch is detected.	Please confirm the safety parameters, and retransmit them. If error still occurs, please contact DENSO WAVE service with error number and error message.
854A174B		Monitoring area 3 disable input setting cross monitoring error	5	Safety monitoring device monitoring area 3 disable input setting mismatch is detected.	Please confirm the safety parameters, and retransmit them. If error still occurs, please contact DENSO WAVE service with error number and error message.
854A174C		Monitoring disable input setting cross monitoring error	5	Safety monitoring device monitoring disable input setting mismatch is detected.	Please confirm the safety parameters, and retransmit them. If error still occurs, please contact DENSO WAVE service with error number and error message.
854A174D		SS1 input setting cross monitoring error	5	Safety monitoring device SS1 input setting mismatch is detected.	Please confirm the safety parameters, and retransmit them. If error still occurs, please contact DENSO WAVE service with error number and error message.
854A174E		Safe reference position check input setting cross monitoring error	5	Safety monitoring device safe reference position check input setting mismatch is detected.	Please confirm the safety parameters, and retransmit them. If error still occurs, please contact DENSO WAVE service with error number and error message.
854A1750		Area-sensor SS2 input setting cross monitoring error	5	Safety monitoring device area-sensor SS2 input setting mismatch is detected.	Please confirm the safety parameters, and retransmit them. If error still occurs, please contact DENSO WAVE service with error number and error message.
854A1751		Area-sensor RSM1 input setting cross monitoring error	5	Safety monitoring device area-sensor RSM1 input setting mismatch is detected.	Please confirm the safety parameters, and retransmit them. If error still occurs, please contact DENSO WAVE service with error number and error message.
854A1752		Area-sensor RSM2 input setting cross monitoring error	5	Safety monitoring device area-sensor RSM2 input setting mismatch is detected.	Please confirm the safety parameters, and retransmit them. If error still occurs, please contact DENSO WAVE service with error number and error message.

Code	RC7 Code	Message	Level	Description	Remedy
854A1753		Area-sensor RSM3 input setting cross monitoring error	5	Safety monitoring device area-sensor RSM3 input setting mismatch is detected.	Please confirm the safety parameters, and retransmit them. If error still occurs, please contact DENSO WAVE service with error number and error message.
854A1754		Area-sensor tool number input 0 setting cross monitoring error	5	Safety monitoring device area-sensor tool number input 0 setting mismatch is detected.	Please confirm the safety parameters, and retransmit them. If error still occurs, please contact DENSO WAVE service with error number and error message.
854A1755		Area-sensor tool number input 1 setting cross monitoring error	5	Safety monitoring device area-sensor tool number input 1 setting mismatch is detected.	Please confirm the safety parameters, and retransmit them. If error still occurs, please contact DENSO WAVE service with error number and error message.
854A1756		Area-sensor tool number input 2 setting cross monitoring error	5	Safety monitoring device area-sensor tool number input 2 setting mismatch is detected.	Please confirm the safety parameters, and retransmit them. If error still occurs, please contact DENSO WAVE service with error number and error message.
854A1757		Area-sensor tool number input 3 setting cross monitoring error	5	Safety monitoring device area-sensor tool number input 3 setting mismatch is detected.	Please confirm the safety parameters, and retransmit them. If error still occurs, please contact DENSO WAVE service with error number and error message.
854A1758		Area-sensor monitoring area 0 disable input setting cross monitoring error	5	Safety monitoring device area-sensor monitoring area 0 disable input setting mismatch is detected.	Please confirm the safety parameters, and retransmit them. If error still occurs, please contact DENSO WAVE service with error number and error message.
854A1759		Area-sensor monitoring area 1 disable input setting cross monitoring error	5	Safety monitoring device area-sensor monitoring area 1 disable input setting mismatch is detected.	Please confirm the safety parameters, and retransmit them. If error still occurs, please contact DENSO WAVE service with error number and error message.
854A175A		Area-sensor monitoring area 2 disable input setting cross monitoring error	5	Safety monitoring device area-sensor monitoring area 2 disable input setting mismatch is detected.	Please confirm the safety parameters, and retransmit them. If error still occurs, please contact DENSO WAVE service with error number and error message.
854A175B		Area-sensor monitoring area 3 disable input setting cross monitoring error	5	Safety monitoring device area-sensor monitoring area 3 disable input setting mismatch is detected.	Please confirm the safety parameters, and retransmit them. If error still occurs, please contact DENSO WAVE service with error number and error message.

Code	RC7 Code	Message	Level	Description	Remedy
854A175C		Area-sensor monitoring disable input setting cross monitoring error	5	Safety monitoring device area-sensor monitoring disable input setting mismatch is detected.	Please confirm the safety parameters, and retransmit them. If error still occurs, please contact DENSO WAVE service with error number and error message.
854A175D		Area-sensor SS1 input setting cross monitoring error	5	Safety monitoring device area-sensor SS1 input setting mismatch is detected.	Please confirm the safety parameters, and retransmit them. If error still occurs, please contact DENSO WAVE service with error number and error message.
854A175E		Area-sensor safe reference position check input setting cross monitoring error	5	Safety monitoring device area-sensor safe reference position check input setting mismatch is detected.	Please confirm the safety parameters, and retransmit them. If error still occurs, please contact DENSO WAVE service with error number and error message.
854A1760		Auto-mode output setting cross monitoring error	5	Safety monitoring device auto-mode output setting mismatch is detected.	Please confirm the safety parameters, and retransmit them. If error still occurs, please contact DENSO WAVE service with error number and error message.
854A1770		SLP output setting cross monitoring error	5	Safety monitoring device SLP output setting mismatch is detected.	Please confirm the safety parameters, and retransmit them. If error still occurs, please contact DENSO WAVE service with error number and error message.
854A1771		RSM1 output setting cross monitoring error	5	Safety monitoring device RSM1 output setting mismatch is detected.	Please confirm the safety parameters, and retransmit them. If error still occurs, please contact DENSO WAVE service with error number and error message.
854A1772		RSM2 output setting cross monitoring error	5	Safety monitoring device RSM2 output setting mismatch is detected.	Please confirm the safety parameters, and retransmit them. If error still occurs, please contact DENSO WAVE service with error number and error message.
854A1773		RSM3 output setting cross monitoring error	5	Safety monitoring device RSM3 output setting mismatch is detected.	Please confirm the safety parameters, and retransmit them. If error still occurs, please contact DENSO WAVE service with error number and error message.
854A1774		RPM output setting cross monitoring error	5	Safety monitoring device RPM output setting mismatch is detected.	Please confirm the safety parameters, and retransmit them. If error still occurs, please contact DENSO WAVE service with error number and error message.

Code	RC7 Code	Message	Level	Description	Remedy
854A1775		SOS output setting cross monitoring error	5	Safety monitoring device SOS output setting mismatch is detected.	Please confirm the safety parameters, and retransmit them. If error still occurs, please contact DENSO WAVE service with error number and error message.
854A1776		Safe reference position check output setting cross monitoring error	5	Safety monitoring device safe reference position check output setting mismatch is detected.	Please confirm the safety parameters, and retransmit them. If error still occurs, please contact DENSO WAVE service with error number and error message.
854A1780		Motor ON back check monitor cross monitoring error	5	Safety monitoring device motor ON back check monitor mismatch is detected.	Please contact DENSO WAVE service with error number and error message.
854A1784		Brake release back check monitor cross monitoring error	5	Safety monitoring device brake release back check monitor mismatch is detected.	Please contact DENSO WAVE service with error number and error message.
854A1790		Encoder communication setting cross monitoring error	5	Safety monitoring device encoder communication setting mismatch is detected.	Please confirm the safety parameters, and retransmit them. If error still occurs, please contact DENSO WAVE service with error number and error message.
834A17A0		Emergency-stop input signal cross monitoring error	3	Safety monitoring device emergency-stop input signal mismatch is detected.	Check if there are no short circuit, ground fault, or improper connection for two lines on emergency-stop signal connection. Once you check that all emergency-stop wirings are properly connected, remove the mini I/O connector and then reboot the robot controller. If the error doesn't occur, revise the connection. If the error still occurs, please contact DENSO WAVE service with error number and error message.
834A17A1		Deadman switch input signal cross monitoring error	3	Safety monitoring device deadman switch input signal mismatch is detected.	Please contact DENSO WAVE service with error number and error message.
834A17A2		Enable-auto input signal cross monitoring error	3	Safety monitoring device enable-auto input signal mismatch is detected.	Check if there are no short circuit, ground fault, or improper connection for two lines on enable-auto signal connection. Once you check that all enable-auto wirings are properly connected, remove the mini I/O connector and then reboot the robot controller. If the error doesn't occur, revise the connection. If the error still occurs, please contact DENSO WAVE service with error number and error message.

Code	RC7 Code	Message	Level	Description	Remedy
834A17A3		Protective-stop input signal cross monitoring error	3	Safety monitoring device protective-stop input signal mismatch is detected.	Check if there are no short circuit, ground fault, or improper connection for two lines on protective-stop signal connection. Once you check that all protective-stop wirings are properly connected, remove the mini I/O connector and then reboot the robot controller. If the error doesn't occur, revise the connection. If the error still occurs, please contact DENSO WAVE service with error number and error message.
834A17A4		Manual/auto-mode input signal cross monitoring error	3	Safety monitoring device manual/auto-mode input signal mismatch is detected.	Please contact DENSO WAVE service with error number and error message.
834A17B0		SS2 input signal cross monitoring error	3	Safety monitoring device SS2 input signal mismatch is detected.	Check if there are no short circuit, ground fault, or improper connection for two lines on SS2 signal connection. Once you check that all SS2 wirings are properly connected, remove the safety-motion input connector and then reboot the robot controller. If the error doesn't occur, revise the connection. If the error still occurs, please contact DENSO WAVE service with error number and error message.
834A17B1		RSM1 input signal cross monitoring error	3	Safety monitoring device RSM1 input signal mismatch is detected.	Check if there are no short circuit, ground fault, or improper connection for two lines on RSM1 signal connection. Once you check that all RSM1 wirings are properly connected, remove the safety-motion input connector and then reboot the robot controller. If the error doesn't occur, revise the connection. If the error still occurs, please contact DENSO WAVE service with error number and error message.

Code	RC7 Code	Message	Level	Description	Remedy
834A17B2		RSM2 input signal cross monitoring error	3	Safety monitoring device RSM2 input signal mismatch is detected.	Check if there are no short circuit, ground fault, or improper connection for two lines on RSM2 signal connection. Once you check that all RSM2 wirings are properly connected, remove the safety-motion input connector and then reboot the robot controller. If the error doesn't occur, revise the connection. If the error still occurs, please contact DENSO WAVE service with error number and error message.
834A17B3		RSM3 input signal cross monitoring error	3	Safety monitoring device RSM3 input signal mismatch is detected.	Check if there are no short circuit, ground fault, or improper connection for two lines on RSM3 signal connection. Once you check that all RSM3 wirings are properly connected, remove the safety-motion input connector and then reboot the robot controller. If the error doesn't occur, revise the connection. If the error still occurs, please contact DENSO WAVE service with error number and error message.
834A17B4		Tool number input 0 signal cross monitoring error	3	Safety monitoring device tool number input 0 signal mismatch is detected.	Check if there are no short circuit, ground fault, or improper connection for two lines on tool number input 0 signal connection. Once you check that all tool number input 0 wirings are properly connected, remove the safety-motion input connector and then reboot the robot controller. If the error doesn't occur, revise the connection. If the error still occurs, please contact DENSO WAVE service with error number and error message.
834A17B5		Tool number input 1 signal cross monitoring error	3	Safety monitoring device tool number input 1 signal mismatch is detected.	Check if there are no short circuit, ground fault, or improper connection for two lines on tool number input 1 signal connection. Once you check that all tool number input 1 wirings are properly connected, remove the safety-motion input connector and then reboot the robot controller. If the error doesn't occur, revise the connection. If the error still occurs, please contact DENSO WAVE service with error number and error message.

Code	RC7 Code	Message	Level	Description	Remedy
834A17B6		Tool number input 2 signal cross monitoring error	3	Safety monitoring device tool number input 2 signal mismatch is detected.	Check if there are no short circuit, ground fault, or improper connection for two lines on tool number input 2 signal connection. Once you check that all tool number input 2 wirings are properly connected, remove the safety-motion input connector and then reboot the robot controller. If the error doesn't occur, revise the connection. If the error still occurs, please contact DENSO WAVE service with error number and error message.
834A17B7		Tool number input 3 signal cross monitoring error	3	Safety monitoring device tool number input 3 signal mismatch is detected.	Check if there are no short circuit, ground fault, or improper connection for two lines on tool number input 3 signal connection. Once you check that all tool number input 3 wirings are properly connected, remove the safety-motion input connector and then reboot the robot controller. If the error doesn't occur, revise the connection. If the error still occurs, please contact DENSO WAVE service with error number and error message.
834A17B8		Monitoring area 0 disable input signal cross monitoring error	3	Safety monitoring device monitoring area 0 disable input signal mismatch is detected.	Check if there are no short circuit, ground fault, or improper connection for two lines on monitoring area 0 disable signal connection. Once you check that all monitoring area 0 disable wirings are properly connected, remove the safety-motion input connector and then reboot the robot controller. If the error doesn't occur, revise the connection. If the error still occurs, please contact DENSO WAVE service with error number and error message.

Code	RC7 Code	Message	Level	Description	Remedy
834A17B9		Monitoring area 1 disable input signal cross monitoring error	3	Safety monitoring device monitoring area 1 disable input signal mismatch is detected.	Check if there are no short circuit, ground fault, or improper connection for two lines on monitoring area 1 disable signal connection. Once you check that all monitoring area 1 disable wirings are properly connected, remove the safety-motion input connector and then reboot the robot controller. If the error doesn't occur, revise the connection. If the error still occurs, please contact DENSO WAVE service with error number and error message.
834A17BA		Monitoring area 2 disable input signal cross monitoring error	3	Safety monitoring device monitoring area 2 disable input signal mismatch is detected.	Check if there are no short circuit, ground fault, or improper connection for two lines on monitoring area 2 disable signal connection. Once you check that all monitoring area 2 disable wirings are properly connected, remove the safety-motion input connector and then reboot the robot controller. If the error doesn't occur, revise the connection. If the error still occurs, please contact DENSO WAVE service with error number and error message.
834A17BB		Monitoring area 3 disable input signal cross monitoring error	3	Safety monitoring device monitoring area 3 disable input signal mismatch is detected.	Check if there are no short circuit, ground fault, or improper connection for two lines on monitoring area 3 disable signal connection. Once you check that all monitoring area 3 disable wirings are properly connected, remove the safety-motion input connector and then reboot the robot controller. If the error doesn't occur, revise the connection. If the error still occurs, please contact DENSO WAVE service with error number and error message.

Code	RC7 Code	Message	Level	Description	Remedy
834A17BC		Monitoring disable input signal cross monitoring error	3	Safety monitoring device monitoring disable input signal mismatch is detected.	Check if there are no short circuit, ground fault, or improper connection for two lines on monitoring disable signal connection. Once you check that all monitoring disable wirings are properly connected, remove the safety-motion input connector and then reboot the robot controller. If the error doesn't occur, revise the connection. If the error still occurs, please contact DENSO WAVE service with error number and error message.
834A17BD		SS1 input signal cross monitoring error	3	Safety monitoring device SS1 input signal mismatch is detected.	Check if there are no short circuit, ground fault, or improper connection for two lines on SS1 signal connection. Once you check that all SS1 wirings are properly connected, remove the safety-motion input connector and then reboot the robot controller. If the error doesn't occur, revise the connection. If the error still occurs, please contact DENSO WAVE service with error number and error message.
834A17BE		Safe reference position check input signal cross monitoring error	3	Safety monitoring device safe reference position check input signal mismatch is detected.	Check if there are no short circuit, ground fault, or improper connection for two lines on safe reference position check signal connection. Once you check that all safe reference position check wirings are properly connected, remove the safety-motion input connector and then reboot the robot controller. If the error doesn't occur, revise the connection. If the error still occurs, please contact DENSO WAVE service with error number and error message.

Code	RC7 Code	Message	Level	Description	Remedy
834A17C0		STO monitor output signal cross monitoring error	3	Safety monitoring device STO monitor output signal mismatch is detected.	Check if there are no short circuit, ground fault, or improper connection for two lines on STO monitor signal connection. Once you check that all STO monitor wirings are properly connected, remove the mini I/O connector and then reboot the robot controller. If the error doesn't occur, revise the connection. If the error still occurs, please contact DENSO WAVE service with error number and error message.
834A17C1		Auto-mode output signal cross monitoring error	3	Safety monitoring device auto-mode output signal mismatch is detected.	Check if there are no short circuit, ground fault, or improper connection for two lines on auto-mode signal connection. Once you check that all auto-mode wirings are properly connected, remove the mini I/O connector and then reboot the robot controller. If the error doesn't occur, revise the connection. If the error still occurs, please contact DENSO WAVE service with error number and error message.
834A17D0		SLP output signal cross monitoring error	3	Safety monitoring device SLP output signal mismatch is detected.	Check if there are no short circuit, ground fault, or improper connection for two lines on SLP signal connection. Once you check that all SLP wirings are properly connected, remove the safety-motion output connector and then reboot the robot controller. If the error doesn't occur, revise the connection. If the error still occurs, please contact DENSO WAVE service with error number and error message.
834A17D1		RSM1 output signal cross monitoring error	3	Safety monitoring device RSM1 output signal mismatch is detected.	Check if there are no short circuit, ground fault, or improper connection for two lines on RSM1 signal connection. Once you check that all RSM1 wirings are properly connected, remove the safety-motion output connector and then reboot the robot controller. If the error doesn't occur, revise the connection. If the error still occurs, please contact DENSO WAVE service with error number and error message.

Code	RC7 Code	Message	Level	Description	Remedy
834A17D2		RSM2 output signal cross monitoring error	3	Safety monitoring device RSM2 output signal mismatch is detected.	Check if there are no short circuit, ground fault, or improper connection for two lines on RSM2 signal connection. Once you check that all RSM2 wirings are properly connected, remove the safety-motion output connector and then reboot the robot controller. If the error doesn't occur, revise the connection. If the error still occurs, please contact DENSO WAVE service with error number and error message.
834A17D3		RSM3 output signal cross monitoring error	3	Safety monitoring device RSM3 output signal mismatch is detected.	Check if there are no short circuit, ground fault, or improper connection for two lines on RSM3 signal connection. Once you check that all RSM3 wirings are properly connected, remove the safety-motion output connector and then reboot the robot controller. If the error doesn't occur, revise the connection. If the error still occurs, please contact DENSO WAVE service with error number and error message.
834A17D4		RPM output signal cross monitoring error	3	Safety monitoring device RPM output signal mismatch is detected.	Check if there are no short circuit, ground fault, or improper connection for two lines on RPM signal connection. Once you check that all RPM wirings are properly connected, remove the safety-motion output connector and then reboot the robot controller. If the error doesn't occur, revise the connection. If the error still occurs, please contact DENSO WAVE service with error number and error message.
834A17D5		SOS output signal cross monitoring error	3	Safety monitoring device SOS output signal mismatch is detected.	Check if there are no short circuit, ground fault, or improper connection for two lines on SOS signal connection. Once you check that all SOS wirings are properly connected, remove the safety-motion output connector and then reboot the robot controller. If the error doesn't occur, revise the connection. If the error still occurs, please contact DENSO WAVE service with error number and error message.

Code	RC7 Code	Message	Level	Description	Remedy
834A17D6		Safe reference position check output signal cross monitoring error	3	Safety monitoring device safe reference position check output signal mismatch is detected.	Check if there are no short circuit, ground fault, or improper connection for two lines on safe reference position check signal connection. Once you check that all safe reference position check wirings are properly connected, remove the safety-motion output connector and then reboot the robot controller. If the error doesn't occur, revise the connection. If the error still occurs, please contact DENSO WAVE service with error number and error message.
834A17E0		Motor ON status cross monitoring error	3	Safety monitoring device motor ON status mismatch is detected.	Please contact DENSO WAVE service with error number and error message.
834A17E1		Brake release status cross monitoring error	3	Safety monitoring device brake release status mismatch is detected.	Please contact DENSO WAVE service with error number and error message.
854A17F0		Emergency-stop input signal diagnosis setting cross monitoring error	5	Safety monitoring device emergency-stop input signal diagnosis setting mismatch is detected.	Please confirm the safety parameters, and retransmit them. If error still occurs, please contact DENSO WAVE service with error number and error message.
854A17F1		Deadman switch input signal diagnosis setting cross monitoring error	5	Safety monitoring device deadman switch input signal diagnosis setting mismatch is detected.	Please confirm the safety parameters, and retransmit them. If error still occurs, please contact DENSO WAVE service with error number and error message.
854A17F2		Enable-auto input signal diagnosis setting cross monitoring error	5	Safety monitoring device enable-auto input signal diagnosis setting mismatch is detected.	Please confirm the safety parameters, and retransmit them. If error still occurs, please contact DENSO WAVE service with error number and error message.
854A17F3		Protective-stop input signal diagnosis setting cross monitoring error	5	Safety monitoring device protective-stop input signal diagnosis setting mismatch is detected.	Please confirm the safety parameters, and retransmit them. If error still occurs, please contact DENSO WAVE service with error number and error message.
854A17F4		Auto/manual-mode input signal diagnosis setting cross monitoring error	5	Safety monitoring device auto/manual-mode input signal diagnosis setting mismatch is detected.	Please confirm the safety parameters, and retransmit them. If error still occurs, please contact DENSO WAVE service with error number and error message.

Code	RC7 Code	Message	Level	Description	Remedy
854A1801		Motor off function for deadman switch diagnosis setting cross monitoring error	5	Safety monitoring device motor off function for deadman switch diagnosis setting mismatch is detected.	Please confirm the safety parameters, and retransmit them. If error still occurs, please contact DENSO WAVE service with error number and error message.
854A1810		Controller type cross monitoring error	5	Safety monitoring device controller type mismatch is detected.	Please confirm the safety parameters, and retransmit them. If error still occurs, please contact DENSO WAVE service with error number and error message.
854A1900		Motor on lamp main circuit error	5	Motor on lamp main circuit error	Please contact DENSO WAVE service with error number and error message.
854A1901		Motor on lamp 1 circuit error	5	Motor on lamp 1 circuit error	Please contact DENSO WAVE service with error number and error message.
854A1902		Motor on lamp 2 circuit error	5	Motor on lamp 2 circuit error	Please contact DENSO WAVE service with error number and error message.
834A1A00		Area-sensor SS2 signal input circuit 1 diagnosis signal is undetected	3	Diagnosis signal is undetected at safety-motion I/O area-sensor SS2 signal input circuit 1.	Please confirm the safety parameters, and retransmit them. If error still occurs, check if there are no short circuit, ground fault, or improper connection for two lines on SS2 signal connection. Once you check that all SS2 wirings are properly connected, remove the safety-motion input connector and then reboot the robot controller. If the error doesn't occur, revise the connection. If the error still occurs, please contact DENSO WAVE service with error number and error message.
834A1A01		Area-sensor SS2 signal input circuit 2 diagnosis signal is undetected	3	Diagnosis signal is undetected at safety-motion I/O area-sensor SS2 signal input circuit 2.	Please confirm the safety parameters, and retransmit them. If error still occurs, check if there are no short circuit, ground fault, or improper connection for two lines on SS2 signal connection. Once you check that all SS2 wirings are properly connected, remove the safety-motion input connector and then reboot the robot controller. If the error doesn't occur, revise the connection. If the error still occurs, please contact DENSO WAVE service with error number and error message.

Code	RC7 Code	Message	Level	Description	Remedy
834A1A02		Area-sensor SS2 signal input circuit 1 diagnosis signal failure	3	Diagnosis signal failure is detected at safety-motion I/O area-sensor SS2 signal input circuit 1.	Please confirm the safety parameters, and retransmit them. If error still occurs, check if there are no short circuit, ground fault, or improper connection for two lines on SS2 signal connection. Once you check that all SS2 wirings are properly connected, remove the safety-motion input connector and then reboot the robot controller. If the error doesn't occur, revise the connection. If the error still occurs, please contact DENSO WAVE service with error number and error message.
834A1A03		Area-sensor SS2 signal input circuit 2 diagnosis signal failure	3	Diagnosis signal failure is detected at safety-motion I/O area-sensor SS2 signal input circuit 2.	Please confirm the safety parameters, and retransmit them. If error still occurs, check if there are no short circuit, ground fault, or improper connection for two lines on SS2 signal connection. Once you check that all SS2 wirings are properly connected, remove the safety-motion input connector and then reboot the robot controller. If the error doesn't occur, revise the connection. If the error still occurs, please contact DENSO WAVE service with error number and error message.
834A1A04		Area-sensor RSM1 signal input circuit 1 diagnosis signal is undetected	3	Diagnosis signal is undetected at safety-motion I/O area-sensor RSM1 signal input circuit 1.	Please confirm the safety parameters, and retransmit them. If error still occurs, check if there are no short circuit, ground fault, or improper connection for two lines on RSM1 signal connection. Once you check that all RSM1 wirings are properly connected, remove the safety-motion input connector and then reboot the robot controller. If the error doesn't occur, revise the connection. If the error still occurs, please contact DENSO WAVE service with error number and error message.

Code	RC7 Code	Message	Level	Description	Remedy
834A1A05		Area-sensor RSM1 signal input circuit 2 diagnosis signal is undetected	3	Diagnosis signal is undetected at safety-motion I/O area-sensor RSM1 signal input circuit 2.	Please confirm the safety parameters, and retransmit them. If error still occurs, check if there are no short circuit, ground fault, or improper connection for two lines on RSM1 signal connection. Once you check that all RSM1 wirings are properly connected, remove the safety-motion input connector and then reboot the robot controller. If the error doesn't occur, revise the connection. If the error still occurs, please contact DENSO WAVE service with error number and error message.
834A1A06		Area-sensor RSM1 signal input circuit 1 diagnosis signal failure	3	Diagnosis signal failure is detected at safety-motion I/O area-sensor RSM1 signal input circuit 1.	Please confirm the safety parameters, and retransmit them. If error still occurs, check if there are no short circuit, ground fault, or improper connection for two lines on RSM1 signal connection. Once you check that all RSM1 wirings are properly connected, remove the safety-motion input connector and then reboot the robot controller. If the error doesn't occur, revise the connection. If the error still occurs, please contact DENSO WAVE service with error number and error message.
834A1A07		Area-sensor RSM1 signal input circuit 2 diagnosis signal failure	3	Diagnosis signal failure is detected at safety-motion I/O area-sensor RSM1 signal input circuit 2.	Please confirm the safety parameters, and retransmit them. If error still occurs, check if there are no short circuit, ground fault, or improper connection for two lines on RSM1 signal connection. Once you check that all RSM1 wirings are properly connected, remove the safety-motion input connector and then reboot the robot controller. If the error doesn't occur, revise the connection. 834A1A08		Area-sensor RSM2 signal input circuit 1 diagnosis signal is undetected	3	Diagnosis signal is undetected at safety-motion I/O area-sensor RSM2 signal input circuit 1.	Please confirm the safety parameters, and retransmit them. If error still occurs, check if there are no short circuit, ground fault, or improper connection for two lines on RSM2 signal connection. Once you check that all RSM2 wirings are properly connected, remove the safety-motion input connector and then reboot the robot controller. If the error doesn't occur, revise the connection. If the error still occurs, please contact DENSO WAVE service with error number and error message.
834A1A09		Area-sensor RSM2 signal input circuit 2 diagnosis signal is undetected	3	Diagnosis signal is undetected at safety-motion I/O area-sensor RSM2 signal input circuit 2.	Please confirm the safety parameters, and retransmit them. If error still occurs, check if there are no short circuit, ground fault, or improper connection for two lines on RSM2 signal connection. Once you check that all RSM2 wirings are properly connected, remove the safety-motion input connector and then reboot the robot controller. If the error doesn't occur, revise the connection. If the error still occurs, please contact DENSO WAVE service with error number and error message.
834A1A0A		Area-sensor RSM2 signal input circuit 1 diagnosis signal failure	3	Diagnosis signal failure is detected at safety-motion I/O area-sensor RSM2 signal input circuit 1.	Please confirm the safety parameters, and retransmit them. If error still occurs, check if there are no short circuit, ground fault, or improper connection for two lines on RSM2 signal connection. Once you check that all RSM2 wirings are properly connected, remove the safety-motion input connector and then reboot the robot controller. If the error doesn't occur, revise the connection. If the error still occurs, please contact DENSO WAVE service with error number and error message.

834A1A38		Area-sensor safe reference position check signal input circuit 1 diagnosis signal is undetected	3	Diagnosis signal is undetected at safety-motion I/O area-sensor safe reference position check signal input circuit 1.	Please confirm the safety parameters, and retransmit them. If error still occurs, check if there are no short circuit, ground fault, or improper connection for two lines on safe reference position check signal connection. Once you check that all safe reference position check wirings are properly connected, remove the safety-motion input connector and then reboot the robot controller. If the error doesn't occur, revise the connection. If the error still occurs, please contact DENSO WAVE service with error number and error message.
834A1A39		Area-sensor safe reference position check signal input circuit 2 diagnosis signal is undetected	3	Diagnosis signal is undetected at safety-motion I/O area-sensor safe reference position check signal input circuit 2.	Please confirm the safety parameters, and retransmit them. If error still occurs, check if there are no short circuit, ground fault, or improper connection for two lines on safe reference position check signal connection. Once you check that all safe reference position check wirings are properly connected, remove the safety-motion input connector and then reboot the robot controller. If the error doesn't occur, revise the connection. If the error still occurs, please contact DENSO WAVE service with error number and error message.
834A1A3A		Area-sensor safe reference position check signal input circuit 1 diagnosis signal failure	3	Diagnosis signal failure is detected at safety-motion I/O area-sensor safe reference position check signal input circuit 1.	Please confirm the safety parameters, and retransmit them. If error still occurs, check if there are no short circuit, ground fault, or improper connection for two lines on safe reference position check signal connection. Once you check that all safe reference position check wirings are properly connected, remove the safety-motion input connector and then reboot the robot controller. If the error doesn't occur, revise the connection. If the error still occurs, please contact DENSO WAVE service with error number and error message.

85491832	660A	RSC speed setting signal input terminal configuration failure. (SAIO)	5	Safety I/O safety input terminal ch18 (RSC speed setting signal input terminal) configuration is wrong.	Please contact DENSO WAVE service with error number and error message.
85491833	660A	RSC override signal input terminal configuration failure. (SAIO)	5	Safety I/O safety input terminal ch19 (RSC override signal input terminal) configuration is wrong.	Please contact DENSO WAVE service with error number and error message.
85491840	660A	Emergency-stop signal input terminal 1 externally connected device failure. (SAIO)	5	External device connection failure is detected at Safety I/O safety input terminal ch0 (Emergency-stop signal input terminal 1).	For Emergency-stop 1 signal connections, check if there are no short circuit, ground fault, or improper connection between two Emergency-stop signal lines. Once you check that all Emergency-stop 1 wirings are properly connected, remove the Mini I/O connector and then reboot the robot controller. If the error doesn't occur, revise the connection. If the error still occurs, please contact DENSO WAVE service with error number and error message.
85491841	660A	Emergency-stop signal input terminal 2 externally connected device failure. (SAIO)	5	External device connection failure is detected at Safety I/O safety input terminal ch1 (Emergency-stop signal input terminal 2).	For Emergency-stop 2 signal connections, check if there are no short circuit, ground fault, or improper connection between two Emergency-stop signal lines. Once you check that all Emergency-stop 1 wirings are properly connected, remove the Mini I/O connector and then reboot the robot controller. If the error doesn't occur, revise the connection. If the error still occurs, please contact DENSO WAVE service with error number and error message.

Code	RC7 Code	Message	Level	Description	Remedy
85491842	660A	Enable-auto signal input terminal 1 externally connected device failure. (SAIO)	5	External device connection failure is detected at Safety I/O safety input terminal ch2 (Enable-auto signal input terminal 1).	For Enable-auto 1 signal connections, check if there are no short circuit, ground fault, or improper connection between two Enable-auto signal lines. Once you check that all Enable-auto 1 wirings are properly connected, remove the Mini I/O connector and then reboot the robot controller. If the error doesn't occur, revise the connection. If the error still occurs, please contact DENSO WAVE service with error number and error message.
85491843	660A	Enable-auto signal input terminal 2 externally connected device failure. (SAIO)	5	External device connection failure is detected at Safety I/O safety input terminal ch3 (Enable-auto signal input terminal 2).	For Enable-auto 2 signal connections, check if there are no short circuit, ground fault, or improper connection between two Enable-auto signal lines. Once you check that all Enable-auto 2 wirings are properly connected, remove the Mini I/O connector and then reboot the robot controller. If the error doesn't occur, revise the connection. If the error still occurs, please contact DENSO WAVE service with error number and error message.
85491844	660A	Protective-stop signal input terminal 1 externally connected device failure. (SAIO)	5	External device connection failure is detected at Safety I/O safety input terminal ch4 (Protective-stop signal input terminal 1).	For Protective-stop 1 signal connections, check if there are no short circuit, ground fault, or improper connection between two Protective-stop signal lines. Once you check that all Protective-stop 1 wirings are properly connected, remove the Mini I/O connector and then reboot the robot controller. If the error doesn't occur, revise the connection. If the error still occurs, please contact DENSO WAVE service with error number and error message.
85491845	660A	Protective-stop signal input terminal 2 externally connected device failure. (SAIO)	5	External device connection failure is detected at Safety I/O safety input terminal ch5 (Protective-stop signal input terminal 2).	For Protective-stop 2 signal connections, check if there are no short circuit, ground fault, or improper connection between two Protective-stop signal lines. Once you check that all Protective-stop 2 wirings are properly connected, remove the Mini I/O connector and then reboot the robot controller. If the error doesn't occur, revise the connection. If the error still occurs, please contact DENSO WAVE service with error number and error message.

Code	RC7 Code	Message	Level	Description	Remedy
85491846	660A	Motor-OFF signal input terminal externally connected device failure. (SAIO)	5	External device connection failure is detected at Safety I/O safety input terminal ch6 (Motor-OFF signal input terminal).	Please contact DENSO WAVE service with error number and error message.
85491847	660A	Motor-ON signal input terminal externally connected device failure. (SAIO)	5	External device connection failure is detected at Safety I/O safety input terminal ch7 (Motor-ON signal input terminal).	Please contact DENSO WAVE service with error number and error message.
85491848	660A	Internal Emergency-stop signal input terminal 1 externally connected device failure. (SAIO)	5	External device connection failure is detected at Safety I/O safety input terminal ch8 (Internal Emergency-stop signal input terminal 1).	Please contact DENSO WAVE service with error number and error message.
85491849	660A	Internal Emergency-stop signal input terminal 2 externally connected device failure. (SAIO)	5	External device connection failure is detected at Safety I/O safety input terminal ch9 (Internal Emergency-stop signal input terminal 2).	Please contact DENSO WAVE service with error number and error message.
8549184A	660A	Deadman switch signal input terminal 1 externally connected device failure. (SAIO)	5	External device connection failure is detected at Safety I/O safety input terminal ch10 (Deadman switch signal input terminal 1).	Replace the teach pendant. If the error still occurs, please contact DENSO WAVE service with error number and error message.
8549184B	660A	Deadman switch signal input terminal 2 externally connected device failure. (SAIO)	5	External device connection failure is detected at Safety I/O safety input terminal ch11 (Deadman switch signal input terminal 2).	Replace the teach pendant. If the error still occurs, please contact DENSO WAVE service with error number and error message.
8549184C	660A	Contactor-ON back check signal input terminal 1 externally connected device failure. (SAIO)	5	External device connection failure is detected at Safety I/O safety input terminal ch12 (Contactor-ON back check signal input terminal 1).	Please contact DENSO WAVE service with error number and error message.
8549184D	660A	Contactor-ON back check signal input terminal 2 externally connected device failure. (SAIO)	5	External device connection failure is detected at Safety I/O safety input terminal ch13 (Contactor-ON back check signal input terminal 2).	Please contact DENSO WAVE service with error number and error message.
8549184E	660A	Manual mode signal input terminal externally connected device failure. (SAIO)	5	External device connection failure is detected at Safety I/O safety input terminal ch14 (Manual mode signal input terminal).	Replace the teach pendant. If the error still occurs, please contact DENSO WAVE service with error number and error message.
8549184F	660A	Auto mode signal input terminal externally connected device failure. (SAIO)	5	External device connection failure is detected at Safety I/O safety input terminal ch15 (Auto mode signal input terminal).	Replace the teach pendant. If the error still occurs, please contact DENSO WAVE service with error number and error message.
85491850	660A	CPU normal signal input terminal externally connected device failure. (SAIO)	5	External device connection failure is detected at Safety I/O safety input terminal ch16 (CPU normal signal input terminal).	Please contact DENSO WAVE service with error number and error message.
85491851	660A	RSC teach signal input terminal externally connected device failure. (SAIO)	5	External device connection failure is detected at Safety I/O safety input terminal ch17 (RSC teach signal input terminal).	Please contact DENSO WAVE service with error number and error message.

Code	RC7 Code	Message	Level	Description	Remedy
85491852	660A	RSC speed setting signal input terminal externally connected device failure. (SAIO)	5	External device connection failure is detected at Safety I/O safety input terminal ch18 (RSC speed setting signal input terminal).	Please contact DENSO WAVE service with error number and error message.
85491853	660A	RSC override signal input terminal externally connected device failure. (SAIO)	5	External device connection failure is detected at Safety I/O safety input terminal ch19 (RSC override signal input terminal).	Please contact DENSO WAVE service with error number and error message.
85491860	660A	Emergency-stop signal input terminal 1 internal circuit failure. (SAIO)	5	Internal circuit failure detected at Safety I/O safety input terminal ch0 (Emergency-stop signal input terminal 1).	Please contact DENSO WAVE service with error number and error message.
85491861	660A	Emergency-stop signal input terminal 2 internal circuit failure. (SAIO)	5	Internal circuit failure detected at Safety I/O safety input terminal ch1 (Emergency-stop signal input terminal 2).	Please contact DENSO WAVE service with error number and error message.
85491862	660A	Enable-auto signal input terminal 1 internal circuit failure. (SAIO)	5	Internal circuit failure detected at Safety I/O safety input terminal ch2 (Enable-auto signal input terminal 1).	Please contact DENSO WAVE service with error number and error message.
85491863	660A	Enable-auto signal input terminal 2 internal circuit failure. (SAIO)	5	Internal circuit failure detected at Safety I/O safety input terminal ch3 (Enable-auto signal input terminal 2).	Please contact DENSO WAVE service with error number and error message.
85491864	660A	Protective-stop signal input terminal 1 internal circuit failure. (SAIO)	5	Internal circuit failure detected at Safety I/O safety input terminal ch4 (Protective-stop signal input terminal 1).	Please contact DENSO WAVE service with error number and error message.
85491865	660A	Protective-stop signal input terminal 2 internal circuit failure. (SAIO)	5	Internal circuit failure detected at Safety I/O safety input terminal ch5 (Protective-stop signal input terminal 2).	Please contact DENSO WAVE service with error number and error message.
85491866	660A	Motor-OFF signal input terminal internal circuit failure. (SAIO)	5	Internal circuit failure detected at Safety I/O safety input terminal ch6 (Motor-OFF signal input terminal).	Please contact DENSO WAVE service with error number and error message.
85491867	660A	Motor-ON signal input terminal internal circuit failure. (SAIO)	5	Internal circuit failure detected at Safety I/O safety input terminal ch7 (Motor-ON signal input terminal).	Please contact DENSO WAVE service with error number and error message.
85491868	660A	Internal Emergency-stop signal input terminal 1 internal circuit failure. (SAIO)	5	Internal circuit failure detected at Safety I/O safety input terminal ch8 (Internal Emergency-stop signal input terminal 1).	Please contact DENSO WAVE service with error number and error message.
85491869	660A	Internal Emergency-stop signal input terminal 2 internal circuit failure. (SAIO)	5	Internal circuit failure detected at Safety I/O safety input terminal ch9 (Internal Emergency-stop signal input terminal 2).	Please contact DENSO WAVE service with error number and error message.

Code	RC7 Code	Message	Level	Description	Remedy
8549186A	660A	Deadman switch signal input terminal 1 internal circuit failure. (SAIO)	5	Internal circuit failure detected at Safety I/O safety input terminal ch10 (Deadman switch signal input terminal 1).	Please contact DENSO WAVE service with error number and error message.
8549186B	660A	Deadman switch signal input terminal 2 internal circuit failure. (SAIO)	5	Internal circuit failure detected at Safety I/O safety input terminal ch11 (Deadman switch signal input terminal 2).	Please contact DENSO WAVE service with error number and error message.
8549186C	660A	Contactor-ON back check signal input terminal 1 internal circuit failure. (SAIO)	5	Internal circuit failure detected at Safety I/O safety input terminal ch12 (Contactor-ON back check signal input terminal 1).	Please contact DENSO WAVE service with error number and error message.
8549186D	660A	Contactor-ON back check signal input terminal 2 internal circuit failure. (SAIO)	5	Internal circuit failure detected at Safety I/O safety input terminal ch13 (Contactor-ON back check signal input terminal 2).	Please contact DENSO WAVE service with error number and error message.
8549186E	660A	Manual mode signal input terminal internal circuit failure. (SAIO)	5	Internal circuit failure detected at Safety I/O safety input terminal ch14 (Manual mode signal input terminal).	Please contact DENSO WAVE service with error number and error message.
8549186F	660A	Auto mode signal input terminal internal circuit failure. (SAIO)	5	Internal circuit failure detected at Safety I/O safety input terminal ch15 (Auto mode signal input terminal).	Please contact DENSO WAVE service with error number and error message.
85491870	660A	CPU normal signal input terminal internal circuit failure. (SAIO)	5	Internal circuit failure detected at Safety I/O safety input terminal ch16 (CPU normal signal input terminal).	Please contact DENSO WAVE service with error number and error message.
85491871	660A	RSC teach signal input terminal internal circuit failure. (SAIO)	5	Internal circuit failure detected at Safety I/O safety input terminal ch17 (RSC teach signal input terminal).	Please contact DENSO WAVE service with error number and error message.
85491872	660A	RSC speed setting signal input terminal internal circuit failure. (SAIO)	5	Internal circuit failure detected at Safety I/O safety input terminal ch18 (RSC speed setting signal input terminal).	Please contact DENSO WAVE service with error number and error message.
85491873	660A	RSC override signal input terminal internal circuit failure. (SAIO)	5	Internal circuit failure detected at Safety I/O safety input terminal ch19 (RSC override signal input terminal).	Please contact DENSO WAVE service with error number and error message.

Code	RC7 Code	Message	Level	Description	Remedy
84491880	660A	Emergency-stop signal input terminal 1 dual channel monitoring failure. (SAIO)	4	Dual channel input logic failure at Safety I/O safety input terminal ch0 (Emergency-stop signal input terminal 1).	Check if there are no short circuit, ground fault, or improper connection for two lines on Emergency-stop signal connection. Once you check that all Emergency-stop wirings are properly connected, remove the Mini I/O connector and then reboot the robot controller. If the error doesn't occur, revise the connection. If the error still occurs, please contact DENSO WAVE service with error number and error message.
84491881	660A	Emergency-stop signal input terminal 2 dual channel monitoring failure. (SAIO)	4	Dual channel input logic failure at Safety I/O safety input terminal ch1 (Emergency-stop signal input terminal 2).	Check if there are no short circuit, ground fault, or improper connection for two lines on Emergency-stop signal connection. Once you check that all Emergency-stop wirings are properly connected, remove the Mini I/O connector and then reboot the robot controller. If the error doesn't occur, revise the connection. If the error still occurs, please contact DENSO WAVE service with error number and error message.
84491882	660A	Enable-auto signal input terminal 1 dual channel monitoring failure. (SAIO)	4	Dual channel input logic failure at Safety I/O safety input terminal ch2 (Enable-auto signal input terminal 1).	Check if there are no short circuit, ground fault, or improper connection for two lines on Enable-auto signal connection. Once you check that all Enable-auto wirings are properly connected, remove the Mini I/O connector and then reboot the robot controller. If the error doesn't occur, revise the connection. If the error still occurs, please contact DENSO WAVE service with error number and error message.
84491883	660A	Enable-auto signal input terminal 2 dual channel monitoring failure. (SAIO)	4	Dual channel input logic failure at Safety I/O safety input terminal ch3 (Enable-auto signal input terminal 2).	Check if there are no short circuit, ground fault, or improper connection for two lines on Enable-auto signal connection. Once you check that all Enable-auto wirings are properly connected, remove the Mini I/O connector and then reboot the robot controller. If the error doesn't occur, revise the connection. If the error still occurs, please contact DENSO WAVE service with error number and error message.

Code	RC7 Code	Message	Level	Description	Remedy
84491884	660A	Protective-stop signal input terminal 1 dual channel monitoring failure. (SAIO)	4	Dual channel input logic failure at Safety I/O safety input terminal ch4 (Protective-stop signal input terminal 1).	Check if there are no short circuit, ground fault, or improper connection for two lines on Protective-stop signal connection. Once you check that all Protective-stop wirings are properly connected, remove the Mini I/O connector and then reboot the robot controller. If the error doesn't occur, revise the connection. If the error still occurs, please contact DENSO WAVE service with error number and error message.
84491885	660A	Protective-stop signal input terminal 2 dual channel monitoring failure. (SAIO)	4	Dual channel input logic failure at Safety I/O safety input terminal ch5 (Protective-stop signal input terminal 2).	Check if there are no short circuit, ground fault, or improper connection for two lines on Protective-stop signal connection. Once you check that all Protective-stop wirings are properly connected, remove the Mini I/O connector and then reboot the robot controller. If the error doesn't occur, revise the connection. If the error still occurs, please contact DENSO WAVE service with error number and error message.
84491886	660A	Motor-OFF signal input terminal dual channel monitoring failure. (SAIO)	4	Dual channel input logic failure at Safety I/O safety input terminal ch6 (Motor-OFF signal input terminal).	Please contact DENSO WAVE service with error number and error message.
84491887	660A	Motor-ON signal input terminal dual channel monitoring failure. (SAIO)	4	Dual channel input logic failure at Safety I/O safety input terminal ch7 (Motor-ON signal input terminal).	Please contact DENSO WAVE service with error number and error message.
84491888	660A	Internal Emergency-stop signal input terminal 1 dual channel monitoring failure. (SAIO)	4	Dual channel input logic failure at Safety I/O safety input terminal ch8 (Internal Emergency-stop signal input terminal 1).	Please contact DENSO WAVE service with error number and error message.
84491889	660A	Internal Emergency-stop signal input terminal 2 dual channel monitoring failure. (SAIO)	4	Dual channel input logic failure at Safety I/O safety input terminal ch9 (Internal Emergency-stop signal input terminal 2).	Please contact DENSO WAVE service with error number and error message.
8449188A	660A	Deadman switch signal input terminal 1 dual channel monitoring failure. (SAIO)	4	Dual channel input logic failure at Safety I/O safety input terminal ch10 (Deadman switch signal input terminal 1).	Replace the teach pendant. If the error still occurs, please contact DENSO WAVE service with error number and error message.
8449188B	660A	Deadman switch signal input terminal 2 dual channel monitoring failure. (SAIO)	4	Dual channel input logic failure at Safety I/O safety input terminal ch11 (Deadman switch signal input terminal 2).	Replace the teach pendant. If the error still occurs, please contact DENSO WAVE service with error number and error message.

854919EA	660A	Safety output terminal ch10 dual channel output data mismatch failure. (SAIO)	5	Dual channel output data inconsistency is detected at Safety I/O safety output terminal ch10.	Please contact DENSO WAVE service with error number and error message.
854919EB	660A	Safety output terminal ch11 dual channel output data mismatch failure. (SAIO)	5	Dual channel output data inconsistency is detected at Safety I/O safety output terminal ch11.	Please contact DENSO WAVE service with error number and error message.
854919EC	660A	Safety output terminal ch12 dual channel output data mismatch failure. (SAIO)	5	Dual channel output data inconsistency is detected at Safety I/O safety output terminal ch12.	Please contact DENSO WAVE service with error number and error message.
854919ED	660A	Safety output terminal ch13 dual channel output data mismatch failure. (SAIO)	5	Dual channel output data inconsistency is detected at Safety I/O safety output terminal ch13.	Please contact DENSO WAVE service with error number and error message.
854919EE	660A	Safety output terminal ch14 dual channel output data mismatch failure. (SAIO)	5	Dual channel output data inconsistency is detected at Safety I/O safety output terminal ch14.	Please contact DENSO WAVE service with error number and error message.
854919EF	660A	Safety output terminal ch15 dual channel output data mismatch failure. (SAIO)	5	Dual channel output data inconsistency is detected at Safety I/O safety output terminal ch15.	Please contact DENSO WAVE service with error number and error message.
854919F0	660A	Safety output terminal ch16 dual channel output data mismatch failure. (SAIO)	5	Dual channel output data inconsistency is detected at Safety I/O safety output terminal ch16.	Please contact DENSO WAVE service with error number and error message.
854919F1	660A	Safety output terminal ch17 dual channel output data mismatch failure. (SAIO)	5	Dual channel output data inconsistency is detected at Safety I/O safety output terminal ch17.	Please contact DENSO WAVE service with error number and error message.
854919F2	660A	Safety output terminal ch18 dual channel output data mismatch failure. (SAIO)	5	Dual channel output data inconsistency is detected at Safety I/O safety output terminal ch18.	Please contact DENSO WAVE service with error number and error message.
854919F3	660A	Safety output terminal ch19 dual channel output data mismatch failure. (SAIO)	5	Dual channel output data inconsistency is detected at Safety I/O safety output terminal ch19.	Please contact DENSO WAVE service with error number and error message.
85492001	660A	Emergency-stop circuit failure 1	5	Emergency-stop circuit 1 signal is turned ON but the Safety I/O recognizes the signal is OFF.	Please contact DENSO WAVE service with error number and error message.
85492002	660A	Emergency-stop circuit failure 2	5	Emergency-stop circuit 1 signal is turned OFF but the Safety I/O recognizes the signal is ON.	Please contact DENSO WAVE service with error number and error message.
85492003	660A	Emergency-stop circuit failure 3	5	Emergency-stop circuit 2 signal is turned ON but the Safety I/O recognizes the signal is OFF.	Please contact DENSO WAVE service with error number and error message.

Code	RC7 Code	Message	Level	Description	Remedy
85492004	660A	Emergency-stop circuit failure 4	5	Emergency-stop circuit 2 signal is turned OFF but the Safety I/O recognizes the signal is ON.	Please contact DENSO WAVE service with error number and error message.
85492011	660A	Internal Emergency-stop circuit failure 1	5	Internal Emergency-stop circuit 1 signal is turned ON but the Safety I/O recognizes the signal is OFF.	Please contact DENSO WAVE service with error number and error message.
85492012	660A	Internal Emergency-stop circuit failure 2	5	Internal Emergency-stop circuit 1 signal is turned OFF but the Safety I/O recognizes the signal is ON.	Please contact DENSO WAVE service with error number and error message.
85492013	660A	Internal Emergency-stop circuit failure 3	5	Internal Emergency-stop circuit 2 signal is turned ON but the Safety I/O recognizes the signal is OFF.	Please contact DENSO WAVE service with error number and error message.
85492014	660A	Internal Emergency-stop circuit failure 4	5	Internal Emergency-stop circuit 2 signal is turned OFF but the Safety I/O recognizes the signal is ON.	Please contact DENSO WAVE service with error number and error message.
85492021	660A	Deadman switch circuit failure 1	5	Deadman switch circuit 1signal is turned ON but the Safety I/O recognizes the signal is OFF.	Please contact DENSO WAVE service with error number and error message.
85492022	660A	Deadman switch circuit failure 2	5	Deadman switch circuit 1 signal is turned OFF but the Safety I/O recognizes the signal is ON.	Please contact DENSO WAVE service with error number and error message.
85492023	660A	Deadman switch circuit failure 3	5	Deadman switch circuit 2 signal is turned ON but the Safety I/O recognizes the signal is OFF.	Please contact DENSO WAVE service with error number and error message.
85492024	660A	Deadman switch circuit failure 4	5	Deadman switch circuit 2 signal is turned OFF but the Safety I/O recognizes the signal is ON.	Please contact DENSO WAVE service with error number and error message.
85492031	660A	Protective-stop circuit failure 1	5	Protective-stop circuit 1 signal is turned ON but the Safety I/O recognizes the signal is OFF.	Please contact DENSO WAVE service with error number and error message.
85492032	660A	Protective-stop circuit failure 2	5	Protective-stop circuit 1signal is turned OFF but the Safety I/O recognizes the signal is ON.	Please contact DENSO WAVE service with error number and error message.
85492033	660A	Protective-stop circuit failure 3	5	Protective-stop circuit 2 signal is turned ON but the Safety I/O recognizes the signal is OFF.	Please contact DENSO WAVE service with error number and error message.
85492034	660A	Protective-stop circuit failure 4	5	Protective-stop circuit 2 signal is turned OFF but the Safety I/O recognizes the signal is ON.	Please contact DENSO WAVE service with error number and error message.
85492041	660A	Enable-auto circuit failure 1	5	Enable-auto circuit 1 signal is turned ON but the Safety I/O recognizes the signal is OFF.	Please contact DENSO WAVE service with error number and error message.
85492042	660A	Enable-auto circuit failure 2	5	Enable-auto circuit 1 signal is turned OFF but the Safety I/O recognizes the signal is ON.	Please contact DENSO WAVE service with error number and error message.
85492043	660A	Enable-auto circuit failure 3	5	Enable-auto circuit 2 signal is turned ON but the Safety I/O recognizes the signal is OFF.	Please contact DENSO WAVE service with error number and error message.

Code	RC7 Code	Message	Level	Description	Remedy
85492044	660A	Enable-auto circuit failure 4	5	Enable-auto circuit 2 signal is turned OFF but the Safety I/O recognizes the signal is ON.	Please contact DENSO WAVE service with error number and error message.
85492051	660A	CPU normal circuit failure.	5	CPU normal circuit signal is turned ON but the Safety I/O recognizes the signal is OFF.	Please contact DENSO WAVE service with error number and error message.
85492061	660F	Safety contactor circuit failure (ON1)	5	Motor-ON signal is turned ON but the Safety contactor is OFF.	Please contact DENSO WAVE service with error number and error message.
85492062	660F	Safety contactor circuit failure (ON2)	5	Motor-ON signal is turned ON but the Safety contactor-ON signal is OFF.	Turn ON the robot controller while the deadman switch is OFF state. If the error still occurs, please contact DENSO WAVE service with error number and error message.
85492063	660F	Safety contactor circuit failure (ON3)	5	Tried to turn ON the Safety contactor but the Motor-ON signal is OFF.	Please contact DENSO WAVE service with error number and error message.
85492064	660F	Safety contactor circuit failure (ON4)	5	Tried to turn ON the Safety contactor but the Motor-ON enabling signal is turned OFF.	Please contact DENSO WAVE service with error number and error message.
85492071	660F	Safety contactor circuit failure (OFF1)	5	Motor-ON signal is turned OFF but the Safety contactor is ON.	Please contact DENSO WAVE service with error number and error message.
85492072	660F	Safety contactor circuit failure (OFF2)	5	Motor-ON signal is turned OFF but the Safety contactor-on signal is ON.	Please contact DENSO WAVE service with error number and error message.
85492073	660F	Safety contactor circuit failure (OFF3)	5	Tried to turn OFF the Safety contactor but the Motor-ON signal is ON.	Please contact DENSO WAVE service with error number and error message.
84492081	660A	Motor-ON enabling signal timeout	4	Motor-ON processing was interrupted due to the inconsistency of signal status. Input signal for Safety I/O is "Motor-ON Enable state" but the Safety I/O does not issue Motor-ON Enabling signal.	Please contact DENSO WAVE service with error number and error message.
85492101	660A	Emergency-stop circuit failure 1d	5	Emergency-stop signal is turned ON but the Safety I/O recognizes the signal is OFF.	Please contact DENSO WAVE service with error number and error message.
85492102	660A	Emergency-stop circuit failure 2d	5	Emergency-stop signal is turned OFF but the Safety I/O recognizes the signal is ON.	Please contact DENSO WAVE service with error number and error message.
85492111	660A	Internal Emergency-stop circuit failure 1d	5	Internal Emergency-stop signal is turned ON but the Safety I/O recognizes the signal is OFF.	Please contact DENSO WAVE service with error number and error message.
85492112	660A	Internal Emergency-stop circuit failure 2d	5	Internal Emergency-stop signal is turned OFF but the Safety I/O recognizes the signal is ON.	Please contact DENSO WAVE service with error number and error message.
85492121	660A	Deadman switch circuit failure 1d	5	Deadman switch is turned ON but the Safety I/O recognizes the signal is OFF.	Please contact DENSO WAVE service with error number and error message.

Code	RC7 Code	Message	Level	Description	Remedy
85492122	660A	Deadman switch circuit failure 2d	5	Deadman switch is turned OFF but the Safety I/O recognizes the signal is ON.	Please contact DENSO WAVE service with error number and error message.
85492131	660A	Protective-stop circuit failure 1d	5	Protective-stop is turned ON but the Safety I/O recognizes the signal is OFF.	Please contact DENSO WAVE service with error number and error message.
85492132	660A	Protective-stop circuit failure 2d	5	Protective-stop is turned OFF but the Safety I/O recognizes the signal is ON.	Please contact DENSO WAVE service with error number and error message.
85492161	660F	Safety contactor circuit failure (ON1d)	5	Motor-ON signal is turned ON but the Safety contactor is turned OFF.	Please contact DENSO WAVE service with error number and error message.
85492162	660F	Safety contactor circuit failure (ON2d)	5	Motor-ON signal is turned ON but the Safety Contactor-ON signal is turned OFF.	Please contact DENSO WAVE service with error number and error message.
85492163	660F	Safety contactor circuit failure (ON3d)	5	Tried to turn ON the Safety contactor but the Motor-on signal is OFF.	Please contact DENSO WAVE service with error number and error message.
85492171	660F	Safety contactor circuit failure (OFF1d)	5	Motor-ON signal is turned OFF but the Safety contactor is turned ON.	Please contact DENSO WAVE service with error number and error message.
85492172	660F	Safety contactor circuit failure (OFF2d)	5	Motor-ON signal is turned OFF but the Safety Contactor-ON signal is turned ON.	Please contact DENSO WAVE service with error number and error message.
85492173	660F	Safety contactor circuit failure (OFF3d)	5	Tried to turn OFF the Safety contactor but the Motor-ON signal is turned ON.	Please contact DENSO WAVE service with error number and error message.
85480001	2C01	AC input over voltage	5	Power supply CPU detected excessive AC input voltage (root-mean-square value).	Check that AC input is not overvoltage. If the error still occurs, please contact DENSO WAVE service.
85480002	2C02	AC input under voltage	5	Power supply CPU detected AC input voltage drop (root-mean-square value).	Please check the followings. - Check if AC power supply cable connection is correct. - Check that AC input voltage does not drop. If the error still occurs, please contact DENSO WAVE service.
85480003	2C07	Instantaneous blackout detected	5	Power supply CPU detected instantaneous blackout.	Please check the followings. - Check if AC power supply cable connection is correct. - Check that the AC input voltage does not drop. If the error still occurs, please contact DENSO WAVE service.

Code	RC7 Code	Message	Level	Description	Remedy
85480004	2C09	BUS over voltage	5	Power supply CPU detected excessive motor bus voltage on the power electrics mother board.	Please check the followings. - Check if AC input voltage is not excessive. - Check that the robot load ratio does not exceed its limit. If the error still occurs, please contact DENSO WAVE service.
85480104	2C09	BUS over voltage	5	Power supply CPU detected excessive motor bus voltage on the motor power board.	Please check the followings. - Check if AC input voltage is not excessive. - Check that the robot load ratio does not exceed its limit. If the error still occurs, please contact DENSO WAVE service.
85480005	2C0A	BUS under voltage	5	Power supply CPU detected motor bus voltage drop on the power electrics mother board.	Please check the followings. - Check that the AC input voltage does not drop. - Check that the robot load ratio does not exceed its limit. If the error still occurs, please contact DENSO WAVE service.
85480105	2C0A	BUS under voltage	5	Power supply CPU detected motor bus voltage drop on the motor power board.	Please check the followings. - Check that the AC input voltage does not drop. - Check that the robot load ratio does not exceed its limit. If the error still occurs, please contact DENSO WAVE service.
85480006	2C0C	DC-BUS over voltage	5	Power supply CPU detected excessive DC bus voltage on the control power supply board.	Confirm the AC input voltage is not excessive. If the error still occurs, please contact DENSO WAVE service.
85480007	2C0D	DC-BUS under voltage	5	Power supply CPU detected DC bus voltage drop on the control power supply board.	Please check the followings. - Check that the AC input voltage does not drop. - Check that the power consumption of optional board, I/O and USB does not exceed the limit. If the error still occurs, please contact DENSO WAVE service.

85480008		MotorBUS-FET failure	5	Power supply CPU detected one of the following conditions. - Low-side FET open failure - High-side FET short-circuit failure - Regeneration FET short-circuit failure - Dynamic brake FET short-circuit failure	Please contact DENSO WAVE service.
85480108		MotorBUS-FET failure	5	Power supply CPU detected one of the following conditions. - Low-side FET open failure - High-side FET short-circuit failure	Please contact DENSO WAVE service.
8548000A		Buck-FET short failure	5	Power supply CPU detected low-side FET short-circuit failure on the power electrics mother board.	Please contact DENSO WAVE service.
8548000C	2C26	Regenerative-FET failure	5	Power supply CPU detected regeneration FET open failure on the power electrics mother board.	Please contact DENSO WAVE service.
8548010C	2C26	Regenerative-FET failure	5	Power supply CPU detected regeneration FET open failure on the mother board.	Please contact DENSO WAVE service.
8548000D	2C27	DB-FET failure	5	Power supply CPU detected dynamic brake FET open failure on the power electrics mother board.	Please contact DENSO WAVE service.
8548010D	2C27	DB-FET failure	5	Power supply CPU detected dynamic brake FET open failure on the mother board.	Please contact DENSO WAVE service.
8548000E		DC15V under voltage	5	Power supply CPU detected 15VH voltage drop on the power electrics mother board.	Please contact DENSO WAVE service.
8548000F		DC17V over voltage	5	Power supply CPU detected excessive 17VH voltage on the power electrics mother board.	Please contact DENSO WAVE service.
8548010F		DC17V over voltage	5	Power supply CPU detected excessive 17VH voltage on the power mother board.	Please contact DENSO WAVE service.
85480010		DC17V under voltage	5	Power supply CPU detected 17VH voltage drop on the power electrics mother board.	Please contact DENSO WAVE service.
85480110		DC17V under voltage	5	Power supply CPU detected 17VH voltage drop on the power mother board.	Please contact DENSO WAVE service.
85480011		DC24V under voltage	5	Power supply CPU detected 24VL voltage drop on the power electrics mother board.	Please contact DENSO WAVE service.
85480111		DC24V under voltage	5	Power supply CPU detected 24VL voltage drop on the mother board.	Please contact DENSO WAVE service.

Code	RC7 Code	Message	Level	Description	Remedy
85480012		Regenerative-resistor overheated	5	Power supply CPU detected excessive temperature of regeneration resistor.	Please check the followings. - Check that the robot load ratio does not exceed its limit. - Check that the fan rotation speed does not drop, or filters are not clogged. - Check that controller operation environment temperature is correct. If the error still occurs, please contact DENSO WAVE service.
85480013		Motor Power overheated	5	Power supply CPU detected excessive temperature on the electrics mother board (motor power supply part).	Please check the followings. - Check that the robot load ratio does not exceed its limit. - Check that the fan rotation speed does not drop, or filters are not clogged. - Check that controller operation environment temperature is correct. If the error still occurs, please contact DENSO WAVE service.
85480014		Power supply CPU overheated	5	Power supply CPU detected excessive temperature on the electrics mother board (Power supply CPU part).	Please check the followings. - Check that the fan rotation speed does not drop, or filters are not clogged. - Check that controller operation environment temperature is correct. If the error still occurs, please contact DENSO WAVE service.
85480114		Power supply CPU overheated	5	Power supply CPU detected excessive temperature on the mother board (Power supply CPU part).	Please check the followings. - Check that the fan rotation speed does not drop, or filters are not clogged. - Check that controller operation environment temperature is correct. If the error still occurs, please contact DENSO WAVE service.

Code	RC7 Code	Message	Level	Description	Remedy
85480016		MotorBUS charge voltage failure	5	Power supply CPU detected motor bus charging failure on the electrics mother board when motor power is turned on.	Please check the followings. − Check that AC power supply cable connection is correct. − Check that AC input voltage does not drop. If the error still occurs, please contact DENSO WAVE service.
85480116		MotorBUS charge voltage failure	5	Power supply CPU detected motor bus charging failure on the motor power board when motor power is turned on.	Please check the followings. − Check that AC power supply cable connection is correct. − Check that AC input voltage does not drop. If the error still occurs, please contact DENSO WAVE service.
85480017		AC input out of range	5	Power supply CPU detected out−of−range AC input voltage.	Please check the followings. − Check that AC power supply cable connection is correct. − Check that AC input voltage is in the specified range. If the error still occurs, please contact DENSO WAVE service.
85480018		Contactor timeout	5	Power supply CPU detected safety contactor operation delay.	Please contact DENSO WAVE service.
85480019		MotorBUS overcurrent	5	Power supply CPU detected overcurrent on the electrics mother board.	Please contact DENSO WAVE service.
85480119		MotorBUS overcurrent	5	Power supply CPU detected overcurrent on the motor power board.	Please contact DENSO WAVE service.
8548001A		EEPROM reading of power supply CPU failure	5	Power supply CPU failed to read EEPROM.	Reboot the robot controller. If the error still occurs, please contact DENSO WAVE service.
8548001B		Hardware error was written in EEPROM of power supply CPU	5	Power supply CPU detected step−down FET short−circuit failure on the electrics mother board.	Please contact DENSO WAVE service.
8548001C		MotorBUS relay short failure	5	Power supply CPU detected motor bus relay short−circuit failure on the electrics mother board.	Please contact DENSO WAVE service.
8548001D		Hardware error was detected at the power on	5	Power supply CPU detected FET short−circuit failure on the electrics mother board at the power on.	Please contact DENSO WAVE service.

Code	RC7 Code	Message	Level	Description	Remedy
8548001E		MotorBUS discharge voltage failure	5	Power supply CPU detected motor bus discharge voltage failure on the electrics mother board at the power on.	Please contact DENSO WAVE service.
8548011E		MotorBUS discharge voltage failure	5	Power supply CPU detected motor bus discharge voltage failure on the motor power board at the power on.	Please contact DENSO WAVE service.
8548011F		Hardware error was written in EEPROM of power supply CPU	5	Power supply CPU detected welding of the inrush current prevention relay on the motor power board.	Please contact DENSO WAVE service.
85480120		Power relay failure	5	Power supply CPU detected welding of the power relay on the motor power board at the power on.	Please contact DENSO WAVE service.
85480121		Hardware error was detected at the power on	5	Power supply CPU detected welding of the inrush current prevention relay on the motor power board at the power on.	Please contact DENSO WAVE service.
8548007F		Unexpected power supply error	5	Power supply CPU sends an unexpected error command.	Reboot the robot controller. If the error still occurs, please contact DENSO WAVE service.
84480081		AC bus voltage has not been detected yet.	4	Power supply CPU could not detect AC bus voltage.	Please contact DENSO WAVE service.
84480082		Hardware version error(HV)	4	Power supply CPU detected hardware version error(HV).	Reboot the robot controller. If the error still occurs, please contact DENSO WAVE service.
844800FF		Unexpected power supply warning	4	Power supply CPU sends an unexpected warning command.	Reboot the robot controller. If the error still occurs, please contact DENSO WAVE service.
84403FFF		Unexpected servo error	4	Unexpected error occurred.	Please contact DENSO WAVE service with error number and error message.
85400001		Fatal Error	5	Process stopped due to a fatal error.	Check the cause of the fatal error.
85400002		Servo module error queue overflow	5	Error notice process stopped because too many errors occurred.	Please contact DENSO WAVE service with error number and error message.
85400003	6101	Watchdog timer error	5	CPU load increased and the process has been stopped temporary.	Please contact DENSO WAVE service with error number and error message.
85400004	60FE	Servo module and trajectory generation module version mismatch	5	Servo module and trajectory generation module version is different.	Please contact DENSO WAVE service with error number and error message.
85400005	6607	Servo parameter checksum error	5	Servo parameter is changed by unexpected agent.	Please contact DENSO WAVE service with error number and error message.
84400006	60FE	Servo module and trajectory generation module communication error	4	Communication between servo module and trajectory generation module failed.	Please contact DENSO WAVE service with error number and error message.

Code	RC7 Code	Message	Level	Description	Remedy
83400007		Servo module process aborted	3	Servo module operation suspended.	Please contact DENSO WAVE service with operation that caused the error, error number and error message.
83400008		Servo module process timeout error	3	Servo module operation timeout occurred.	Please contact DENSO WAVE service with operation that caused the error, error number and error message.
83400009		Servo module process failed.	3	Servo module operation failed.	Please contact DENSO WAVE service with operation that caused the error, error number and error message.
8340000A		Access denied in servo module	3	Servo module operation access was denied.	Please confirm that there is no write access to read only area, and no read access to write only area.
8340000B		There are unshown errors.	3	Operation is suspended for error processing.	Please contact DENSO WAVE service with operation that caused the error, error number and error message.
8540000C		FPGA watchdog timer error.	5	FPGA communication stopped.	Please contact DENSO WAVE service with error number and error message.
8540000D		Watchdog timer is disabled.	5	Could not execute the command because watchdog timer is disabled.	Please contact DENSO WAVE service with error number and error message.
8540000E		Communication with Safety I/O unit has stopped.	5	Could not execute the command because communication with safety I/O is stopped.	Please contact DENSO WAVE service with error number and error message.
85400011		You cannot execute a command while servo driver is running	5	Unexpected error. This operation is prohibited while the servo driver is ON.	Please contact DENSO WAVE service with error number and error message.
85400012		You cannot execute a command while servo driver stops	5	Unexpected error. This operation is prohibited while the servo driver is OFF.	Please contact DENSO WAVE service with error number and error message.
81400013	600A	Turn motor power OFF to execute the command.	1	This operation is not available while motor power is ON.	Turn OFF motor.
81400014	6006	Turn motor power ON to execute the command.	1	This operation is not available while motor power is OFF.	Turn ON motor.
81400015	21D3	You cannot execute a command while an error occurs.	1	This operation is not available while error occurs.	Clear error.
81400016	2008	Turn OFF Emergency-stop to execute the command.	1	This operation is not available while Emergency-stop is ON.	Turn OFF Emergency-stop.
81400017	21EC	Press deadman switch to execute the command.	1	This operation is not available while deadman switch is OFF.	Turn ON deadman switch.
81400018	21F3	Turn ON the Enable-auto to execute the command.	1	This operation is not available while Enable-auto is OFF.	Turn ON Enable-auto.

Code	RC7 Code	Message	Level	Description	Remedy
81400019		Turn OFF Protective-stop signal to execute the command.	1	This operation is not available while Protective-stop is ON.	Turn OFF Protective-stop.
8140001A		You cannot execute a command while contactor is OFF	1	This operation is not available while contactor is OFF.	Please contact DENSO WAVE service with error number and error message.
8140001B		Lock the brake to execute the command.	1	This operation is not available while brake is released.	Lock brakes.
8140001C		You cannot execute a command while robot is reducing the speed to stop.	1	This operation is not available while robot is reducing the speed to stop.	Turn OFF motor and try again.
8140001D		You cannot execute a command while motor power is ON.	1	This operation is not available while motor power is turning ON.	Turn ON motor and try again.
8140001E		You cannot execute a command while motor power is OFF.	1	This operation is not available while motor power is turning OFF.	Turn OFF motor and try again.
81400021		Stop servo log recording to execute the command.	1	This operation is not available while servo log is recorded.	Stop servo log recording and try again.
81400022		Start servo log recording to execute the command.	1	This operation is not available while servo log recording is stopped.	Start servo log recording and try again.
83400023		You cannot execute a command while one of the Emergency-stop lines is disconnected.	3	Failed to execute the command because one of the Emergency-stop lines is disconnected.	Turn ON both Emergency-stop lines, and turn OFF again. If the error still occurs, confirm the external Emergency-stop input signal connection.
83400024		You cannot execute a command while one of the deadman switch lines is disconnected.	3	Failed to execute the command because one of the deadman switch lines is disconnected.	Turn OFF deadman switch, and turn ON again. If the error still occurs, replace teach pendant.
83400025		You cannot execute a command while one of the Enable-auto lines is disconnected.	3	Failed to execute the command because one of the Enable-auto lines is disconnected.	Turn OFF both Enable-auto lines, and turn ON again for Auto mode operation. If the error still occurs, confirm the Enable-auto input signal connection.
83400026		You cannot execute a command while one of the Protective-stop lines is disconnected.	3	Failed to execute the command because one of the Protective-stop lines is disconnected.	Turn ON both Protective-stop lines, and turn OFF again for Auto mode operation. If the error still occurs, confirm the Protective-stop input signal connection.
83400041	279E	One of the external Emergency-stop line is disconnected. (1)	3	Emergency-stop input circuit1 is open but the circuit2 is closed.	Check external Emergency-stop input connection. If the error still occurs, please contact DENSO WAVE service with error number and error message.
83400042	279E	One of the external Emergency-stop line is disconnected. (2)	3	Emergency-stop input circuit1 is closed but the circuit2 is open.	Check external Emergency-stop input connection. If the error still occurs, please contact DENSO WAVE service with error number and error message.

Code	RC7 Code	Message	Level	Description	Remedy
84404528		J8:Excessive position error	4	Position error that exceeds the error allowance is detected while the robot is stopped.	Check the the cable between a robot controller and a robot wiring. Disable the excessive position error detection function when the maximum position error setting is changed, or when the motor current limit function is activated.
84404531		J1:Speed command limit over	4	Speed instruction that exceeds the speed limit is detected.	Reduce robot speed.
84404532		J2:Speed command limit over	4	Speed instruction that exceeds the speed limit is detected.	Reduce robot speed.
84404533		J3:Speed command limit over	4	Speed instruction that exceeds the speed limit is detected.	Reduce robot speed.
84404534		J4:Speed command limit over	4	Speed instruction that exceeds the speed limit is detected.	Reduce robot speed.
84404535		J5:Speed command limit over	4	Speed instruction that exceeds the speed limit is detected.	Reduce robot speed.
84404536		J6:Speed command limit over	4	Speed instruction that exceeds the speed limit is detected.	Reduce robot speed.
84404537		J7:Speed command limit over	4	Speed instruction that exceeds the speed limit is detected.	Reduce robot speed.
84404538		J8:Speed command limit over	4	Speed instruction that exceeds the speed limit is detected.	Reduce robot speed.
84404541		J1:Acceleration command limit over	4	Acceleration instruction that exceeds the acceleration limit is detected.	Reduce robot acceleration and decelaration.
84404542		J2:Acceleration command limit over	4	Acceleration instruction that exceeds the acceleration limit is detected.	Reduce robot acceleration and decelaration.
84404543		J3:Acceleration command limit over	4	Acceleration instruction that exceeds the acceleration limit is detected.	Reduce robot acceleration and decelaration.
84404544		J4:Acceleration command limit over	4	Acceleration instruction that exceeds the acceleration limit is detected.	Reduce robot acceleration and decelaration.
84404545		J5:Acceleration command limit over	4	Acceleration instruction that exceeds the acceleration limit is detected.	Reduce robot acceleration and decelaration.
84404546		J6:Acceleration command limit over	4	Acceleration instruction that exceeds the acceleration limit is detected.	Reduce robot acceleration and decelaration.
84404547		J7:Acceleration command limit over	4	Acceleration instruction that exceeds the acceleration limit is detected.	Reduce robot acceleration and decelaration.

Code	RC7 Code	Message	Level	Description	Remedy
84404548		J8:Acceleration command limit over	4	Acceleration instruction that exceeds the acceleration limit is detected.	Reduce robot acceleration and decelaration.
84404551		J1:Motor speed limit over	4	Encoder detected the speed that exceeds the speed limit.	Reduce robot speed.
84404552		J2:Motor speed limit over	4	Encoder detected the speed that exceeds the speed limit.	Reduce robot speed.
84404553		J3:Motor speed limit over	4	Encoder detected the speed that exceeds the speed limit.	Reduce robot speed.
84404554		J4:Motor speed limit over	4	Encoder detected the speed that exceeds the speed limit.	Reduce robot speed.
84404555		J5:Motor speed limit over	4	Encoder detected the speed that exceeds the speed limit.	Reduce robot speed.
84404556		J6:Motor speed limit over	4	Encoder detected the speed that exceeds the speed limit.	Reduce robot speed.
84404557		J7:Motor speed limit over	4	Encoder detected the speed that exceeds the speed limit.	Reduce robot speed.
84404558		J8:Motor speed limit over	4	Encoder detected the speed that exceeds the speed limit.	Reduce robot speed.
84404561		J1:Motor acceleration limit over	4	Encoder detected the acceleration that exceeds the acceleration limit.	Reduce robot acceleration and decelaration.
84404562		J2:Motor acceleration limit over	4	Encoder detected the acceleration that exceeds the acceleration limit.	Reduce robot acceleration and decelaration.
84404563		J3:Motor acceleration limit over	4	Encoder detected the acceleration that exceeds the acceleration limit.	Reduce robot acceleration and decelaration.
84404564		J4:Motor acceleration limit over	4	Encoder detected the acceleration that exceeds the acceleration limit.	Reduce robot acceleration and decelaration.
84404565		J5:Motor acceleration limit over	4	Encoder detected the acceleration that exceeds the acceleration limit.	Reduce robot acceleration and decelaration.
84404566		J6:Motor acceleration limit over	4	Encoder detected the acceleration that exceeds the acceleration limit.	Reduce robot acceleration and decelaration.
84404567		J7:Motor acceleration limit over	4	Encoder detected the acceleration that exceeds the acceleration limit.	Reduce robot acceleration and decelaration.
84404568		J8:Motor acceleration limit over	4	Encoder detected the acceleration that exceeds the acceleration limit.	Reduce robot acceleration and decelaration.
84404571		J1:Motor Overcurrent	4	Motor current that exceeds the current limit is detected.	Reduce robot speed, acceleration and decelaration.

Code	RC7 Code	Message	Level	Description	Remedy
84404572		J2:Motor Overcurrent	4	Motor current that exceeds the current limit is detected.	Reduce robot speed, acceleration and decelaration.
84404573		J3:Motor Overcurrent	4	Motor current that exceeds the current limit is detected.	Reduce robot speed, acceleration and decelaration.
84404574		J4:Motor Overcurrent	4	Motor current that exceeds the current limit is detected.	Reduce robot speed, acceleration and decelaration.
84404575		J5:Motor Overcurrent	4	Motor current that exceeds the current limit is detected.	Reduce robot speed, acceleration and decelaration.
84404576		J6:Motor Overcurrent	4	Motor current that exceeds the current limit is detected.	Reduce robot speed, acceleration and decelaration.
84404577		J7:Motor Overcurrent	4	Motor current that exceeds the current limit is detected.	Reduce robot speed, acceleration and decelaration.
84404578		J8:Motor Overcurrent	4	Motor current that exceeds the current limit is detected.	Reduce robot speed, acceleration and decelaration.
82404581		J1:Arm fall detected while brake is released.	2	Arm-fall was detected while the brake is released.	Hold robot arm to prevent falling while brake is released.
82404582		J2:Arm fall detected while brake is released.	2	Arm-fall was detected while the brake is released.	Hold robot arm to prevent falling while brake is released.
82404583		J3:Arm fall detected while brake is released.	2	Arm-fall was detected while the brake is released.	Hold robot arm to prevent falling while brake is released.
82404584		J4:Arm fall detected while brake is released.	2	Arm-fall was detected while the brake is released.	Hold robot arm to prevent falling while brake is released.
82404585		J5:Arm fall detected while brake is released.	2	Arm-fall was detected while the brake is released.	Hold robot arm to prevent falling while brake is released.
82404586		J6:Arm fall detected while brake is released.	2	Arm-fall was detected while the brake is released.	Hold robot arm to prevent falling while brake is released.
82404587		J7:Arm fall detected while brake is released.	2	Arm-fall was detected while the brake is released.	Hold robot arm to prevent falling while brake is released.
82404588		J8:Arm fall detected while brake is released.	2	Arm-fall was detected while the brake is released.	Hold robot arm to prevent falling while brake is released.
84400600	64FF	Unexpected encoder error	4	Unexpected encoder error occurred.	Please contact DENSO WAVE service with error number and error message.
83400601		Encoder is not initialized	3	This operation is not available before the encoder initialization completed.	Complete encoder initialization and try again.
83400602		Encoder initializing	3	This operation is not available while the encoder initialization is processing	Complete encoder initialization and try again.

Code	RC7 Code	Message	Level	Description	Remedy
83400603		Encoder error occurs	3	This operation is not available when an encoder error occurs.	Clear error and try again.
83400604		Resetting encoder	3	This operation is not available while the encoder reset is processing	Complete encoder reset procedure and try again
83400605		Encoder accessing	3	This operation is not available while accessing encoder.	Complete accessing to encoder and try again.
83400606		Encoder processing timeout	3	Encoder operation timeout occurred.	Please contact DENSO WAVE service with error number and error message.
83400607		Invalid encoder ID	3	Invalid encoder ID was specified.	Check the specified encoder ID.
83400608		Unsupported encoder	3	The encoder connected to this robot does not support this function.	This robot does not support specified function.
84400609	64FD	Encoder EEPROM access failure	4	Failed to access encoder memory area.	Please contact DENSO WAVE service with error number and error message.
8440060A	64FD	Encoder EEPROM invalid address access	4	Tried to access illegal encoder memory address area.	Please contact DENSO WAVE service with error number and error message.
8440060B	64FD	Encoder EEPROM write protected area access	4	Tried to access write protected encoder memory area.	Please contact DENSO WAVE service with error number and error message.
8540060C		Failed to specify encoder format	5	Failed to set encoder communication format.	Please contact DENSO WAVE service with error number and error message.
8540060D		This robot controller does not support the encoder	5	The encoder which does not support this robot controller is connected.	Please contact DENSO WAVE service with error number and error message.
8540060E		Failed to change encoder mode	5	Failed to set encoder communication mode.	Check the encoder wirings and reboot the robot controller. If the error still occurs, please contact DENSO WAVE service with error number and error message.
85400610		Failed to access encoder	5	Failed to access dual arm control slave robot encoder because this robot controller does not support multi-kinematics slave robot encoder.	Update FPGA (Main).
85400611		Failed to set slave robot	5	Failed to set dual arm control slave robot.	Update FPGA (Mecha).
83400681		Encoder-hub data not received	3	Failed to receive data from encoder-hub.	Check the encoder-hub wiring.
83400682		Encoder-hub framing error	3	Failed to communicate with Encoder-hub	Check the encoder-hub wiring.
83400683		Encoder-hub CRC check error	3	Failed to communicate with Encoder-hub	Check the encoder-hub wiring.
83400684		Encoder-hub data transmitting timeout	3	Failed to send data to Encoder-hub.	Check the encoder-hub wiring.
83400685		Encoder-hub invalid received address	3	Failed to communicate with Encoder-hub	Check the encoder-hub wiring.

Code	RC7 Code	Message	Level	Description	Remedy
83400686		Encoder-hub is not connected	3	Failed to communicate Encoder-hub because Encoder-hub is not connected.	Check the encoder-hub wiring.
83400691		Encoder root cable communication error 1	3	Error occurred in the communication cable between a robot controller and an encoder-hub.	Check the encoder root cable and reboot the robot controller. If the error still occurs, please contact DENSO WAVE service with error number and error message.
83400692		Encoder root cable communication error 2	3	Error occurred in the communication cable between a robot controller and an encoder-hub.	Check the encoder root cable and reboot the robot controller. If the error still occurs, please contact DENSO WAVE service with error number and error message.
83400693		Encoder root cable communication error 3	3	Error occurred in the communication cable between a robot controller and an encoder-hub.	Check the encoder root cable and reboot the robot controller. If the error still occurs, please contact DENSO WAVE service with error number and error message.
83400694		Encoder root cable communication error 4	3	Error occurred in the communication cable between a robot controller and an encoder-hub.	Check the encoder root cable and reboot the robot controller. If the error still occurs, please contact DENSO WAVE service with error number and error message.
83400695		Encoder root cable communication error 5	3	Error occurred in the communication cable between a robot controller and an encoder-hub.	Check the encoder root cable and reboot the robot controller. If the error still occurs, please contact DENSO WAVE service with error number and error message.
83400696		Encoder root cable communication error 6	3	Error occurred in the communication cable between a robot controller and an encoder-hub.	Check the encoder root cable and reboot the robot controller. If the error still occurs, please contact DENSO WAVE service with error number and error message.
854006B0		Backup alarm	5	Backup alarm	Replace encoder battery, reset the encoder and perform CALSET. If the error still occurs, please contact DENSO WAVE service with error number and error message.
854006B1		Encoder error	5	Encoder error	Replace encoder battery and perform CALSET. If the error still occurs, please contact DENSO WAVE service with error number and error message.
844006C0		Bit stuffing error	4	Bit stuffing error	Please contact DENSO WAVE service with error number and error message.

Code	RC7 Code	Message	Level	Description	Remedy
844006C1		Bit monitor error	4	Bit monitor error	Please contact DENSO WAVE service with error number and error message.
844006C2		Recv error	4	Recv error	Please contact DENSO WAVE service with error number and error message.
844006C3		Send error	4	Send error	Please contact DENSO WAVE service with error number and error message.
84404601		J1:Unexpected encoder error	4	Unexpected encoder error occurred.	Please contact DENSO WAVE service with error number and error message.
84404602		J2:Unexpected encoder error	4	Unexpected encoder error occurred.	Please contact DENSO WAVE service with error number and error message.
84404603		J3:Unexpected encoder error	4	Unexpected encoder error occurred.	Please contact DENSO WAVE service with error number and error message.
84404604		J4:Unexpected encoder error	4	Unexpected encoder error occurred.	Please contact DENSO WAVE service with error number and error message.
84404605		J5:Unexpected encoder error	4	Unexpected encoder error occurred.	Please contact DENSO WAVE service with error number and error message.
84404606		J6:Unexpected encoder error	4	Unexpected encoder error occurred.	Please contact DENSO WAVE service with error number and error message.
84404607		J7:Unexpected encoder error	4	Unexpected encoder error occurred.	Please contact DENSO WAVE service with error number and error message.
84404608		J8:Unexpected encoder error	4	Unexpected encoder error occurred.	Please contact DENSO WAVE service with error number and error message.
83404611		ID1:Invalid encoder ID	3	Invalid encoder ID was specified.	Check the the specified encoder ID.
83404612		ID2:Invalid encoder ID	3	Invalid encoder ID was specified.	Check the the specified encoder ID.
83404613		ID3:Invalid encoder ID	3	Invalid encoder ID was specified.	Check the the specified encoder ID.
83404614		ID4:Invalid encoder ID	3	Invalid encoder ID was specified.	Check the the specified encoder ID.
83404615		ID5:Invalid encoder ID	3	Invalid encoder ID was specified.	Check the the specified encoder ID.
83404616		ID6:Invalid encoder ID	3	Invalid encoder ID was specified.	Check the the specified encoder ID.
83404617		ID7:Invalid encoder ID	3	Invalid encoder ID was specified.	Check the the specified encoder ID.
83404618		ID8:Invalid encoder ID	3	Invalid encoder ID was specified.	Check the the specified encoder ID.
84404621		J1:Encoder communication error	4	Failed to communicate to encoder.	Check the encoder wirings.
84404622		J2:Encoder communication error	4	Failed to communicate to encoder.	Check the encoder wirings.

Code	RC7 Code	Message	Level	Description	Remedy
844046D1		J1:Encoder data unreceived	4	Failed to receive data from encoder. Either of the following causes can be expected. 1. At the set up of extended joints or MC8, after the axis setting is set to "enable", the encoder ID setting is not performed. 2. Encoder wiring (the encoder cable, encoder root cable, encoder relay cable, the motor and encoder cable and others) is not connected or those connector is not fully inserted.	[Remedy for cause 1] Press the [LOCK] button, and then press [Cancel] button to clear errors. After that, perform the encoder ID setting (Manual ID: 4910). [Remedy for cause 2] (a) "Encoder wiring is not connected" Turn off the robot controller, and then connect the encoder wiring. Before connecting the encoder wiring, if you want to set the parameter, press the [LOCK] button and then press [Cancel] button to clear error. (b) "Encoder wiring is connected" Turn off the robot controller, and then check whether the connector of the encoder wiring is properly inserted.
844046D2		J2:Encoder data unreceived	4	Failed to receive data from encoder. Either of the following causes can be expected. 1. At the set up of extended joints or MC8, after the axis setting is set to "enable", the encoder ID setting is not performed. 2. Encoder wiring (the encoder cable, encoder root cable, encoder relay cable, the motor and encoder cable and others) is not connected or those connector is not fully inserted.	[Remedy for cause 1] Press the [LOCK] button, and then press [Cancel] button to clear errors. After that, perform the encoder ID setting (Manual ID: 4910). [Remedy for cause 2] (a) "Encoder wiring is not connected" Turn off the robot controller, and then connect the encoder wiring. Before connecting the encoder wiring, if you want to set the parameter, press the [LOCK] button and then press [Cancel] button to clear error. (b) "Encoder wiring is connected" Turn off the robot controller, and then check whether the connector of the encoder wiring is properly inserted.

85400801		Previous backup was not completed.	5	Data backup to storage area failed at previous power OFF.	Please contact DENSO WAVE service with error number and error message.
85400802		Data is not restored after backup failure.	5	Data is not restored after backup to storage area failed.	Please contact DENSO WAVE service with error number and error message.
85400803		Storage area access failure.	5	Failed to check the access of storage area.	Please contact DENSO WAVE service with error number and error message.

Code	RC7 Code	Message	Level	Description	Remedy
85400804		Backup data error.	5	Backup data error occurred.	Please contact DENSO WAVE service with error number and error message.
85400805		Data is not restored after backup data error.	5	Data is not restored after backup data error occurred.	Please contact DENSO WAVE service with error number and error message.
85400901		Abnormal voltage was detected in Power output board	5	Abnormal voltage was detected in Power output board	Check the power output board wiring and connection apparatus. Check if the input of connection apparatus in current capacity is within the limits. If error still occurs, please contact DENSO WAVE service with error number and error message.
85400902		Failed to start output voltage from the power output board	5	Failed to start output voltage from the power output board	Please contact DENSO WAVE service with error number and error message.
85400903		Power output board controller fuse blown	5	Power output board controller fuse blown.	Check the power output board wiring and connection apparatus. Check if the input of connection apparatus in current capacity is within the limits. And check brake fuse. If error still occurs, please contact DENSO WAVE service with error number and error message.
85400904		Only one board can be installed.	5	Two or more power output boards are installed.	Install only one board. If error still occurs, please contact DENSO WAVE service with error number and error message.
85400981		Slot1: Power output board 24VA fuse blown	5	Power output board 24VA fuse blown.	Check the power output board wiring and connection apparatus. Check if the input of connection apparatus in current capacity is within the limits. And check power output board fuse. If error still occurs, please contact DENSO WAVE service with error number and error message.
85400982		Slot2: Power output board 24VA fuse blown	5	Power output board 24VA fuse blown.	Check the power output board wiring and connection apparatus. Check if the input of connection apparatus in current capacity is within the limits. And check power output board fuse. If error still occurs, please contact DENSO WAVE service with error number and error message.

Code	RC7 Code	Message	Level	Description	Remedy
85400983		Slot3: Power output board 24VA fuse blown	5	Power output board 24VA fuse blown.	Check the power output board wiring and connection apparatus. Check if the input of connection apparatus in current capacity is within the limits. And check power output board fuse. If error still occurs, please contact DENSO WAVE service with error number and error message.
85400984		Slot4: Power output board 24VA fuse blown	5	Power output board 24VA fuse blown.	Check the power output board wiring and connection apparatus. Check if the input of connection apparatus in current capacity is within the limits. And check power output board fuse. If error still occurs, please contact DENSO WAVE service with error number and error message.
85400991		Slot1: Power output board 24VB fuse blown	5	Power output board 24VB fuse blown.	Check the power output board wiring and connection apparatus. Check if the input of connection apparatus in current capacity is within the limits. And check power output board fuse. If error still occurs, please contact DENSO WAVE service with error number and error message.
85400992		Slot2: Power output board 24VB fuse blown	5	Power output board 24VB fuse blown.	Check the power output board wiring and connection apparatus. Check if the input of connection apparatus in current capacity is within the limits. And check power output board fuse. If error still occurs, please contact DENSO WAVE service with error number and error message.
85400993		Slot3: Power output board 24VB fuse blown	5	Power output board 24VB fuse blown.	Check the power output board wiring and connection apparatus. Check if the input of connection apparatus in current capacity is within the limits. And check power output board fuse. If error still occurs, please contact DENSO WAVE service with error number and error message.

Code	RC7 Code	Message	Level	Description	Remedy
85400994		Slot4: Power output board 24VB fuse blown	5	Power output board 24VB fuse blown.	Check the power output board wiring and connection apparatus. Check if the input of connection apparatus in current capacity is within the limits. And check power output board fuse. If error still occurs, please contact DENSO WAVE service with error number and error message.
854009A1		Slot1: Power output board 12V fuse blown	5	Power output board 12V fuse blown.	Check the power output board wiring and connection apparatus. Check if the input of connection apparatus in current capacity is within the limits. And check power output board fuse. If error still occurs, please contact DENSO WAVE service with error number and error message.
854009A2		Slot2: Power output board 12V fuse blown	5	Power output board 12V fuse blown.	Check the power output board wiring and connection apparatus. Check if the input of connection apparatus in current capacity is within the limits. And check power output board fuse. If error still occurs, please contact DENSO WAVE service with error number and error message.
854009A3		Slot3: Power output board 12V fuse blown	5	Power output board 12V fuse blown.	Check the power output board wiring and connection apparatus. Check if the input of connection apparatus in current capacity is within the limits. And check power output board fuse. If error still occurs, please contact DENSO WAVE service with error number and error message.
854009A4		Slot4: Power output board 12V fuse blown	5	Power output board 12V fuse blown.	Check the power output board wiring and connection apparatus. Check if the input of connection apparatus in current capacity is within the limits. And check power output board fuse. If error still occurs, please contact DENSO WAVE service with error number and error message.

Code	RC7 Code	Message	Level	Description	Remedy
854009B1		Slot1: Power output board 5V fuse blown	5	Power output board 5V fuse blown.	Check the power output board wiring and connection apparatus. Check if the input of connection apparatus in current capacity is within the limits. And check power output board fuse. If error still occurs, please contact DENSO WAVE service with error number and error message.
854009B2		Slot2: Power output board 5V fuse blown	5	Power output board 5V fuse blown.	Check the power output board wiring and connection apparatus. Check if the input of connection apparatus in current capacity is within the limits. And check power output board fuse. If error still occurs, please contact DENSO WAVE service with error number and error message.
854009B3		Slot3: Power output board 5V fuse blown	5	Power output board 5V fuse blown.	Check the power output board wiring and connection apparatus. Check if the input of connection apparatus in current capacity is within the limits. And check power output board fuse. If error still occurs, please contact DENSO WAVE service with error number and error message.
854009B4		Slot4: Power output board 5V fuse blown	5	Power output board 5V fuse blown.	Check the power output board wiring and connection apparatus. Check if the input of connection apparatus in current capacity is within the limits. And check power output board fuse. If error still occurs, please contact DENSO WAVE service with error number and error message.
85400A00		EtherCAT board detected communication error	5	EtherCAT board detected communication error	Confirm that the EtherCAT cable is property connected. After confirmation, reboot the robot controller. If the error still occurs, Please contact DENSO WAVE service with error number and error message.
83400A01		EtherCAT board detects communication error	3	EtherCAT board detects communication error	Confirm that the EtherCAT cable is property connected.

Code	RC7 Code	Message	Level	Description	Remedy
83400A02		EtherCAT communication disconnection	3	EtherCAT communication disconnection has been detected.	Confirm the EtherCAT cable connection.
85400A03		EtherCAT board memory offset error	5	memory offset of EtherCAT board is unexpected.	Please contact DENSO WAVE service with error number and error message.
83400A20		States of EtherCAT is changed from OP when the motor power is ON	3	States of EtherCAT is changed from OP when the motor power is ON.	When you turn ON motor on again, make states of EhterCAT OP.
83400A21		States of EtherCAT is NOT OP	3	You cannot turn motor ON while states of EtherCAT is NOT OP.	Make states of EhterCAT OP.
83400A22		Failed to EtherCAT acyclic communication	3	Timeout is occurred.	Confirm communication is established and execute the operation again. If the error still occurs, Please contact DENSO WAVE service with error number and error message.
84400A23		Enable-auto signal has been turned ON while motor power is ON	4	Enable-auto signal Strobe has been turned ON beyond a certain time. Therefore, system suspended the motion and turned OFF the motor power.	When you turn ON motor on again, turn ON enable-auto.
84400A24		Protective-stop signal has been turned ON while motor power is ON	4	Protective-stop signal has been turned ON beyond a certain time. Therefore, system suspended the motion and turned OFF the motor power.	When you turn ON motor on again, turn OFF protective-stop signal.
84400A25		Failed to synchronization.	4	Output cycle counter of controlword has not been incremented even after a certain time.	Increment the output cycle counter while motor power is ON. Disable slave motion sync option if you don't use output cycle counter.
84400A26		Servo command buffer full	4	Command data transfer internal buffer overflow occurred.	Comfirm communication cycle of EtherCAT matches a setting value. If sync option is enabled, comfirm the output cycle counter is incrementing.
84400A27		Command value communication delay	4	Command data send internal buffer underflow occurred.	Comfirm communication cycle of EtherCAT matches a setting value. If sync option is enabled, comfirm the output cycle counter is incrementing.
83400A28		Failed to EtherCAT acyclic communication	3	Error was reported from the EtherCAT slave device.	Check the input parameter.
84400A29		Failed to EtherCAT cyclic communication	4	Failed to EtherCAT cyclic communication	Please contact DENSO WAVE service with error number and error message.

8320100c		Level 3 error was notified.	3	The following causes are possible.	Please contact DENSO WAVE service with error number and error message.
8420100d		Level 4 error was notified.	4	The following causes are possible.	Please contact DENSO WAVE service with error number and error message.
8520100e		Level 5 error was notified.	5	The following causes are possible. Process has stopped.	Please contact DENSO WAVE service with error number and error message.
8520100f		Driver of a new device is not found.	5	Device driver for the new device is not found.	If unsupported device is connected, remove the device. If not, please contact DENSO WAVE service.
85201010		Unknown USB device has been detected.	5	Unknown USB device has been detected.	If unsupported USB device is connected, remove the device. Alternatively, I can be considered contacts of the connector. If not, please contact DENSO WAVE service.
85201011		Installation of new devices will continue after reboot. Press "OK" and wait until it is fully shut down.	5	Installation of new devices will continue after reboot.　Press "OK" and wait until it is fully shut down.	Press OK to shutdown the controller. Do not turn OFF the controller power before shutdown completion screen appears. If the problem still occurs, hardware malfunction might be possible. Please contact DENSO WAVE service.
85201012		The interrupt process was delayed.	5	CPU load increased and the interrupt process was delayed.	Please contact DENSO WAVE service with error number and error message.
80201013		Level 0 error was notified.	0	The following causes are possible.	Please contact DENSO WAVE service with error number and error message.
83201081		Invalid configuration data	3	Configuration data error is found during the data setting.	Please contact DENSO WAVE service with error number and error message.
83201082	60D2	Invalid motion optimization parameter	3	Invalid configuration data for payload, center of gravity or inertia.	The setting parameter might be out of range. Please revise the setting value.
85201083		Invalid configuration record count	5	An error is found for the database that stores system startup parameters.	Project data of wrong version might be sent to the controller. Recreate project data with WINCAPSIII.
85201084		Invalid common configuration record count	5	An error is found for the database that stores system startup parameters.	Wrong version project data might be sent to the controller. Recreate project data with WINCAPSIII.
85201085		Invalid database file path	5	Unexpected error. Data file path you referred is invalid.	Please contact DENSO WAVE service with error number and error message.
85201086		DataBase open error	5	An error is found for the database that stores system startup parameters.	Current project file might be damaged. Backup the project data and then contact DENSO WAVE service.
83201087		Invalid configuration table	3	Unexpected error. Referred parameter area is out of system parameter range.	Please contact DENSO WAVE service with error number and error message.

Code	RC7 Code	Message	Level	Description	Remedy
83201088		Configuration data check is not implemented	3	Unexpected error. System parameter pre-check is not functioning.	Please contact DENSO WAVE service with error number and error message.
83201089		Invalid configuration index	3	Unexpected error. Referred parameter area is out of system parameter range.	Please contact DENSO WAVE service with error number and error message.
8520108a		Invalid database connection	5	Unexpected error. Failed to connect to database.	Please contact DENSO WAVE service with error number and error message.
8520108b		Configuration record count is not identical with the common configuration record count	5	An error was found for the database that stores system startup parameters.	Project data of wrong version might be sent to the controller. Recreate project data with WINCAPSIII.
8520108c		Memory allocation error	5	Unexpected error. Failed to allocate memory for system parameter.	Please contact DENSO WAVE service with error number and error message.
8320108d		Invalid software motion limit parameter	3	Software motion limit setting is invalid.	Positive side software limit value might be smaller than that of the negative side. Please revise the value.
8520108e		Database validity check is failed	5	Inconsistency is found on the parameter in the database.	Project data of wrong version might be sent to the controller. Recreate project data with WINCAPSIII. If the problem still occurs, project data might be damaged. Backup the project data and then contact DENSO WAVE service.
8320108F		Invalid motor type.	3	Invalid motor type.	Please revise the motor type.
83201091		Specified configuration data is out of range.	3	The value you entered for the system parameter is out-of-range.	Please contact DENSO WAVE service with error number and error message.
83201092		Failed to reload configuration data.	3	Unexpected error. Failed to reload system parameter.	Please contact DENSO WAVE service with error number and error message.
83201093		Invalid motor parameter.	3	An error is found on the database that stores motor parameters.	Project data with wrong motor parameters might be sent to the controller. Recreate project data with WINCAPSIII.
83201094		Cannot use RC7 compatible type robot model parameter.	3	Falied to use RC7-compatible robot model parameters because RC7-compatible robot model parameter is not prepared.	If RC7-compatible parameter is not prepared, standard robot parameter is assigned as RC7-compatible robot model parameter. In this case, turn OFF the robot model parameter RC7-compatible mode.
83201095		Disable extended-joints property.	3	Invalid extended-joints setting.	You can't activate the extended-joint. Motor type for the extended-joint might be unspecified. Revise the extended-joints setting.

Code	RC7 Code	Message	Level	Description	Remedy
83201096		Invalid force sensor payload parameter	3	Invalid configuration data for force sensor payload, center of gravity or inertia.	The setting mass parameter might be beyond limit for Mass of PayLoad. Please revise the setting value.
83201101		Invalid I/O device	3	Unexpected error. I/O device you tried to access is not exist.	Please contact DENSO WAVE service with error number and error message.
83201102		Specified I/O is not output device	3	Unexpected error. I/O that you tried to output is not the output I/O area.	Please contact DENSO WAVE service with error number and error message.
83201103		Invalid I/O watch number	3	Unexpected error. I/O number you tried to check the state is out-of-range.	Please contact DENSO WAVE service with error number and error message.
83201104		Invalid I/O device	3	Unexpected error. This I/O device is not supported.	Please contact DENSO WAVE service with error number and error message.
83201105		Invalid I/O number	3	Unexpected error. Tried to refer out-of-range I/O number.	Please contact DENSO WAVE service with error number and error message.
85201106		Memory allocation error	5	Unexpected error. Failed to allocate memory at the I/O device initialization.	Please contact DENSO WAVE service with error number and error message.
83201201		Specified controller parameter is invalid	3	Unexpected error. System tried to refer non-implemented parameter.	Please contact DENSO WAVE service with error number and error message.
83201202		Invalid External speed	3	The value you set for the external speed is out-of-range.	Setting value range is 0.1-100. Revise the setting value.
83201203		Invalid External acceleration	3	The value you set for the external acceleration is out-of-range.	Setting value range is 0.0001-100. Revise the setting value.
83201204		Invalid External deceleration	3	The value you set for the external deceleration is out-of-range.	Setting value range is 0.0001-100.0. Revise the setting value.
83201205		Speed conversion type is invalid	3	Unexpected error. Specified speed conversion mode is not supported.	Please contact DENSO WAVE service with error number and error message.
82201206		Motion speed optimazation setting failed	2	Motion speed optimization setting change is aborted because system parameter error was found.	Please contact DENSO WAVE service with error number and error message.
82201207		Failed to change motion speed optimization setting	2	You cannot change the motion speed optimization setting while the robot is moving or suspended.	Wait until robot motion is stopped, and then try again. If program is suspended, reset the program and try again.
81201208		Invalid DETECT command position size	1	Unexpected error. The stored data type obtained by Detect command is invalid.	Please contact DENSO WAVE service with error number and error message.
81201209		Invalid DETECT command I/O number	1	Unexpected error. The I/O number monitored by Detect command contains invalid value.	Please contact DENSO WAVE service with error number and error message.

Code	RC7 Code	Message	Level	Description	Remedy
8120120a		Invalid DETECT command position index	1	Unexpected error. The index number that stores detection start position of Detect command is invalid.	Please contact DENSO WAVE service with error number and error message.
8520120b		Robot controller specifications error	5	Standard type project is used for Safety-I/O-less type robot controller.	Send safety-I/O-less type project from WINCAPSIII.
8520120c		Operation was denied because initialization was failed	5	Internal processing was aborted because the fatal error occurred.	Confirm the cause of fatal error.
8220120d		Accel Mode is invalid	2	Specified acceleration mode is not exist.	Confirm the acceleration mode index.
8520120e		Robot controller specifications error	5	Safety-I/O-less type project is used for standard type robot controllers.	Send standard type project data from WINCAPSIII.
8220120f		You cannot change the operation mode while the arm is moving.	2	Operation mode change is not allowed while the robot is moving.	Wait until robot motion is fully stopped, and then try again.
81201211		MotionSkip Mode is invalid	1	Specified MotionSkip mode is not exist.	Confirm the MotionSkip mode.
81201212		Specified I/O number is currently locked by the system, and cannot use at DETECT command.	1	Specified I/O number is currently locked by the system. This I/O number cannot be used by Detect command.	Please use different I/O number.
81201213		I/O state is not changed.	1	I/O state has not changed.	Revise the I/O setting.

832012a0	24b5	TCP is interfering with Area31	3	Tool center point interferes with area 31.	Check if the tool center point is placed in the expected position.
832012f8		Area enable/disable setting is invalid.	3	Specified value can not change the area monitoring status.	Revise the area setting.
832012f9		Area monitoring is disabled.	3	Area setting is invalid due to the invalid area settings.	Failed to enable area monitoring. Revise the area setting.
832012fa		The number of Area monitoring exceeds the upper limit.	3	Tried to enable Area monitoring more than the upper limit.	Failed to enable area monitoring. Revise the area setting. The maximum number of area monitoring differs depending on each monitoring interval. Set the number of area monitoring less than or equal to the maximum monitoring number for the monitoring interval.
832012fb		Error check condition is invalid	3	Specified value is out-of error detection setting range.	Confirm error detection range setting.
832012fc		Area number is invalid	3	Specified area number does not exist.	Confirm area number index setting.
832012fd		Monitoring cycle is invalid	3	Area monitoring is not possible with the specified monitoring cycle.	Confirm area monitoring cycle setting. The monitoring cycle needs to correspond with that of different areas.
832012fe		Posture check range is invalid	3	Specified value is out of possible pose detection range.	Confirm pose detection range setting.
832012ff		Axis angle check range is invalid	3	Specified value is out of possible axis detection range.	Confirm joint detection range setting.
83201301		Failed to take arm	3	Unexpected error. Failed to take arm semaphore.	Please contact DENSO WAVE service with error number and error message.
85201302		Operation was aborted because initialization is failed	5	Internal processing was aborted because the fatal error occurred.	Confirm the cause of fatal error.
83201381		Invalid Rotate plane type	3	Unexpected error. Invalid rotation plane was specified at ROTATE command execution.	Please contact DENSO WAVE service with error number and error message.

Code	RC7 Code	Message	Level	Description	Remedy
83201382		Invalid Internal speed	3	Out-of-range value was set for the internal speed.	Value range is 0.1 – 100. Revise the value.
83201383		Invalid internal acceleration	3	Out-of-range value was set for the internal acceleration.	Value range is 0.0001 – 100. Revise the value.
83201384		Invalid internal deceleration	3	Out-of-range value was set for the internal deceleration.	Value range is 0.0001 – 100. Revise the value.
83201385		Invalid internal joint speed	3	Out-of-range value was set for the internal joint speed.	Value range is 0.1 – 100. Revise the value.
83201386		Invalid internal joint acceleration	3	Out-of-range value was set for the internal joint acceleration.	Value range is 0.0001 – 100. Revise the value.
83201387		Invalid internal joint deceleration	3	Out-of-range value was set for the internal joint deceleration.	Value range is 0.0001 – 100. Revise the value.
83201388		Invalid Achievement level	3	Achievement level for Arrive command is out of range.	Value range is 0 – 100 (0 is not allowed). Revise the value.
83201389		Invalid Arch start length	3	Arch start position value for ArchMove command is out of range.	Value range is from 0 to the arch height. Revise the value.
8020138a		Switch linear interpolation because the circular trajectory cannot be generated.	0	If circular trajectory cannot be calculated from its teaching points (for example, if start point, passing point and end point is on the same line), motion calculation is switched to a simple linear motion from start point to end point.	If the linear motion is different from the motion you have expected, revise the Pass point and End point.
8020138b		Switch linear interpolation because spline interpolation cannot be generated.	0	If invalid pass point is specified for spline interpolation motion, motion calculation is switched to a simple linear motion from start point to end point.	If the linear motion is different from the motion you have expected, revise the Pass point.
8520138c		Operation was aborted because initialization is failed	5	Internal processing is aborted because the fatal error occurred.	Confirm the cause of fatal error.
8320138d		Circular trajectory cannot be generated	3	The circular trajectory is linear motion not to pass passing point because start point, passing point and end point is on the same line and passing point is not between start point and end point.	Revise the pass point and end point.
8020138e		Spline interpolation motion was completed.	0	Spline interpolation motion was completed.	Spline interpolation motion was completed.

Code	RC7 Code	Message	Level	Description	Remedy
83201401	607F	Destination position figure is inconsist with the current figure.	3	Destination position figure is inconsist with the current figure.	The robot cannot move to the destination position with Fig setting different from the starting point, because the robot pose needs to change rapidly in the middle of the motion. Please change the Fig setting of the starting point or the destination point.
83201402		Motion buffer overflow	3	Unexpected error. System motion buffer overflow occurred.	Please contact DENSO WAVE service with error number and error message.
81201403		Cannot move within the specified motion time	1	Robot cannot move because specified motion time is shorter than the minimum required time for the motion.	Specify longer motion time.
83201404	73FF	Robot stops the motion	3	This operation is not available during the robot stop process.	Operate after the robot completely stopped.
83201405		Command position is invalid	3	Unexpected error. The process was stopped because invalid motion instruction has been generated.	Please contact DENSO WAVE service with error number and error message.
83201406		Specified motion parameter is invalid	3	Unexpected error. System tried to refer to an undefined parameter.	Please contact DENSO WAVE service with error number and error message.
81201407		Specified TCP speed setting is not implemented.	1	Unexpected error. The specified TCP speed setting value is not implemented.	Please contact DENSO WAVE service with error number and error message.
81201408		Move option is invalid	1	Invalid value was set for the motion command option argument.	Check the option argument of the motion command.
83201409		This motion is prohibited in the current setting.	3	Unexpected error. Tried to issue motion command with invalid setting.	Please contact DENSO WAVE service with error number and error message.
8420140a		Referred motion is invalid	4	Unexpected error. Tried to refer to non-existing motion object.	Please contact DENSO WAVE service with error number and error message.
8320140b		Path point is invalid.	3	Robot arm cannot reach path points on the trajectory.	Check if the specified pass point is reachable for the robot.
8520140c		Memory allocation error.	5	Unexpected error. Failed to allocate memory for motion object when system initialization.	Please contact DENSO WAVE service with error number and error message.
8120140d		Specified path number is invalid.	1	Path number you have set is out-of-range.	The setting range is 1-20. Check the setting.
8120140e		Specified path is empty.	1	No motion point on the trajectory is specified.	Specify at least one Path point.
8020140f		Motions other than robot joints were set to Pass motion, because specified pass start displacement is invalid.	0	If pass start displacement is specified for other than robot axes, it will be ignored. In this case, Pass motion is set automatically.	Pass start displacement setting for the joints other than robot axis is ignored, and changed to pass motion.

Code	RC7 Code	Message	Level	Description	Remedy
83201411		Specified interpolation is invalid	3	Unexpected error. The trajectory cannot be generated at offline with the specified interpolation.	Please contact DENSO WAVE service with error number and error message.
83201412		Stopped position and restart position is different.	3	Because of the great difference between the Suspended-stop position and the Continue-start position, the restart is stopped for safety. This situation might occur if the robot is manually moved after the Suspend-stop, and then changed to the Auto mode again, and then the Continue-start is executed.	Error threshold can be changed by changing the allowance for position gap detection.
83201413		Specified path is locked	3	The specified number's trajectory is currently locked by the system, therefore you cannot operate or change it.	Change or operate after robot motion is completed.
84201414		TCP command speed limit over	4	The system tried to reduce TCP speed in accordance with the safety standard ISO10218-1, but the speed still exceeds the limit. Therefore, system suspended the motion and turned OFF the motor power.	Reduce the speed because automatic speed reduction function cannot reduce the speed to the required level.
84201415		TCP command speed limit over	4	The system tried to reduce TCP speed in accordance with the safety standard ISO10218-1, but the speed still exceeds the limit. Therefore, system suspended the motion and turned OFF the motor power.	Reduce the speed because automatic speed reduction function cannot reduce the speed to the required level.
84201416		Failed to synchronize the Motion time	4	Unexpected error. An error occurred in the motion time synchronization process.	Please contact DENSO WAVE service with error number and error message.
81201417		Specified path point number is invalid	1	Pass point number setting is incorrect.	The setting range is from 1 to [pass point registered number]. Revise the setting.
80201418		The path is close to the singular point.	0	The robot is traveling the vicinity of the singular point. Robot speed might change suddenly.	If there is a problem, enable singular point avoidance function, or revise the motion destination position or the interpolation method.
82201419		Specified path is protected	2	Because the specified trajectory number is currently protected by the system, it cannot be operated or changed.	Change or operate after changing protect setting.
8320141a		TCP position check motion timeout.	3	TCP did not reach the target position within the time limit.	The robot arm might be vibrating. Revise the motion speed and the settling time.
8220141b		Path point count exceeds the upper limit.	2	Exceeded the maximum registration count of pass point.	You cannot register no more path point. Revise the setting.

Code	RC7 Code	Message	Level	Description	Remedy
8220141c		Specified path is not generated.	2	Unexpected error occurred. Trajectory for the specified number has not been generated yet.	Please contact DENSO WAVE service with error number and error message.
8120141d		The path needs to be divided.	1	Path points include invalid point pair where the position (X,Y,Z) is same but the posture(RX,RY,RZ) is different.	Please divide path at the vicinity of the invalid point pair.
8120141e		Tracking canceled	1	Tracking motion is terminated	Execute the robot motion command again.
8420141f		Motion time gap occuured.	4	Unexpected error occurred. An error occurred in the motion time synchronization process.	Please contact DENSO WAVE service with error number and error message.
80201421		Set the pass start displacement distance again.	0	If the value designated with @"numeric value" exceeds the half of the travel distance, the deceleration start position is fixed to the middle point of the travel distance.	Set pass start displacement distance again.
81201422		The robot cannot catch up with the work.	1	The issued command was cancelled because it is impossible to catch up with the workpiece.	Revise the setting. Revise the start position and the motion speed of the robot motion. Or, reduce the conveyor's speed.
81201423		Lower tracking limit over.	1	The robot stopped tracking the workpiece because it passed the lower limit.	Change the lower limt of tracking range by TrackStartArea, or set the additional argument of TrackStart
81201424		Upper tracking limit is out of robot motion range.	1	The upper tracking limit is out of the robot motion range	Change the upper limt of tracking range by TrackStartArea.
81201425		Lower tracking limit is out of robot motion range.	1	The lower tracking limit is out of the robot motion range	Change the lower limt of tracking range by TrackStartArea.
80201426		You cannot exectue with Pass-motion	0	This operation is not allowed while Pass-motion.	Complete the Pass-motion and then try again.
80201427		MotionSkip Mode was changed.	0	The specified MotionSkip Mode is currently forbid by the system.	Revise the setting.
83201428		Failed to optimal speed control.	3	Unexpected error. An error occurred in the optimal speed control process.	Please contact DENSO WAVE service with error number and error message.
81201429		Disconnect to master robot	1	Disconnect to master robot	Please revise network condition

Code	RC7 Code	Message	Level	Description	Remedy
8220142a		First path point is different from current position.	2	Spline interpolation motion cannot work because its first path point is different from current position.	Please revise any of the following setting. - Please disable configuration of the "Use a start point in spline curve". - Please add current position to beginning of the path. - Please revise the first path point in current position. - Please carry it out after moving to position of the first path point. (You can acquire position of the path point in GetPathPoint.)
8220142b		Spline interpolation cannot be generated because there is too few path points.	2	Valid pass points are necessary more than three points in the spline interpolation motion.	Revise the pass point.
8320142c		Entered the Exclusive area during Tracking Motin	3	Interrupt Tracking Motion because of entering the exclussive area during Tracking Motion	Revise the exclusive area
8320142d		Deceling by Safety Function during Tracking Motin	3	Interrupt Tracking Motion because of deceling by Safety Function during Tracking Motion	Revise the Safety Function
8320142e		TCP current speed limit over	3	The system tried to reduce TCP speed in accordance with the safety standard ISO10218-1, but the speed still exceeds the limit. Therefore, system suspended the motion and turned OFF the motor power.	Reduce the speed because automatic speed reduction function cannot reduce the speed to the required level.
8320142f		Option Setting for TrackStart is incorrect	3	You cannot enable Error setting option and Skip option at the same time	Revise the TrackStart Option setting
83201430		Failed to generate path by optimal speed control.	3	The specifued move can not be performed with current setting.	Revise the robot motion.
83201431		Path point is spline interpolation cannot be generated.	3	Robot arm cannot be calculated path points on the trajectory.	Check if the specified pass point is reachable for the robot.
83201481		Slave controller is not set to the Slave mode	3	Slave controller is not set to the Slave mode	Check the setting of the slave controller.
84201482		Position command buffer is empty	4	Position command was not generated for a certain period of time.	If the system is set to the Slave mode, check that the position command is correctly sent from the master side.
83201483		Position command buffer overflow	3	Command buffer overflowed because too many commands were generated in a short period of time.	If the system is set to the Slave mode, check that the position command is correctly sent from the master side.
83201484		Slave controller is not set to the Auto mode	3	Slave mode is available only in the Auto mode operation.	Change the slave controller to the Auto mode, and then try again.

Code	RC7 Code	Message	Level	Description	Remedy
85201485		Memory allocation error	5	Unexpected error. Failed to allocate memory when the buffer size of position command was changed.	Please contact DENSO WAVE service with error number and error message.
84201486		Command position generation is stopped	4	Process was aborted because no more position commands can be generated due to error occurrence. All joints were immediately suspended and motor power was turned OFF.	Confirm the cause of previous error. If the system is set to the Slave mode, check that the position command is correctly sent from the master side.
83201501	607A	Destination position is out of robot motion range	3	The robot tried to exit the motion range. All joint motions were suspended and motor power was turned OFF.	The robot cannot move to this direction anymore. Operate the robot to the opposite direction.
82201502	607A	Destination position is out of robot motion range	2	Manually controlled robot tried to exit the motion range. All joint motions were suspended.	The robot cannot move to this direction anymore. Operate the robot to the opposite direction.
81201503	607A	Destination position is out of robot motion range	1	Transformation failed because input pose was out of motion range. The error occurs when executing T2J(),P2J() or T2P().	Specify a pose that can be transformed.
83201504	607D	Motion is stopped because the path is too close to the singular point	3	All joint motion has been suspended and the motor power turned OFF. The trajectory to the destination TCP position or figure includes the vicinity of the singular point which might cause the abrupt motion of each joint.	The robot cannot move to this direction anymore. Enable singular point avoidance function, or revise the motion destination position or the interpolation method.
82201505	607D	Motion is stopped because the path is too close to the singular point	2	All joint motion has been suspended. The trajectory to the destination TCP position or figure includes the vicinity of the singular point which might cause the abrupt motion of each joint.	The robot cannot move to this direction anymore. Enable singular point avoidance function, or revise the motion destination position or the interpolation method.
81201506	607D	Motion is stopped because the path is too close to the singular point	1	All transformation have been suspended. The trajectory to the specified position or figure includes the vicinity of the singular point which might cause the abrupt motion of each joint. The error occurs when executing T2J(),P2J() or T2P().	Specify a pose that can be transformed.
83201507		Specified robot parameter is invalid	3	Unexpected error. System tried to refer to non-implemented parameter.	Please contact DENSO WAVE service with error number and error message.
83201508		Failed to convert the robot posture	3	Unexpected error. An error occurred when the robot posture was transferred to commands, such as T2J() and P2J().	Please contact DENSO WAVE service with error number and error message.
82201509		Axis number is invalid	2	Specified joint number is out of range.	Confirm the specified joint number value.

Code	RC7 Code	Message	Level	Description	Remedy
8520150a	600E	Unsupported robot type	5	Unsupported robot type is specified.	Please contact DENSO WAVE service with error number, error message and the version of the robot controller.
8520150b		Failed to allocate memory for robot objects	5	Unexpected error. Failed to allocate memory at the initialization.	Please contact DENSO WAVE service with error number and error message.
8520150c		Failed to allocate memory for extended-joint objects	5	Unexpected error. Failed to allocate memory at the initialization.	Please contact DENSO WAVE service with error number and error message.
8320150d		You cannot enable gravity compensation	3	Gravity compensation is not available in the current setting.	Revise the setting.
8320150e		You cannot disable gravity compensation	3	You cannot disable the gravity compensation in the current setting.	Revise the setting.
8320150f		You cannot enable current limitation	3	Current limitation is not available in the current setting.	Revise the setting.
83201510		You cannot disable current limitation	3	You cannot disable the Current limitation in the current setting.	Revise the setting.
83201511		You cannot set the allowable deviation of the axis	3	You cannot change the Error allowance in the current setting.	Revise the setting.
83201512		You cannot release servo lock	3	Servo unlock is not available in the current setting.	Revise the setting.
85201513		Operation was aborted because initialization is failed	5	Internal process is suspended because fatal error occurred.	Confirm the cause of fatal error.
85201514		Invalid speed setting or acceleration setting	5	Unexpected error. Abnormal parameter setting was found in the initialization of Speed/Accel .	Please contact DENSO WAVE service with error number and error message.
83201517		Enable gravity compensation	3	This operation requires the gravity compensation-enabled.	Enable the gravity compensation, and then try again.
83201518		Invalid motor current limit is set	3	Current limit setting is out of range.	Confirm the specified current limit setting.
81201519		Specified robot fig is invalid	1	Invalid robot Fig was specified.	Confirm the specified robot Fig.
8320151a		You cannot set the allowable positioning error	3	You cannot set the Error allowance in the current setting.	Revise the setting.
8320151b		You cannot set the motion finish timeout value	3	Motion finish timeout cannot be set in the current setting.	Revise the setting.
8420151c		Command position transmission is stopped	4	Command position transfer was stopped because an abnormal command position was found. All joint motions were suspended and the motor power was turned OFF.	Please contact DENSO WAVE service with error number and error message.
8120151d		RobotName Parameter is invalid	1	Parameter for acquiring robot name is out of range.	Check the parameter for the robot name acquisition.

Code	RC7 Code	Message	Level	Description	Remedy
8320151e		Robot arm interference error	3	All joint motions were suspended and motor power was turned OFF. The trajectory to the destination TCP position or figure interferes with the robot arm.	The robot cannot move to this direction anymore. Operate the robot to the opposite direction.
8220151f		Robot arm interference error	2	All joint motions are suspended, because the robot arm interferes in the motion to the destination position.	The robot cannot move to this direction anymore. Operate the robot to the opposite direction.
83201521		You cannot set Arm property	3	You cannot enable/disable arm in the current setting.	Revise the setting.
83201522		You cannot set gravity offset	3	Gravity compensation is not available in the current setting.	Revise the setting.
83201523		You cannot execute CalReady	3	CalReady is not available in the current setting. The following possible causes are likely: 1. The robot type does not support CalReady. 2. Invalid CalReady execution order. 3. Invalid CalReady number.	Take the following action according to the possible causes. 1. Confirm the robot type supports CalReady. 2. Confirm the execution order of CalReady is correct. 3. Confirm executable number is specified for CalReady.
83201524		You cannot execute a command in this robot type	3	This robot type does not support the operation.	Check if the robot type supports the operation.
83201525		Destination posture cannot be realized with this robot type.	3	The robot tried to move to the unrealizable posture. All joint motions were suspended and motor power was turned OFF.	Take following action according to the destination pose type. 1. Set Rx = 180[deg] Ry = 0[deg] in type P 2. Set approach vector at V(0, 0, −1) in type T
83201526		Invalid Z−axis force limit value	3	Z−axis force limit setting is out of range.	Confirm the specified Z−axis force limit setting.
83201527		You cannot enable Z−axis force limitation	3	Cannot enable Z−axis force limitation in the current setting.	Revise the setting.
83201528		You cannot disable Z−axis force limitation	3	Cannot disable Z−axis force limitation in the current setting.	Revise the setting.
83201529		You cannot lock servo	3	Servo lock is not available in this setting.	Revise the setting.
8320152A		You cannot enable PWM control	3	Cannot enable PWM control in the current setting.	Revise the setting.
8320152B		You cannot disable PWM control	3	Cannot disable PWM control in the current setting.	Revise the setting.
8320152C		You cannot enable force control	3	Cannot enable force control in the current setting.	Revise the setting.
8320152D		You cannot disable force control	3	Cannot disable force control in the current setting.	Revise the setting.
8320152E		Excessive position error in force control	3	TCP position exceeded the deviation limit while Force control is ON.	Revise the setting of TCP deviation allowable value.

Code	RC7 Code	Message	Level	Description	Remedy
8320152F		Force limit over in force control	3	Control force exceeded the limit while the force control is ON.	Revise the setting.
83201530		Speed limit over in force control.	3	TCP exceeded the speed limit while force control is ON.	Reduce the speed.
83201531		You cannot perform PTP motion while in force control mode.	3	Tried to perform PTP motion while force control is ON.	Revise the program so as not to move the robot with PTP motion under the force control.
83201532		Force control parameter error.	3	Tried to set invalid value to force control parameter.	Revise the setting of the force control parameter. Please check whether there is any out-of-range parameter .
83201533		You cannot resume motion while in force control mode.	3	Tried to resume motion from halt state while force control is ON.	Revise the program so as not to suspend the robot motion under the force control.
82201534		Specified axis is not the boundless rotation axis	2	This operation is available only for the boundless rotation axis.	Confirm the specified joint number. Check if the specified joint is set to the boundless rotation. If not, set the joint to the boundless rotation from the joint setting window.
83201535		You cannot set control parameter while in force control mode.	3	Tried to set control parameter while force control is ON.	Revise the program so as not to set the force control parameter while the force control is enabled.
81201536		Collision detection parameter error	1	Tried to set invalid value to collision detection parameter.	Revise the setting of the collision detection parameter.
83201537		Commond is not executable with robot joints	3	This operation is not available for the robot joint.	Reconfirm the setting.
83201538		Commond is not executable with sliding joints	3	This operation is not available for the sliding joints.	Reconfirm the setting.
83201539		You cannot execute this operation while force control is enabled	3	This operation is not available while the force limit is ON.	Disable the force control and the try again.
8320153A		Invalid force control coordinate system.	3	This coordinate system is not available in the Force control.	Revise the coordinate system.
8320153B		Invalid force control mode.	3	This control mode is not available in the Force control.	Revise the control mode.
8320153C		Invalid force control number.	3	This control number is not available in the Force control.	Revise the force control number.
8320153D		You cannot set "0" for Inertia and damping parameter.	3	Tried to set zero value for inertia or damping parameter.	Revise the inertia, or damping parameter.

Code	RC7 Code	Message	Level	Description	Remedy
8320153E		You cannot control inertia, damping and compliance parameters.	3	You cannot control inertia, damping and compliance parameters.	Please increase the damping parameter. Or, please reduce the inertia, or compliance parameters.
8320153F		You cannot calculate inertia, damping and compliance parameters.	3	You cannot calculate inertia, damping and compliance parameters.	Please reduce the damping parameter. Or, please increase the inertia, or compliance parameters.
83201540		Invalid license(Force Sensor Compliance Control)	3	Tried to use a function without a force sensor compliance control license.	Please register a license, when it already has a license. Please contact DENSO WAVE service, when you do not have a license.
83201541		Failed to communicate to Force sensor.	3	Failed to communicate with a Force sensor	Please check connection of a force sensor and a controller.
83201542		Force sensor data error	3	The force sensor data was not updated during the force control operation.	Please check connection between a force sensor and a controller. Avoid electric noise by placing the noise source away.
83201543		Failed to connect to Force sensor.	3	Failed to communicate with a Force sensor	Check the connection with the force sensor
83201544		Force sensor is not available in this system.	3	You cannot use Force sensor in this system because of the current Force sensor's configuration.	Please enable configuration of the "Force sensor status". [F2 Arm] – [F6 Aux] – [F1 Config] – [152 Force sensor status]
83201545		Force control is disabled	3	Force control was finished because the operation was stopped during the force control..	Stop processing was executed during force control . Please disable the force control before the stop processing . Move the robot to the safe place, and then enable the force control again.
83201546		Force control data argument is invalid	3	Invalid value is set to the force control data argument.	Check the argument of the force control data acquision.
84201547		Command position generation error	4	Unexpected command speed was detected. All joints have Emergency–stopped and motor power was turned OFF for safety reason.	Please contact DENSO WAVE service with the error number and the error message.
80201548		Command position generation error	0	Unexpected command speed was detected.	Please contact DENSO WAVE service with the error number and the error message.
80201549		Failed to communicate to force sensor	0	Failed to communicate with a Force sensor	Check the connection between the force sensor and the controller.

Code	RC7 Code	Message	Level	Description	Remedy
8020154A		Force sensor communication is disconnected	0	Disconnected from Force sensor.	Check the connection between the force sensor and the controller.
8020154B		Force sensor packet error	0	Received invalid force sensor communication packet.	Check the connection between the force sensor and the controller. Avoid electric noise by placing the noise source away.
8020154C		Force sensor data reception timeout	0	Failed to receive data from Force sensor within predetermined time.	Connection between the force sensor and the robot controller might have a problem. Or, the network load might be too high to receive the sensor data on time. In that case, arrange the network connection topology to reduce the effect of other network devices on the controller-force sensor communication.
8320154D		X-axis position deviation error in the force control	3	X-axis position exceeded the limit while the force control is ON.	Revise the setting of TCP deviation allowable value.
8320154E		Y-axis position deviation error in the force control	3	Y-axis position exceeded the limit while the force control is ON.	Revise the setting of TCP deviation allowable value.
8320154F		Z-axis position deviation error in the force control	3	Z-axis position exceeded the limit while the force control is ON.	Revise the setting of TCP deviation allowable value.
83201550		Excessive posture error around X-axis in the force control	3	X-axis posture exceeded the limit while the force control is ON.	Revise the setting of TCP deviation allowable value.
83201551		Excessive posture error around Y-axis in the force control	3	Y-axis posture exceeded the limit while the force control is ON.	Revise the setting of TCP deviation allowable value.
83201552		Excessive posture error around Z-axis in the force control	3	Z-axis posture exceeded the limit while the force control is ON.	Revise the setting of TCP deviation allowable value.
81201553		Failed to acquire force control data.	1	The data acquisition command was executed while the force control was deactivated. This command is available only while the force control is activated.	Acquire data while the force control is activated.
83201554		X-axis force limit over in the force control	3	X force exceeded the limit	The force sensor detected the value higher than the rated value. Please check the rated value of the force sensor. Reduce speed, or change operation.
83201555		Y-axis force limit over in the force control	3	Y force exceeded the limit	The force sensor detected the value higher than the rated value. Please check the rated value of the force sensor. Reduce speed, or change operation.

Code	RC7 Code	Message	Level	Description	Remedy
83201556		Z-axis force limit over in the force control	3	Z force exceeded the limit	The force sensor detected the value higher than the rated value. Please check the rated value of the force sensor. Reduce speed, or change operation.
83201557		Moment about X-axis is over the limit in the force control	3	Moment around X-axis exceeded the limit.	The force sensor detected the value higher than the rated value. Please check the rated value of the force sensor. Reduce speed, or change operation.
83201558		Moment about Y-axis is over the limit in the force control	3	Moment around Y-axis exceeded the limit.	The force sensor detected the value higher than the rated value. Please check the rated value of the force sensor. Reduce speed, or change operation.
83201559		Moment about Z-axis is over the limit in the force control	3	Moment around Z-axis exceeded the limit.	The force sensor detected the value higher than the rated value. Please check the rated value of the force sensor. Reduce speed, or change operation.
8320155A		You cannot exectue with Auto-PosClr	3	You cannot exectue it with Auto-PosClr	Revise the setting.
8320155B		You cannot exectue with calibrated kinematics	3	You cannot execute it with calibrated kinematics	Revise the setting.
8220155C		Command position collided with the virtual fence (Manual mode).	2	Collision was detected between the robot command position and equipment data in Manual mode.	Please operate the robot away from the equipment or tools robot. Please operate the robot away from the robot tool. To detect a collision in the virtual fence while robot is out-of-detection area, disable the virtual fence first, and then move the robot to the outside of detection area.
8220155D		Current position collided with the virtual fence (Manual mode).	2	Collision was detected between the current robot position and equipment data in Manual mode.	Please operate the robot away from the equipment or tools robot. Please operate the robot away from the robot tool. To detect a collision in the virtual fence while robot is out-of-detection area, disable the virtual fence first, and then move the robot to the outside of detection area.

Code	RC7 Code	Message	Level	Description	Remedy
8320155E		Command position collided with the virtual fence (Auto mode).	3	Collision was detected between the robot command position and equipment data in Auto mode.	Please operate the robot away from the equipment or tools robot. Please operate the robot away from the robot tool. To detect a collision in the virtual fence while robot is out-of-detection area, disable the virtual fence first, and then move the robot to the outside of detection area.
8420155F		Current position collided with the virtual fence (Auto mode).	4	Collision was detected between the current robot position and equipment data in Auto mode.	Please operate the robot away from the equipment or tools robot. Please operate the robot away from the robot tool. To detect a collision in the virtual fence while robot is out-of-detection area, disable the virtual fence first, and then move the robot to the outside of detection area.
82201560		Target position collided with the virtual fence (Manual mode).	2	Collision was detected between the robot target position and equipment data in Manual mode.	Perform teaching the robot again apart from the equipment.
83201561		Target position collided with the virtual fence (Auto mode).	3	Collision was detected between the robot target position and equipment data in Auto mode.	Perform teaching the robot again apart from the equipment.
83201562		Position command entered the Exclusive area.	3	Detected a position command intrusion in the Exclusive area.	Control all robots so that multiple robots do not enter the same Exclusive area simultaneously. To detect a collision in the Exclusive area while the robot is out-of-detection area, disable the Exclusive area first, and then move the robot to the outside of exclusive area.
84201563		Current position entered the Exclusive area.	4	Detected a position current intrusion in the Exclusive area.	Control all robots so that multiple robots do not enter the same Exclusive area simultaneously. To detect a collision in the Exclusive area while the robot is out-of-detection area, disable the Exclusive area first, and then move the robot to the outside of exclusive area.
80201564		Target position entered the Exclusive area.	0	Detected a target position intrusion in the Exclusive area.	Perform teaching the robot away from the exclusive area.
83201565		Virtual fence monitoring processing delay.	3	Timeout occurred in the virtual fence monitoring process.	Please reduce the number of monitoring model. Please simplify the shape of the monitoring model. Please lower the detection level of the monitoring model.

Code	RC7 Code	Message	Level	Description	Remedy
83201566		Exclusive area monitoring processing delay.	3	Timeout occurred in the exclusive area monitoring process.	Please reduce the number of monitoring model. Please simplify the shape of the monitoring model. Please lower the detection level of the monitoring model.
83201567		Exclusive control wait timeout.	3	Timeout occurred in the exclusive control waiting process.	Please modify the program to avoid the long waiting time.
83201568		Collision monitoring function initialization error.	3	Collision monitoring function initialization error.	Make sure that the monitoring model is set correctly.
83201569		Specified axis deviation is invalid	3	Error allowance setting is out of range.	Confirm the specified error allowance setting.
8320156A		You cannot enable high tracing control	3	High tracing control is not available in the current setting.	Revise the setting.
8320156B		You cannot disable high tracing control	3	High tracing control is not available in the current setting.	Revise the setting.
8320156C		You cannot enable vibration control.	3	Vibration control is not available in the current setting.	Revise the setting.
8320156D		You cannot disable vibration control.	3	Vibration control is not available in the current setting.	Revise the setting.
8320156E		You cannot enable vibration controlM.	3	Vibration controlM is not available in the current setting.	Revise the setting.
8320156F		You cannot disable vibration controlM.	3	Vibration controlM is not available in the current setting.	Revise the setting.
85201570		Failed to initialize force sensor	5	Unexpected Error. Failed to initialize force sensor	Please contact DENSO WAVE service with error number and error message.
83201571		Failed to transfer force sensor data	3	Failed to transfer force sensor data.	Please check EtherCAT connection.
83201572		Command position collided with the virtual fence	3	Collision was detected between the robot command position and equipment data	Please operate the robot away from the equipment or tools robot. Please operate the robot away from the robot tool. To detect a collision in the virtual fence while robot is out-of-detection area, first disable the virtual fence, or use direct mode, and then move the robot to the outside of detection area.

Code	RC7 Code	Message	Level	Description	Remedy
83201573		Current position collided with the virtual fence	3	Collision was detected between the current robot position and equipment data	Please operate the robot away from the equipment or tools robot. Please operate the robot away from the robot tool. To detect a collision in the virtual fence while robot is out-of-detection area, first disable the virtual fence, or use direct mode, and then move the robot to the outside of detection area.
83201574		Target position collided with the virtual fence	3	Collision was detected between the robot target position and equipment data	Perform teaching the robot again apart from the equipment.
83201575		Failed to disable direct mode.	3	You cannot disable direct mode while you move the robot.	Stop robot motions and then try again.
84201576		Collision detected during continue.	4	Collision was detected during continue motion.	The program has been reset. If you execute the program again, it start from top of it.
83201577		Unsupported protocol by the force sensor.	3	Unsupported protocol by the force sensor is set.	Revise the setting.
84201578		Collision detected during circular or spline movement.	4	Motor power was turned OFF and program was reset because the robot detected collision during circular or spline movement.	The program has been reset. If you execute the program again, it start from top of it.
83201579		Force sensor type not supported by cooperative control	3	Force sensor type that is not supported by the cooperative control is set.	Please set an appropriate value for [Force sensor type]. [F2 Arm] – [F2 Force Control] – [F5 sensor] – [F1 Sensor Setting] – [1317 Force sensor type]″
8320157E		Invalid license(Force Sensor Compliance Control and Force Sensor Robust Compliance Control)	3	Tried to use a function without both a force sensor compliance control license and a force sensor robust compliance control license.	Please register a license, when it already has a license. Please contact DENSO WAVE service, when you do not have a license.
8320157F		Invalid license(Force Sensor Robust Compliance Control)	3	Tried to use a function without a force sensor robust compliance control license.	Please register a license, when it already has a license. Please contact DENSO WAVE service, when you do not have a license.

Code	RC7 Code	Message	Level	Description	Remedy
83201580		Target force is uncontrollable.	3	Target Force is lower than contact detect force.	Please refer to contact detect force and contact detect torque ([Arm] – [Force Control] – [Sensor] – [Sensor Setting]) and take the following action. 1.Set the target force over the contact detect force/torque. 2.Set the contact detect force under the target force/torque. Caution:If you do procedure 2, set the contact detect force/torque over the sensor noise.
83201581		You cannot edit TOOL 0.	3	TOOL 0 cannot be edited.	Use Tool number other than 0.
83201582		Specified tool number is invalid.	3	Tool number is out of range.	Confirm the specified tool number.
83201583		Tool definition generation error	3	Unexpected error. Tool definition generation failed in the Easy tool teach.	Please contact DENSO WAVE service with error number and error message.
83201601		You cannot edit WORK 0.	3	WORK 0 cannot be edited.	Use WORK number other than 0.
83201602		Specified work number is invalid.	3	Work number is out of range.	Confirm the specified work number.
83201603		Specified work attribute is invalid.	3	Work attribute is out of range.	Confirm the specified work attribute.
83201604		You cannot edit BASE 0.	3	BASE 0 cannot be edited.	Use BASE number other than 0.
83201605		Specified base number is invalid.	3	Base number is out of range.	Confirm the specified base number.
8120167B		No target workpiece exists on the conveyor	1	This operation is not executable because there is no target work on the conveyor.	Revise the setting.
8320167C		Conveyor does not exist.	3	Conveyor does not exist.	Connect the conveyor to the controller.
8320167D		Failed to communicate to the conveyor	3	Failed to communicate to the conveyor	Confirm the connection between conveyor and controller.
8120167E		Invalid conveyor option	1	Invalid value is specified for conveyor communication parameter.	Please Revise Joint Number or I/O Number.
8120167F		Failed to connect to the conveyor	1	Unexpected error. Failed to connect to the conveyor	Please contact DENSO WAVE service with error number and error message.
83201681		Reporting already started	3	This operation is prohibited while the Report function is running.	Stop report function and then try again.
83201682		Previous command transfer process have not finished	3	Tried to send the next command position before previous command position transfer was not completed.	Please contact DENSO WAVE service with error number and error message.
83201683		Slave controller robot setting is not identical with the master controller robot setting	3	Robot type is different between the robot controller's setting and the actual robot.	Revise the slave controller setting.

Code	RC7 Code	Message	Level	Description	Remedy
83201684		Command position buffer is empty	3	Unexpected error. Failed to send the command position because the internal command buffer is empty.	Please contact DENSO WAVE service with error number and error message.
83201685		You cannot execute a command while motor power is ON	3	This operation is prohibited while the motor power is ON	Turn OFF the motor and try again.
83201686		Turn motor power ON to execute the command.	3	This operation requires Motor-ON state.	Turn ON the motor and try again.
83201687		You cannot execute a command in the machine-lock mode	3	This operation is prohibited in Machine-lock mode.	Release the Machine-lock and then try again.
83201688		You cannot execute a command while the Emergency-stop is ON	3	This operation is prohibited while the Emergency-stop is ON.	Turn OFF the Emergency-stop and then try again.
83201689		Press the deadman switch to execute the command	3	This operation is prohibited while the deadman switch is OFF.	Turn ON the deadman switch and then try again.
8320168a		You cannot execute a command while the Protective-stop signal is ON	3	This operation is prohibited while the Protective-stop is ON.	Turn OFF the Protecitve-stop and then try again.
8320168b		You cannot execute a command while the arm is moving	3	This operation is prohibited while a joint is moving.	Completely stop all joints and then try again.
8320168c		Move at least one joint to execute the command.	3	At least one joint must be moving for this operation.	Move at lease one joint and then try again.
8320168d		You cannot execute this operation while the current limit is enabled	3	This operation is not available while the current limit is ON.	Turn OFF the current limit and then try again.
8420168e		Specified driver connection type is invalid	4	Unexpected error. Failed to connect to the driver module. Specified connection ID is not supported.	Please contact DENSO WAVE service with error number and error message.
8520168f		Specified servo connection option is invalid	5	Unexpected error. Failed to connect to the servo module. Specified connection option is not supported.	Please contact DENSO WAVE service with error number and error message.
83201691		Slave controller robot count have exceeded the maximum.	3	Robot controller registration number exceeded the limit.	No more robot controllers can be registered. Shutdown another controller and then try to register again.
82201692		Failed to connect b-CAP servo	2	Failed to connect to the servo module. b-CAP communication setting might have a problem.	Revise the b-CAP communication setting.
83201693		Motion stop wait timeout.	3	Motion joint stop wait process timeout occurred.	Completely stop all joints and then try again.
82201694		b-CAP servo connection timeout	2	Failed to connect to the servo module. b-CAP communication might be disconnected.	Confirm b-CAP communication is established.

Code	RC7 Code	Message	Level	Description	Remedy
83201695		Failed to execute this operation while a motion command is executed.	3	This operation is prohibited while the motion command is executed.	Wait until the motion comman is completed, and try again.
85201696		Operation was aborted because initialization failed	5	Internal processing stopped because a fatal error occurred.	Check the cause of the fatal error.
83201697		Invalid filter parameter	3	Invalid parameter was set as a filter	The setting parameter might be out of range. Please revise the setting value.
80201698		Change to real environment to execute the command	0	This operation is not supported on simulation environment.	Try on the real controller.
83201699		Encoder hub is not connected	3	Extended-joint is enable, but the encoder hub is not connected.	Turn OFF the robot controller and connect the encoder hub correctly. Then turn ON the robot controller.
8420169a		Servo command buffer full	4	Command data transfer internal buffer overflow occurred.	Please contact DENSO WAVE service with error number and error message.
8020169b		The load on the hand is rising.	0	The load on the hand is rising.	If the load continues to rise, an error may occur. Reduce the continuous operation time of the hand by setting a waiting time, etc. If you use MoveA or MoveR or Unchuck command for gripping work by the gripper, please change program to use gripping motion command.
8420169c		The temperature error due to hand overload.	4	The load on the hand is large and the motor temperature has exceeded the allowable value.	Reduce the continuous operation time of the hand by setting a waiting time, etc. If you use MoveA or MoveR or Unchuck command for gripping work by the gripper, please change program to use gripping motion command.
852016fa	6180	Servo communication error	5	Unexpected error. Communication to servo module might have a problem.	Please contact DENSO WAVE service with error number and error message.
842016fb		Servo error	4	Unexpected error. Error found in the servo module.	Please contact DENSO WAVE service with error number and error message.
832016fc		I/O communication error	3	Unexpected error. Communication to I/O device module might have a problem.	Please contact DENSO WAVE service with error number and error message.
832016fd		I/O error	3	Unexpected error. Error found in I/O device.	Please contact DENSO WAVE service with error number and error message.
822016fe		Controller power is OFF	2	Robot controller power is turned OFF.	Please contact DENSO WAVE service with error number and error message.

Code	RC7 Code	Message	Level	Description	Remedy
832016ff		Regenerative resistor overload	3	Unexpected error. Excessive current flowed through the regeneration resister.	Revise the robot motion.
83201700		You cannot execute the command because enabling condition is not specified.	3	Unexpected error. Enabling condition is not set for the command.	Please contact DENSO WAVE service with error number and error message.
81201701	21D3	You cannot execute a command while an error occurs.	1	Tried to perform an operation that is not allowed while an error occurs on at least one robot.	Clear errors on all robot controllers and then try again.
81201801		Execute the command with deliberate error.	1	This operation requires the condition that an error is occurring.	Intentionally generate an error and then try again.
81201702	600A	You cannot execute a command when the motor power of all robot controllers are ON.	1	Tried to perform an operation that is not allowed while motor power is ON at all robots.	Turn OFF the motor power at least one robot and then try again.
81201802	6006	To execute the command, turn motor power ON of all robot controllers.	1	This operation requires the condition that all motor power is ON at all robots.	Turn ON motor of all robot controllers and then try again.
81201703		You cannot execute a command while an arm is moving.	1	This operation is prohibited while a joint is moving.	Stop all joint motions of all robot controllers and then try again.
81201803		Move at least one joint to execute the command.	1	At least one joint must be moving for this operation.	Move at least one joint and try again.
81201704		You cannot execute a command after the calibration of all joints has been finished with all robot controllers.	1	This operation is prohibited while CALSET is completed on all robots.	Set at least one controller to be CALSET unfinished status and then try again.
81201804		Complete calibration for all joints with all robot controllers before executing the command.	1	This operation requires the condition that CALSET has been completed on all robots.	Finish CALSET on all robot controllers and then try again.
81201705	21DE	You cannot execute a command when all robot controllers are Machine-locked.	1	This operation is not allowed while all robots are machine-locked.	Release the machine-lock at least one robot controller and then try again.
81201805	21DF	Set all robot controllers to the machine-lock mode before command execution.	1	This operation requires the condition that all robots are machine-locked.	Set the machine-lock on all robot controllers and then try again.
81201706	21E2	You cannot execute a command in the Manual mode.	1	This operation is not allowed in the Manual mode.	Change the robot mode other than the Manual mode, and then try again.
81201806	21E3	Change to the Manual mode to execute the command	1	This operation requires the condition that robots are in the Manual mode.	Change the robot mode to the Manual mode, and then try again.

Code	RC7 Code	Message	Level	Description	Remedy
81201707	21E4	You cannot execute the command in the Teach-check mode	1	This operation is not allowed in the Teach-check mode.	Change the robot mode other than the Teach-check mode, and then try again.
81201807	21E5	Change to the Teach-check mode to execute the command	1	This operation requires the condition that the robot is in Teach-check mode.	Change the robot mode to the Teach-check mode, and then try again.
81201708	21E6	You cannot execute the command in the Auto mode	1	This operation is not allowed in the Auto mode.	Change the robot mode other than the Auto mode, and then try again.
81201808	21E7	Change to the Auto mode to execute the command	1	This operation requires the condition that robot is in the Auto mode.	Change the robot mode to the Auto mode, and then try again.
81201709	21EB	You cannot execute the command while the deadman switch is pressed	1	This operation is not allowed while the deadman switch is ON.	Turn OFF the deadman switch, and then try again.
81201809	21EC	Press the deadman switch to execute the command	1	This operation is prohibited while the deadman switch is OFF.	Turn ON the deadman switch, and then try again.
8120170a	2008	You cannot execute the command while the Emergency-stop is ON	1	This operation is prohibited while the Emergency-stop is ON.	Turn OFF the Emergency-stop, and then try again.
8120180a	21ED	Turn ON the Emergency-stop to execute the command	1	This operation is prohibited while the Emergency-stop is OFF.	Turn ON the Emergency-stop, and then try again.
8120170b		You cannot execute the command while the Protective-stop signal is ON	1	This operation is prohibited while the Protective-stop is ON.	Turn OFF the Protecitve-stop, and then try again.
8120180b		Turn ON the Protecitve-stop signal to execute the command	1	This operation is not allowed the Protecitve-stop is OFF.	Turn ON the Protecitve-stop, and then try again.
8120170c	21F2	You cannot execute the command while the Enable-auto signal is ON	1	This operation is not allowed while the Enable-auto is ON.	Turn OFF the Enable-auto, and then try again.
8120180c	21F3	Turn ON the Enable-auto signal to execute the command	1	This operation is not allowed the Enable-auto is OFF.	Turn ON the Enable-auto, and then try again.
8420170d		This operation is available only in the simulation environment.	4	This operation is not allowed in the real controller.	Try on the simulation environment.
8420180d		This operation is available only in the real environment.	4	This operation is not allowed in the simulation.	Try on the real controller.
8120170e		You cannot execute a command after robot calibration completed.	1	This operation is not allowed while CALSET is completed on all robots.	Set at least one controller to be CALSET unfinished status, and then try again.

Code	RC7 Code	Message	Level	Description	Remedy
8120180e		Calibrate the robot before executing the command	1	This operation requires the condition that CALSET is completed on all robots.	Finish CALSET on all robot controllers, and then try again.
81201741		You cannot execute a command while an arm is moving.	1	This operation is prohibited while a joint is moving.	Stop all joint motions and then try again.
81201841		Move at least one joint to execute the command.	1	At least one joint must be moving for this operation.	Move at least one joint and then try again.
81201742	21EE	You cannot execute a command while the arm is suspended.	1	At least one joint must be moving for this operation.	Move at least one joint and then try again.
81201842	21EF	Suspend the arm to execute the command.	1	This operation is prohibited while a joint is moving.	Continue-stop all joints and then try again.
81201743		You cannot execute a command while the arm stops.	1	This operation is not allowed while all joints are stopped.	Move at least one joint and then try again.
81201843		Stop the arm to execute the command.	1	This operation is prohibited while a joint is moving.	Stop all joint motions and then try again.
81201744	600B	You cannot execute a command while the robot is moving.	1	This operation is not allowed while robot joint is moving.	Stop robot joint and then try again.
81201844		Move the robot to execute the command.	1	This operation requires the condition that a robot joint is moving.	Move robot joint and then try again.
81201745		You cannot execute a command while the robot is suspended.	1	This operation is not allowed while robot joint is Continue-stopped.	Completely stop robot joint and then try again.
81201845		Suspend the robot to execute the command.	1	This operation requires the condition that robot joint is Continue-stopped.	Continue-stop robot joint and then try again.
81201746		You cannot execute a command while an extended-joint is moving.	1	This operation is not allowed while the extended-joint is moving.	Stop the extended-joint completely and then try again.
81201846		Move an extended-joint to execute the command.	1	This operation requires the condition that an extended-joint is moving.	Move the extended-joint and then try again.
81201747		You cannot execute a command while an extended-joint is suspended.	1	This operation is not allowed while the extended-joint is Continue-stopped.	Completely stop the extended-joint and then try again.
81201847		Suspend the extended-joint to execute the command	1	This operation requires the extended-joint being Continue-stopped.	Continue-stop the extended-joint and then try again.
81201748	21DE	You cannot execute a command in the machine-lock mode.	1	This operation is prohibited in Machine-lock mode.	Release the machine-lock and then try again.
81201848	21DF	Change to the machine-lock mode to execute the command.	1	This operation requires a robot being machine-locked.	Machine-lock the controller and then try again.

Code	RC7 Code	Message	Level	Description	Remedy
81201749	21D3	You cannot execute a command while error occurs.	1	This operation is not allowed while an error occurs.	Clear errors and then try again.
81201849		Execute the command with a deliberate error.	1	This operation requires the condition that an error is intentionally generated.	Generate any errors intentionally and then try again.
8320174a		You cannot execute a command while motor power is ON	3	This operation is prohibited while the motor power is ON	Turn OFF the motor and then try again.
8220184a		Turn motor power ON to execute the command.	2	This operation requires the motor power ON.	Turn ON the motor and then try again.
8120174b	600A	You cannot execute a command while motor power is ON	1	This operation is prohibited while the motor power is ON	Turn OFF the motor and then try again.
8120184b	6006	Turn motor power ON to execute the command.	1	This operation requires Motor-ON state.	Turn ON the motor and then try again.
8320174c		You cannot execute a command while the motor power is OFF	3	This operation is not allowed while the motor power is OFF.	Turn OFF the motor and then try again.
8220184c		Turn the motor power OFF to execute the command	2	This operation requires the motor power OFF.	Turn OFF motor and then try again.
8120174d		You cannot execute a command after all joint calibration completed.	1	This operation is not allowed when CALSET is completed.	Set the robot to be CALSET unfinished and then try again.
8120184d		Calibrate all joints before executing the command.	1	This operation requires the condition that CALSET is completed.	Finish CALSET and then try again.
8120174e		You cannot execute a command in the Slave mode.	1	This operation is not allowed in the Slave mode.	Turn OFF the Slave mode and then try again.
8120184e		Change to Slave mode to execute the command.	1	This operation requires the condition that the robot is in the Slave mode.	Turn ON the Slave mode and then try again.
8120174f		You cannot execute a command on a slave controller.	1	This operation is not allowed on the Slave controller.	Try on the master controller
8120184f		Command is executable only on a slave controller.	1	This operation is allowed only in the Slave controller.	Try on the slave controller
81201751		You cannot execute a command while TCP is interfering with Area.	1	This operation is not allowed while area is interfering.	Move robot to the outside of interference area and try again.
81201851		Move the robot to the interfering position.	1	This operation requires the condition that an area is intentionally interfered.	Intentionally interferein the detection area, and then try again.
81201752		You cannot execute a command when Variable-move is processing.	1	This operation is not allowed during the variable-move.	Complete the variable-move and then try again.

Code	RC7 Code	Message	Level	Description	Remedy
81201852		Command is executable only when Variable-move is processing.	1	This operation is allowed during the variable-move only.	Try the command during the variable-move.
81201753		You cannot execute a command during Automatic operation.	1	This operation is not allowed while executing the auto-move.	Complete the auto-move and then try again.
81201853		Command is executable during Automatic operation only.	1	This operation is allowed only in the auto-move.	Try the command during the auto-move.
81201754		You cannot execute the command in Manual operation	1	This operation is not allowed during the manual-move.	Complete the manual-move and try again.
81201854		Command is executable only in the Manual operation	1	This operation is allowed only in the manual-move.	Try the command during the manual-move.
81201755		You cannot execute a command after robot calibration completed.	1	This operation is not allowed when CALSET is completed.	Set robot to be CALSET unfinished and try again.
81201855		Calibrate the robot before executing the command.	1	This operation requires the condition that CALSET is completed.	Finish CALSET and then try again.
83201756		You cannot execute a command in the remote servo mode	3	This operation is not allowed on the remote servo mode	Turn OFF the remote servo mode.
82201856		Command is executable only in the remote servo mode	2	This operation is allowed only in the remote servo mode	Turn ON the remote servo mode.
81201757		You cannot execute a command when a collision is detected in the virtual fence.	1	This operation is not allowed while virtual fence is detecting collision.	Move robot to the no collide area and try again.
81201857		Command is executable only when a collision is detected in the virtual fence.	1	This operation is allowed only when a virtual fence is detecting collision.	Move robot to the collide area and try again.
81201758		You cannot execute a command when an intrusion is detected in the Exclusive area.	1	This operation is not allowed while exclusive area is detecting instrusion.	Move robot to the no instrusion area and try again.
81201858		Command is executable only when an intrusion is detected in the Exclusive area.	1	This operation is allowed only when an Exclusive area is detecting instrusion.	Move robot to the instrusion area and try again.
81201759		You cannot execute a command in the JOG mode.	1	This operation is not allowed in the JOG mode.	Turn OFF the JOG mode and then try again.
81201859		Change to JOG mode to execute the command.	1	This operation requires the condition that the robot is in the JOG mode.	Turn ON the JOG mode and then try again.

Code	RC7 Code	Message	Level	Description	Remedy
812017fa		You cannot execute a command while the arm is moving.	1	This operation is not allowed while arm group joint is moving.	Stop the arm group joint completely, and then try again.
812018fa		Move at least one joint to execute the command..	1	This operation requires the condition that at least one arm group joint is moving.	Move at least one joint in arm group, and then try again.
812017fb		You cannot execute a command while the arm is suspended.	1	This operation requires the condition that arm group is moving.	Move the arm group, and then try again.
812018fb		Suspend the arm to execute the command.	1	This operation is not allowed while arm group is moving.	Continue-stop the arm group, and then try again.
812017fc		You cannot execute a command when robot joint-included arm group is running.	1	This operation requires the condition that the robot joint-included arm group stops.	Completely stop the arm group including robot joint, and then try again.
812018fc		Execute the command when the robot joint-included arm group is running.	1	This operation is prohibited when the robot joint-included arm group stops.	Stop the arm group including robot joint, and then try again.
812017fd		You cannot execute a command while the robot joint-included arm group is suspended.	1	This operation is not allowed while arm group including robot joint is Continue-stopped.	Completely stop the arm group including robot joint, and then try again.
812018fd		Suspend the robot joint-included arm group to execute the command.	1	This operation requires the condition that robot joint included arm group is Continue-stopped.	Continue-stop the arm group including robot joint, and then try again.
812017fe		You cannot execute a command while the extended-joint included arm group is moving.	1	This operation requires the condition that the extended-joint-included arm group is moving.	Completely stop the arm group including extended-joint, and then try again.
812018fe		Move the extended-joint included arm group to execute the command	1	This operation is not allowed while arm group including extended-joint is moving.	Move the arm group including extended-joint, and then try again.
812017ff		You cannot execute a command while the extended-joint included arm group is suspended	1	This operation is not allowed while arm group including extended-joint is Continue-stopped.	Completely stop the arm group including extended-joint, and then try again.
812018ff		Suspend the extended-joint included arm group to execute the command	1	This operation requires extended-joint-included arm group is Continue-stopped.	Continue-stop the arm group including extended-joint, and then try again.
83201903		Pose type is invalid	3	Unexpected error. Invalid pose type is specified.	Please contact DENSO WAVE service with error number and error message.

83201a05		Failed to obtain acceleration at inertia identification.	3	Failed to detect acceleration used for inertia identification.	Revise the motor setting and mechanical setting.
83201a06		Failed to obtain the log data.	3	Failed to save data necessary for the auto gain tuning.	Revise the motor maximum speed, acceleration time and rigidity.
83201a07	6003	Tuning data is incorrect. Log acquision time for inertia identification is too short.	3	Failed to save data necessary for the auto gain tuning.	Revise the motor setting and mechanical setting.
83201a08		Tuning data is incorrect. Failed to acquire logs at the Auto-tuning.	3	Failed to save data necessary for the auto gain tuning.	Revise the motor setting and mechanical setting.
83201a09		Settling time is incorrect	3	Could not collect data from the wave form in the auto gain tuning.	Revise the motor setting and mechanical setting.
83201a10		The number of identifications are too many.	3	The number of the inertia identification trial execution exceeded the limit.	Revise the motor setting and mechanical setting.
83201a11		The number of tunings are too many	3	The number of the auto gain tuning execution exceeded the limit.	Revise the motor setting and mechanical setting.
83201a12		Velocity is less than tuning velocity.	3	Motion speed did not reach the auto gain tuning adjustment speed.	Revise the motor setting and mechanical setting.
83201a13		Specified acceleration is invalid	3	Auto gain tuning acceleration setting is invalid.	Revise the maximum rotation speed and acceleration time.
80201a14		Tuning result did not converge	0	Auto gain tuning was predetermined number of times. Tuning is not finished.	Revise the motor setting and mechanical setting.
80201a15		Tuning result did not converge	0	Auto gain tuning was predetermined number of times. Tuning is not finished.	Revise the motor setting and mechanical setting.
80201a16		Tuning result did not converge	0	Auto gain tuning was pedetermined number of times. Tuning is not finished.	Revise the motor setting and mechanical setting.
81201a81		Specified control log number is invalid	1	Tried to access the control log record beyond the available range.	Revise the setting.
85201a82		Memory allocation error	5	Unexpected error. Failed to allocate memory for the control log object.	Please contact DENSO WAVE service with error number and error message.
81201a83		Specified log sampling interval is invalid.	1	Specified control log sampling time is out of range.	Value setting range is 8-22. Revise the setting.
81201a84		Specified logging time is invalid.	1	Specified control log record time is out of range.	Value setting range is 10-240. Revise the setting.

Code	RC7 Code	Message	Level	Description	Remedy
81201a85		Specified acquisition mode is invalid.	1	Unsupported control log acquisition mode was specified.	Revise the setting.
81201a86		Specified logging mode is invalid.	1	Unsupported control log record mode was specified.	Revise the setting.
81201a87		You cannot change the log sampling interval during logging.	1	Log record interval cannot be changed while the control log is recorded.	Stop the control log recording and then try again.
81201a88		You cannot change the log sampling interval during logging.	1	Log record interval cannot be changed while the control log is recorded.	Stop the control log recording and then try again.
81201a89		Specified operation is not executable during logging.	1	Tried to perform an operation that is not allowed while the control log is recorded.	Stop the control log recording and then try again.
81201a8a		Specified log page is invalid	1	Tried to access the control log page beyond the available range.	Revise the setting.
81201b01		Specified servo log number is invalid.	1	Tried to access the servo log record beyond the available range.	Revise the setting.
85201b02		Memory allocation error	5	Unexpected error. Failed to allocate memory for the servo log object.	Please contact DENSO WAVE service with error number and error message.
81201b03		Specified servo log sampling interval is invalid.	1	Specified servo log sampling time is out of range.	Value setting range is 1, 2, 4 or 8. Revise the setting.
81201b04		Specified servo logging time is invalid.	1	Specified servo log record time is out of range.	Value setting range is 10–60. Revise the setting.
81201b05		Specified servo log page is invalid.	1	Tried to access the servo log page beyond the available range.	Revise the setting.
83201b06		You cannot execute this operation while servo log is activated.	3	Tried to execute operation that is prohibited while servo log is activated.	Stop the servo log and then try again.
83201b07		Activate servo log and execute	3	Tried to execute operation that is allowed only while servo log is activated.	Stop the servo log and then try again.
83201b08		Invalid servo log parameter	3	Tried to set invalid servo log parameter.	The setting parameter might be out of range. Please revise the setting value.
81201b09		Tried to access servo log item that is out of ragne	1	Tried to access servo log item that is out of range.	Revise the setting.
83201b81		Two buttons were pushed when joint mode cooperation control.	3	Two buttons were pushed when joint mode cooperation control .	Please push the button one by one.
83201b82		Coordinate control-target joint does not exist.	3	The joint you specified for the Coordinate control target does not exist.	Revise the setting.
